INTRODUCTION

C R. Chappell 1

GLOBAL MODELING OF MAGNETOSPHERIC PLASMA PROCESSES

- The Kinetic Approach in Magnetospheric Plasma Transport Modeling *J. L. Horwitz* 11
- Thermospheric General Circulation and Response to Magnetospheric Forcings *R. G. Roble* 21
- Large-Scale Models of the Ionosphere/Magnetosphere/Solar Wind System—MHD as a Unifying Principle
V. M. Vasyliunas 33
- Field-Aligned Currents and Magnetospheric Convection—A Comparison Between MHD Simulations and Observations *Raymond J. Walker and Tatsuki Ogino* 39
- The Magnetic Mirror Force in Plasma Fluid Models *R. H. Comfort* 51
- Self-Consistent Neutral Point Current and Fields From Single Particle Dynamics *R. F. Martin, Jr.* 55

MODELING OF THE MID-LATITUDE IONOSPHERE AND PLASMASPHERE

- Initial Development of a New Empirical Model of the Earth's Inner Magnetosphere for Density, Temperature, and Composition *D. L. Gallagher and P. D. Craven* 61
- Hydrodynamic Models of the Plasmasphere *P. G. Richards and D. G. Torr* 67
- Plasmasphere and Ring Current Electric Fields Observed by GEOS 2 *R. Schmidt and A. Pedersen* 79
- Refilling of a Plasmaspheric Flux Tube—Microscopic Plasma Processes *N. Singh* 87
- Modeling of the Thermal Plasma in the Outer Plasmasphere—A Magnetospheric Heat Source
M. O. Chandler, J. U. Kozyra, J. L. Horwitz, R. H. Comfort, and L. H. Brace 101
- Preliminary Statistical Survey of Plasmaspheric Ion Properties From Observations by DE 1/RIMS
R. H. Comfort, I. T. Newberry, and C. R. Chappell 107

MODELING OF THE AURORAL ZONE AND BOUNDARY LAYER

- A Model of Auroral Potential Structures Based on Dynamics Explorer Plasma Data *J. L. Burch and C. Gurgiolo* 115
- Internal Shear Layers in Auroral Dynamics *W. Lotko and C. G. Schulz* 121
- Multimoment Fluid Simulations of Transport Processes in the Auroral Zones *P. J. Palmadesso, S. B. Ganguli, and H. G. Mitchell, Jr.* 133
- Auroral Zone Ion Composition *W. K. Peterson* 145
- Kinetic Treatment of Oxygen Conic Formation in the Central Plasma Sheet by Broadband Waves *G. B. Crew and Tom Chang* 159
- Electric Fields and Particle Precipitation During the Substorm of January 18, 1984 *O. de la Beaujardière, D. S. Evans, Y. Kamide, and R. Lepping* 165
- Classical and Anomalous Transport Processes in the Auroral Return Current Region *S. B. Ganguli and P. J. Palmadesso* 171
- Dynamic Evolution of Low-Energy Ions in the Terrestrial Magnetosphere *B. L. Giles, C. R. Chappell, J. H. Waite, Jr., and T. E. Moore, and J. L. Horwitz* 177
- Monte Carlo Modeling of Large-Scale Ion-Conic Generation *J. M. Retterer, T. Chang, G. B. Crew, J. R. Jasperse, and J. D. Winningham* 185

- Polar Cusp Electrodynamics—A Case Study *P. E. Sandholt* 191
- Turbulent Generation of Auroral Currents and Fields—A Spectral Simulation of Two-Dimensional MHD Turbulence *Y. Song and R. L. Lysak*
- Alfvén Ion-Cyclotron Heating of Ionospheric O⁺ Ions *R. M. Winglee, R. D. Sydora, and M. Ashour-Abdalla* 205
- Quantitative Parametrization of Energetic Ionospheric Ion Outflow *A. W. Yau, W. K. Peterson, and E. G. Shelley* 211

MODELING OF THE POLAR MAGNETOSPHERE AND IONOSPHERE

- The Polar Wind *R. W. Schunk* 219
- Vertical Ion Flow in the Polar Ionosphere *A. W. Yau and M. Lockwood* 229
- O⁺ and H⁺ Escape Fluxes From the Polar Regions *A. R. Barakat, R. W. Schunk, T. E. Moore, and J. H. Waite, Jr.* 241
- Open Flux Merging in an Expanding Polar Cap Model *J. J. Moses and G. L. Siscoe* 247

MODELING OF THE PLASMA SHEET AND RING CURRENT

- Large-Scale Instabilities and Dynamics of the Magnetotail Plasma Sheet *J. Birn and K. Schindler* 251
- Dynamics of the Near-Earth Magnetotail—Recent Observations *L. A. Frank* 261
- Plasma Sheet Theories *T. W. Speiser* 277
- Ion-Cyclotron Wave Heating of Heavy Ions in the Equatorial Magnetosphere: A Numerical Simulation Study *M. W. Chen, T. Hada, and M. Ashour-Abdalla* 289
- The Motion of the WTS as a Function of Electron Temperature Anisotropy in the Plasma Sheet *P. L. Rothwell, M.B. Silevitch, and L. P. Block* 297
- A Simulation Study of Broadband Electrostatic Noise in the Presence of Ionospheric Electrons *D. Schriver and M. Ashour-Abdalla* 303
- Consequences of the Duration of Solar Energetic Particle-Associated Magnetic Storms on the Intensity of Geomagnetically Trapped Protons *W. N. Spjeldvik* 311

PROSPECTS FOR SYNTHESIS OF LOCAL MODELS INTO A GLOBAL MAGNETOSPHERIC MODEL

- Magnetohydrodynamic Boundary Conditions for Global Models *T. G. Forbes* 319
- Making Connections Between Global Magnetospheric Models and Simulations of Microscopic Plasma Processes *R. L. Lysak* 329
