

CONTENTS

Introduction	xiii
--------------	------

PART I. Ultraviolet Instrumentation and Related Techniques

I.A Imaging

Deep Photographic Survey from Spacelab	3
<i>R. Barbon, L. Benacchio, F. Bertola, M. Capaccioli, C. B. Cosmovici and P. Maffei</i>	
The Integrated Ultraviolet and X-Ray Astronomy Facility (UTEX) on Spacelab	9
<i>P. L. Bernacca</i>	
Far UV Camera (FAUST)	13
<i>G. Rivière and J.-M. Deharveng</i>	
Far-Ultraviolet Electrographic Cameras for Shuttle Spacelab (Abstract)	17
<i>G. Carruthers</i>	
The Space Telescope	19
<i>C. R. O'Dell</i>	
The Faint Object Camera	25
<i>F. Macchetto</i>	
Image Photon Counting (Abstract)	29
<i>A. Boksenberg</i>	
Calibration of the ST Faint Object Camera	31
<i>D. Malaise and J. Jamar</i>	
A Progress Report on Multi-Anode Microchannel Arrays	43
<i>J. G. Timothy</i>	

I.B Spectroscopy

Trends in Observational UV Stellar Spectroscopy <i>R. Hoekstra</i>	47
Techniques for Ultraviolet Astrophysical Studies from Space Vehicles <i>H. W. Moos, W. G. Fastie and A. F. Davidsen</i>	53
The Faint Object Telescope <i>A. F. Davidsen, W. G. Fastie and G. F. Hartig</i>	57
Use of Echelle and SEC-Vidicon for Balloon UV Spectroscopy (BUSS Project) <i>T. M. Kamperman</i>	61
The International Ultraviolet Explorer (IUE) (Abstract) <i>R. Wilson</i>	69
The Faint Object Spectrograph for Space Telescope <i>R. W. Noyes</i>	71
The UCSD Digicon (Abstract) <i>E. A. Beaver, R. Harms and C. E. McIlwain</i>	75
Instrumentation for Extreme Ultraviolet Astronomy <i>F. Paresce, S. Bowyer, W. Cash, M. Lampton and R. Malina</i>	77
Applications of a New High Spatial and Spectral Resolution Spectrograph Design Principle to Solar and Stellar Ultraviolet Spectroscopy <i>J.-D. F. Bartoe and G. E. Brueckner</i>	81
Solar Ultraviolet Doppler Camera <i>E. C. Bruner and R. M. Bonnet</i>	85
The Lyman Alpha Coronagraph <i>J. L. Kohl, E. M. Reeves and B. Kirkham</i>	91
The XUV Spectroheliometer on SMM <i>E. M. Reeves and M. V. Zombeck</i>	95

PART II. X-Ray Instrumentation and Related Techniques**II.A. Non Imaging and Related Instrumentation and Techniques**

HEAO-A

<i>H. Friedman</i>	101
--------------------	-----

The Development of a Gas Scintillation Proportional Counter for the First Spacelab Mission	115
-----------------------------------------------------------------------------------------------	-----

<i>A. Peacock, R. D. Andresen, E.-A. Leimann and B. G. Taylor</i>	
-----------------------------------------------------------------------	--

Solar X-Ray Spectroscopy with a Bent Crystal Spectrometer (BCS)	121
-----------------------------------------------------------------	-----

<i>C. G. Rapley, J. L. Culhane, L. W. Acton, R. C. Catura, E. C. Joki and J. C. Bakke</i>	
-----------------------------------------------------------------------------------------------	--

The OSO-8 Mosaic Graphite Stellar X-Ray Polarimeter	127
-----------------------------------------------------	-----

<i>R. Novick, M. C. Weisskopf, E. H. Silver, H. L. Kestenbaum, K. S. Long and R. S. Wolff</i>	
---------------------------------------------------------------------------------------------------	--

Polarimeter for Investigation of the X-Ray Emission of Solar Flares	131
------------------------------------------------------------------------	-----

<i>I. P. Tindo and B. V. Somov</i>	
------------------------------------	--

Recent Developments in Low and Medium Energy Gamma Ray Instrumentation	151
---------------------------------------------------------------------------	-----

