

## VOLUME III: SOLAR SYSTEM PLASMA PROCESSES

Introduction	v
Contents	ix
<b>Section 1: Solar system plasma processes</b>	
III.1.1 E.W. Greenstadt and R.W. Fredricks <i>Shock systems in collisionless space plasmas</i>	3
III.1.2 B.U.Ö. Sonnerup <i>Magnetic field reconnection</i>	45
III.1.3 L.J. Lanzerotti and D.J. Southwood <i>Hydromagnetic waves</i>	109
III.1.4 L.R. Lyons <i>Plasma processes in the earth's radiation belts</i>	137
III.1.5 J.M. Cornwall and M. Schulz <i>Physics of heavy ions in the magnetosphere</i>	165
III.1.6 S.D. Shawhan <i>Magnetospheric plasma waves</i>	211
III.1.7 D.T. Farley <i>The ionospheric plasma</i>	271
III.1.8 F.W. Perkins <i>Understanding plasma instabilities in space: Ionospheric research and communications applications</i>	299
<b>Section 2: Technological impact of solar system plasma physics</b>	
III.2.1 L.J. Lanzerotti (ed.) <i>Impacts of ionospheric/magnetospheric processes on terrestrial science and technology</i>	317
III.2.2 P.A. Sturrock <i>Impacts of solar system environment on man, and man on the environment</i>	365
Epilogue E.N. Parker	373
Author index	xi
Subject index	xxix

## Contents

1. Introduction	5
2. Brief history of collisionless shock experience	7
3. Earth's bow shock system	10
3.1. Shock macrostructure	10
3.2. General scheme	14
3.3. Microturbulence	14
3.4. Foreshock	19
3.5. Magnetosheath	24
4. Planetary shocks	25
5. Astrogenic shocks	27
6. Discussion	28
6.1. Recent status of theory	28
6.2. Shock parameters in the solar system	30
6.3. A contemporary view of the multilocal approach to observations by spacecraft	32
7. Recommendations	38
References	39

# Contents

1. Introduction	47
2. Plane steady-state reconnection: a qualitative picture	52
2.1. Flux transport	53
2.2. External plasma dynamics	53
2.3. Region near the magnetic null	56
2.4. Energy conversion	58
3. Flux transfer in time-dependent and three-dimensional configurations	60
3.1. Plane time-dependent geometry	60
3.2. Steady three-dimensional geometry	62
3.3. Time-dependent three-dimensional geometry	64
3.4. Definitions	66
4. The convection region	67
4.1. Two incompressible symmetric flow models	68
4.2. Compressible symmetric models	70
4.3. Asymmetric models	74
4.4. Reconnecting fields forming an arbitrary angle	76
4.5. Collisionless model	78
5. Fluid description of the diffusion region	79
5.1. One-fluid models	79
5.2. Two-fluid effects: electron scale lengths	82
5.3. Two-fluid effects: ion scale lengths	84
6. Non-fluid effects in the diffusion region	87
6.1. Inertial resistivity	87
6.2. Plasma turbulence	91
6.3. Onset of rapid reconnection	93
6.4. Particle acceleration	95
7. Magnetospheric evidence	97
7.1. Flux transfer evidence	97
7.2. Measurements near reconnection sites	99
8. Summary and recommendations	100
Note added in proof	102
References	102

## Contents

1. Introduction	111
2. Theoretical background	114
3. Observational background	115
4. Wave localization and wave modes	117
5. The ionosphere and the atmosphere and boundary conditions	122
6. Waves in hot plasma	126
7. Particle flux oscillations	128
8. Concluding remarks	130
References	131

## Contents

1. Introduction	139
2. General comments on particle diffusion from resonant wave–particle interactions	142
3. Plasma processes and comparisons with observations	145
3.1. Quiet-time electrons	145
3.2. Quiet-time ions	149
3.3. Decay of stormtime ring current ions	151
3.3.1. Interaction with ion-cyclotron waves	153
3.3.2. Inconsistency with proton charge exchange	157
4. Summary and future directions	159
References	161

## Contents

1. Introduction	167
2. Auroral magnetospheric coupling and the O <sup>+</sup> problem	168
3. Heavy ions as probes for magnetospheric processes	175
4. Multi-ion plasma physics	185
5. Active plasma-injection experiments	190
6. Heavy-ion physics at Jupiter	196
7. The future of magnetospheric heavy-ion physics	199
References	203

## Contents

1. Introduction	213
2. The menagerie of plasma waves	214
2.1. Brief history of observations	214
2.2. Locations and characteristics	217
3. Generation, propagation and interaction of plasma waves	223
3.1. Characteristic plasma wave frequencies	224
3.2. Generation mechanisms	226
3.3. Wave propagation characteristics	232
3.4. Consequences of wave–particle interactions	234
4. Diagnostics with plasma waves	236
4.1. Plasma parameters	236
4.2. Plasma processes	238
4.3. Plasma waves associated with auroral particle acceleration	241
5. Plasma waves in other magnetospheres and cosmic systems	245
5.1. Jupiter	245
5.2. Other planets	252
5.3. Cosmic systems	255
6. Recommendations for continued plasma wave research	258
6.1. Recent major advances	258
6.2. Significant research problems	259
6.3. Future direction	262
7. Conclusion	265
References	265

## Contents

1. Introduction	273
2. Incoherent scatter	274
3. E region electrojet plasma instabilities	279
3.1. Equator	280
3.2. Auroral zone	287
4. Equatorial F region instabilities	288
5. Other topics	294
6. Summary	295
References	296

## Contents

1. Introduction	301
2. A computational framework for understanding space plasmas	301
3. The impact of space plasma physics	303
4. Understanding of the ionosphere	303
4.1. Ionospheric equilibria	304
4.2. Stability of the ionosphere	305
4.3. Nonlinear saturation of instabilities	306
4.4. Influence of instabilities on large-scale phenomena	307
4.5. Increasing our understanding of ionospheric instabilities	307
5. The equatorial ionosphere — a major success	308
6. Active ionospheric experiments	309
7. Communications applications of ionospheric instabilities	309
8. Summary	310
References	310

## Contents

1. Introduction		
2. Scintillation of communication satellite signals at GHz frequencies	R.R. Taur	319
3. Magnetic storms and cable communications	C.W. Anderson	323
4. Magnetosphere impacts on ground-based power systems	D.J. Williams	327
5. The space radiation environment: effects on space systems	G.A. Paulikas	330
6. Electrostatic charging on spacecraft	S.E. De Forest	336
7. Space power systems: ionospheric impacts	B.K. Ching	339
8. Deep earth induction studies making use of magnetospheric-ionospheric current systems	D.I. Gough	344
9. Considerations of telluric current effects on pipelines	A.W. Peabody	349
9.1. Pipelines at middle to low latitudes	W.H. Campbell	352
9.2. The Alaskan pipeline	M.S. Reford	356
10. Problems of magnetic fluctuations in geophysical exploration
