

CONTENTS

INTRODUCTION TO THE SECOND EDITION	ix
1. PRINCIPAL RESULTS OF OBSERVATION OF THE SOLAR CORONA	
1 Results from Photometric Observations of the Solar Corona	1
2 On the Mechanism of the Coronal Radiation	18
3 Polarization of the Coronal Radiation	27
4 Principal Results of the Investigation of the Continuous Coronal Spectrum during Eclipse Observations	33
5 Emission and Absorption Lines in the Coronal Spectrum	48
6 Initial Out-of-eclipse Observations of the Solar Corona	60
7 Further Results from Out-of-eclipse Observations of the Corona	70
2. NATURE OF THE EMISSION AND ABSORPTION LINES IN THE SPECTRUM OF THE SOLAR CORONA	
8 Identification of the Coronal Lines	105
9 The Transition Probabilities of the Coronal Lines	116
10 The Difficulty of Explaining the Fraunhofer Component of the Coronal Spectrum	123
11 The Nature of the Fraunhofer Component of the Coronal Spectrum	128
3. QUANTITATIVE CHEMICAL ANALYSIS OF THE SOLAR CORONA	
12 The Calculation of the Concentration of Coronal Ions in Excited States from the Intensities of Coronal Lines	145
13 On the Excitation of the Ground States of Coronal Ions. Theory of the Relative Intensities of the Coronal Lines	154
14 The Lines of Ca XV in the Coronal Spectrum	172
15 The Problem of the Non-appearance of the Balmer Series in the Corona	183
4. THE PROBLEM OF IONIZATION IN THE SOLAR CORONA	
16 The Deviation from Thermodynamic Equilibrium in the Upper Layers of the Solar Atmosphere	189
17 General Remarks about the Ionization Equation for Systems not in Thermodynamic Equilibrium	197
18 Ionization of Hydrogen and Heavy Elements in the Corona	202
19 Comparison of the Theory of Ionization in the Corona with the Observational Results	219

5. THE ULTRAVIOLET RADIATION OF THE SUN AND ITS INFLUENCE ON THE TERRESTRIAL ATMOSPHERE

20	General Remarks	229
21	The Ultraviolet Radiation of the Corona	232
22	Survey of the Results from Observations of the Solar Ultraviolet and Soft X-Ray Radiation	252
23	The Influence of the Hard Solar Radiation on the Ionization of the Earth's Atmosphere	276

6. RADIO-EMISSION OF THE SUN

24	General Remarks on Radio Astronomy	283
25	A Short Survey of Experimental Possibilities	286
26	The Basic Theory of the Absorption Coefficient for Radio Waves in Ionized Gases	301
27	The Thermal Radio Emission of the Sun	311
28	On the Sporadic Radio Emission of the Sun	346
29	Further Observational Results on the Sporadic Radio Emission from the Sun	357

7. ON THE THEORY OF THE SOLAR CORONA

30	Some General Questions on the Theory of the Solar Corona	377
31	On the Heating Mechanism of the Corona	388
32	On Coronal Structure	400
33	The Solar Corona and the Prominences	411

8. THE SOLAR CORONA AND THE INTER PLANETARY GAS

34	Results from Optical Investigations of the Outermost Layers of the Solar Corona	419
35	Radio Observations of the Super Corona	427
36	The Interplanetary Gas	437
37	The Nature of the Interplanetary Gas	448
	REFERENCES	457
	AUTHOR INDEX	467
	SUBJECT INDEX	471
