

CONTENTS

Preface	v
Atmospheric structure between 30 and 120 km, D. Fedele and A. Zanca	1
Experimental methods in exploring the atmosphere between 30 km and 120 km, D. Fedele	34
Effects of solar radiation in the lower atmosphere, Barbara Kriester	52
Stratospheric warmings, Barbara Kriester	81
Relations between stratosphere and mesosphere, A. H. Shapley	123
D-region phenomena associated with meteorological influences, W. Dieminger	143
Structure of the D-region from partial radio reflection observations, W. Dieminger	178
Mesures de vents par météores entre 80 et 110 km, A. Spizzichino	201
First general discussion on motions in the upper atmosphere	237
A simple description of ionospheric drifts in the E region as obtained by the fading method at Breisach, E. Harnischmacher and K. Rawer	242
Results of an experiment concerning the fading pattern, E. Harnischmacher	277
The general nature of acoustic-gravity waves, J. C. Gille	298
Acoustic-gravity wave ducting in the atmosphere by vertical temperature, J. C. Gille	322
Gravity waves in the presence of wind shears and dissipative processes, C. O. Hines	356
Applications of gravity-wave theory to upper atmospheric studies, C. O. Hines	364
The general theory of turbulence; turbulence in the atmosphere, R. Bolgiano Jr.	371
Différent aspects de la turbulence, P. Misme	401
Second general discussion on turbulence and waves	414