<i>G. Vedrenne</i>	
--------------------	--

A Hard X-Ray Experiment for Long-Duration Balloon Flights	169
-----------------------------------------------------------	-----

<i>W. N. Johnson, J. D. Kurfess and D. M. Saulnier</i>	
--------------------------------------------------------	--

A Large-Area Focusing Gas Scintillation Proportional Counter for Use in X-Ray Astronomy	173
--------------------------------------------------------------------------------------------	-----

<i>D. F. Anderson, D. D. Mitchell, R. Novick and R. S. Wolff</i>	
------------------------------------------------------------------	--

II.B. Imaging and Related Instrumentation Techniques

Solar X-Ray Imaging Techniques, Past and Future	177
-------------------------------------------------	-----

<i>G. S. Vaiana</i>	
---------------------	--

The HEAO-B X-Ray Observatory	189
------------------------------	-----

<i>E. J. Schreier</i>	
-----------------------	--

Position Sensitive Detectors in X-Ray Astronomy	217
<i>P. W. Sanford</i>	
A Position Sensitive Proportional Counter to Use in X-Ray Stay Monitors (Abstract)	235
<i>P. C. Agrawal, S. V. Damle, R. U. Kundapurkar, B. V. Sreekantan and L. M. G. Sundarani</i>	
The LAMAR X-Ray Astronomy Facility for Observations of Very High Sensitivity	237
<i>P. Gorenstein</i>	
An Imaging Soft X-Ray Telescope for Spacelab	247
<i>R. C. Catura, J. L. Culhane, C. DeJager, G. P. Garmire and R. Novick</i>	
X-Ray Optical Properties of a Wolter Type I Telescope for Rocket Application	251
<i>H. Brattinger, R. Lenzen and J. Trumper</i>	
X-Ray Transmission Gratings	257
<i>J. H. Dijkstra, L. J. Lantwaard and C. Timmerman</i>	
Experimental and Theoretical Properties of X-Ray Transmission Gratings	265
<i>K. Beuermann, H. Brattinger and J. Trumper</i>	
A Focussing Iron Line Crystal Spectrometer for Spacelab	271
<i>R. C. Catura, J. L. Culhane, A. H. Gabriel, C. G. Rapley, A. B. C. Walker, Jr. and B. E. Woodgate</i>	
Soft X-Ray Scattering from Highly Polished Surfaces (Abstract)	275
<i>P. A. J. de Korte and R. Laine</i>	
Modulation Collimator as an Imaging Device	277
<i>K. Makishima, S. Miyamoto, T. Murakami, J. Nishimura, M. Oda, Y. Ogawara and Y. Tawara</i>	
X-Ray Imaging Scintillation Detectors	291
<i>R. G. Cruddace, G. Fritz, M. Levi and S. Shulman</i>	
Solar Maximum Mission (Abstract)	295
<i>H. F. Van Beek</i>	

A Grid Telescope for Imaging Hard X-Rays <i>H. S. Hudson, G. J. Hurford, L. E. Peterson and H. F. van Beek</i>	297
A Hard X-Ray Camera for the Study of Gamma-Ray Burst Sources <i>V. S. Iyengar, T. M. K. Marar, K. Kasturirangan and U. R. Rao</i>	305
The MPI-Imaging Double Compton Telescope for Balloon Observations of MeV Gamma Radiation <i>F. Graml, F.-P. Penningsfeld and V. Schönfelder</i>	309
Superconducting Superheated Granules as X-Ray and γ -Ray Imaging Detectors <i>C. Valette and G. Waysand</i>	313
PART III. Miscellaneous Instrumentation	
The ASTRO-7 Zodiacal Light UV Polychromator and Its Absolute Radiometric Calibration (Abstract) <i>E. Pitz, C. Leinert, Z. Schulz and H. Link</i>	319
Detectors for <i>in situ</i> Measurements of Cosmic Dust (Abstract) <i>J. Kissel</i>	321
Performance of an Impact Ionisation Mass Spectrometer for Interplanetary Dust (Abstract) <i>B. K. Dalmann and J. Kissel</i>	323
The Spacelab Instrument Pointing Subsystem (IPS) and Its Utilization <i>J. C. Jones</i>	325
Symposium Program	331
Author Index	335
Subject Index	337
