

CONTENTS

PUBLISHER'S NOTE	v
----------------------------	---

LIST OF CONTRIBUTORS	vii
--------------------------------	-----

Chapter 1 – THE RADIATION EMITTED BY THE SUN

1. Limits of the solar spectrum	1
2. Comparison of solar and black-body radiation	4
3. The temperature of the solar disc	12
4. The solar constant	15
5. Total energy emitted by the sun	23
6. Recent theories of the source of solar energy	23
References	26

Chapter 2 – THE ASTRONOMICAL AND GEOGRAPHICAL FACTORS AFFECTING THE AMOUNT OF SOLAR RADIATION REACHING THE EARTH

1. The sun–earth distance	29
2. Coordinate systems of the sun as a celestial body	31
3. Computation of insolation on different planes at the earth's surface	34
4. Heliographic coordinates	41
5. Time and its units	44
References	46

Chapter 3 – THE EFFECT OF THE ATMOSPHERE ON SOLAR RADIATION REACHING THE EARTH

1. Introduction	47
2. Path length in the atmosphere	48
3. Scattering	53
4. Absorption in the ultraviolet	66
5. Formation of ionospheric and ozone layers.	75
6. Absorption in the infrared	79
7. Atmospheric turbidity	94
References	107

*Chapter 4 – DIRECT AND SCATTERED RADIATION REACHING THE EARTH, AS INFLUENCED
BY ATMOSPHERIC, GEOGRAPHICAL AND ASTRONOMICAL FACTORS*

1. Introduction	111
<i>Astronomical factors, 111 – Geographical factors, 112 – Geometrical factors, 112 – Physical factors, 112 – Meteorological factors, 112</i>	
2. Clear sky conditions	113
3. Total radiation falling on a tilted plane	120
4. The influence of atmospheric ozone on global radiation	124
5. The influence of clouds on global radiation.	125
6. Radiation falling on a tilted plane in cloudy weather	130
7. Examples	132
8. Appendix	148
<i>Diagram 4.1. Solar elevation and related units, 148 – Diagram 4.2. Direct solar radiation as a function of atmospheric turbidity, 150 – Diagram 4.3. Diffuse sky radiation above ground having albedo $A = 0.25$ as a function of air mass m_r and turbidity B, 154 – Diagram 4.4. Diffuse sky radiation above ground with albedo $A \neq 0.25$, 156 – Tables 4.17–4.19, Daily sums of global radiation G at low latitudes, 157</i>	
References	159

*Chapter 5 – THE ENERGY DISTRIBUTION IN THE SPECTRUM OF DIRECT AND SCATTERED
RADIATION REACHING THE EARTH*

1. The energy distribution of direct solar radiation (I-radiation)	161
2. The energy distribution of scattered sky radiation (D-radiation).	166
3. Spectra of various zones of the sky and of the entire hemisphere	168
4. The energy distribution of combined solar and sky radiation (G-radiation)	173
5. The ultraviolet region 2800–3800 Å	173
<i>Ultraviolet I-radiation, 174 – Ultraviolet D-radiation, 178 – Ultraviolet G-radiation, 179 – The ultraviolet region 3150–3800 Å, 182 – The ultraviolet region 2800–3150 Å, 187</i>	
6. The visible region 3800–7800 Å	192
7. The spectral region 7800–14,000 Å	194
References	194

Chapter 6 – RADIATION BALANCE IN THE SYSTEM EARTH'S SURFACE–ATMOSPHERE

1. Introduction	196
2. The components of the radiation balance	196
3. The effect of the albedo on the radiation balance.	198
4. The effect of the spectral composition of the incident radiation on the albedo	205
5. Diurnal variation of the radiation balance and its components	206
6. Seasonal variation of the radiation balance and its geographical distribution.	208

7. The radiation balance of the atmosphere	210
8. The albedo of clouds	212
9. The spectral albedo of the earth and atmosphere	213
10. The spectral albedo of the clouds	215
11. The seasonal variation and the geographical distribution of the mean albedo of the earth and its components	216
12. Seasonal variation in the radiation balance of the system earth's surface-atmosphere and its components	218
References	221

Chapter 7 – INSTRUMENTS AND EXPERIMENTAL METHODS

1. Introduction	222
2. Standard instruments	224
<i>The water-flow pyrheliometer of the Smithsonian Institution, 224 – The water-stir pyrheliometer, 225 – The Potsdam absolute pyrheliometer, 226</i>	
3. Sub-standard instruments	226
<i>The silver disc pyrheliometer, 226 – The Ångström compensation pyrheliometer, 229 – The Smithsonian version of the Ångström pyrheliometer, 232</i>	
4. Pyrheliometric scales	233
5. Instruments for the measurement of direct solar radiation: pyrheliometers	234
<i>Pyrheliometers with circular receivers and cylindrical tubes, 234 – Pyrheliometers with rectangular entrance apertures and receivers, 236 – Distribution of radiation on the receiver surface, 236 – Frequently employed pyrheliometers, 237 – Michelson's bimetallic pyrheliometer, 237 – Improved Michelson pyrheliometers, 238 – The Armour–Linke–Feussner pyrheliometer, 240 – The Moll–Gorczynski pyrheliometer, 242 – The Eppley pyrheliometer, 242 – The Savinov–Yanishkevskiy pyrheliometer, 244 – Auxiliary apparatus used with pyrheliometers, 247</i>	
6. Instruments for the measurement of global radiation: pyranometers and pyranographs	247
<i>The Robitzsch pyranometer, 248 – The Fuess pyranometer, 249 – The Casella pyranometer, 252 – The SIAP pyranometer, 255 – The Moll–Gorczynski pyranometer, 255 – The Eppley pyranometer, 263 – The 'Star' pyranometer (solarimeter), 266</i>	
7. Instruments for the measurement of sky radiation	268
8. Calibration of solar radiation instruments	271
9. Distillation instruments	272
<i>The Bellani spherical pyranometer, 272 – Distillation instruments with flat receivers, 275</i>	
10. Measurement of the duration of sunshine	276
<i>The Campbell–Stokes sunshine recorder, 276 – The Martin–Marvin thermoelectric sunshine recorder, 279 – Photoelectric sunshine recorder, 279 – Sunshine duration and insolation, 279</i>	

11. Measurement of solar radiation within limited spectral regions 282
Spectrographs and monochromators, 282 – Filters, 283 – The use of filters in solar radiation measurements, 288 – Spectrally selective receivers, 290 – Ultraviolet measurements, 295 – Measurements in the visible range, 299 – Infrared measurements, 301

12. Albedometers 302

13. Long-wave radiometers and balance meters 303
Balance meter, Davos model, 305 – Net exchange radiometer and total hemispherical radiometer, 306 – The Hamburg–Lupolen instrument, 308

14. Instruments for the determination of turbidity and the amount of precipitable water in the atmosphere 310
 References 312

Chapter 8 – THE APPLICATION OF SOLAR ENERGY

1. Conversion into heat 317
Low temperature devices without optical concentration: flat plate collectors, 317 – Solar water heaters, 318 – Concentrators, 328 – Concentrators for medium temperatures, 330 – Concentrators for high temperatures: solar furnaces, 333

2. Direct conversion into electrical energy 335
Semiconductors, 335 – p–n Junctions, 337 – The p–n junction as a power generator, 338 – The solar cell, 338 – Efficiency of conversion, 340
 References 342
