

VOLUME II: MAGNETOSPHERES

Introduction	v
Contents	ix
II.1 J. Roederer <i>Earth's magnetosphere: Global problems in magnetospheric plasma physics</i>	1
II.2 P.M. Banks <i>Magnetosphere, ionosphere and atmosphere interactions</i>	57
II.3 C.F. Kennel and F.V. Coroniti <i>Jupiter's magnetosphere and radiation belts</i>	105
II.4 N.F. Ness <i>The magnetosphere of Mercury</i>	183

II.5	C.T. Russell <i>The interaction of the solar wind with Mars, Venus and Mercury</i>	207
II.6	J.C. Brandt and D.A. Mendis <i>The interaction of the solar wind with comets</i>	253
II.7	F.H. Busse <i>Theory of planetary dynamos</i>	293
II.8	G.L. Siscoe <i>Towards a comparative theory of magnetospheres</i>	319
	Author index	xi
	Subject index	xxix

EDDIES AND PLASMA DRIFTS

Contents

1. Introduction	3
2. General characteristics of magnetospheric field configuration	6
3. Effect of the interplanetary magnetic field on topography, topology and stability of the magnetospheric boundary	9
4. The mechanisms for the entry of solar wind plasma into the magnetosphere	16
5. Plasma storage, acceleration and release mechanisms in the magnetospheric tail	27
6. Magnetic-field-aligned currents and magnetosphere–ionosphere interactions	39
7. Magnetospheric research in coming years	47
Notes added in proof	49
References	49

Contents

1. Introduction	59
1.1. Magnetosphere	59
1.2. Ionosphere	62
1.3. Atmosphere	67
2. Electrodynamical coupling phenomena	69
2.1. Discussion of the basic model	77
2.2. Electrodynamical phenomena	80
2.3. Dynamo couplings	81
2.4. Auroral couplings	82
3. Thermal plasma couplings	83
3.1. The plasmasphere	88
3.2. The polar wind regions	88
3.3. Plasma flow theory	90
3.4. Ionospheric structure	91
3.5. Plasmapause structure	94
4. Hot plasma couplings	96
4.1. The ring current	96
4.2. Energetic ions	99
5. Conclusions	99
References	100

Contents

1. Introduction	107
2. The Pioneer 10 and 11 magnetospheric experiments: an overview	110
2.1. On board experiments	110
2.2. Trajectories	111
2.3. A general view of Jupiter's magnetosphere	111
3. Radiation belts	116
3.1. Pre-Pioneer 10 theoretical models	117
3.2. Pioneer 10 and 11 radiation belt data	121
3.3. Whistler stably trapped limit	127
3.4. Discussion	128
4. Pioneer observations of Jupiter's middle and outer magnetosphere	130
4.1. Pioneer 10 outbound	130
4.2. Pioneer 11 outbound	136
4.3. Pioneer 10 and 11 inbound	137
4.4. Possible cause of time variability in Jupiter's magnetosphere	143
4.5. Signature of middle magnetosphere	143
4.6. Jupiter as a cosmic ray source	145
4.7. Summary	148
5. Models of Jupiter's outer magnetosphere	148
5.1. Earthlike models of Jupiter's magnetosphere	149
5.2. Corotation and plasmapause	153
5.3. Interaction of the magnetosphere with the ionosphere and atmosphere of Jupiter	154
5.4. Quasi-static disk model of the Jovian magnetosphere	157
5.5. Jovian plasma sources	159
5.6. Radial outflow models	165
6. Summary and discussion	171
References	173

Contents

1. Introduction	185
2. Experiments	186
3. Mercury I encounter	187
4. Mercury III encounter	195
5. Magnetosphere models	200
6. Magnetic tail and polar cap	203
7. Summary and future problems	204
References	205

Contents

1. Introduction	209
2. Mars	209
2.1. Mariner 4	210
2.2. Mars 2 and 3	213
2.3. Mars 5	216
3. Venus	220
3.1. Mariner 2	221
3.2. Mariner 5	221
3.3. Venera 4 and 6	224
3.4. Mariner 10	228
3.5. Venera 9 and 10	228
4. Mercury	233
5. Magnetospheric hierarchy	236
5.1. Magnetic moment	236
5.2. Bow shock location and shape	238
5.3. Magnetospheric dynamics	243
5.4. Night ionosphere	243
6. Summary and conclusions	246
References	247

Contents

1. Overview	255
2. Continuum description of the interaction	257
3. Cometary plasma	261
3.1. Ion species	261
3.2. Production zone	261
3.3. Theories	262
4. Generation of tail streamers	264
4.1. Observations	264
4.2. Theories	267
4.3. Consequences of the hydromagnetic model	268
5. Gross tail structure	270
6. Fine structure in the plasma tail	276
6.1. Observations	276
6.2. Acceleration processes	280
6.3. Bulk motion versus wave motion	282
6.4. Formation of the fine structure	283
7. The problem of anomalous comets	284
8. Epilogue	288
Note added in proof	288
References	289

Contents

1. Introduction	295
2. Hydrodynamics of planetary cores	297
2.1. The physical state of planetary cores	297
2.2. Motions induced by precession	298
2.3. Convection	299
3. An outline of dynamo theory	302
3.1. The dynamo equation	302
3.2. Negative theorems	303
3.3. Simple dynamos	304
4. Planetary dynamos	306
4.1. Historical developments	306
4.2. Models of planetary dynamos	307
4.3. Magnetic equilibration	308
4.4. Scaling laws	309
4.5. Secular variation	313
5. Conclusion	313
References	314

Contents

1. The contemporary basis for a comparative theory of magnetospheres	321
2. An overview of the present state of knowledge of planetary magnetospheres	322
3. Independent variables affecting planetary magnetospheres	331
4. Dependent magnetospheric variables – external	345
5. Dependent magnetospheric variables – boundary and internal	349
5.1. Introduction	349
5.2. Solar wind features and processes	350
5.3. Planetary ionosphere source – features and processes	364
5.4. Satellite sources – features and processes	377
5.5. Interstellar medium source – features and processes	381
6. Long-term aspects	386
6.1. Introduction	386
6.2. Time variations of the independent variables	387
References	394
