

Table of Contents

PREFACE	vii
CHAPTER 1 / THE PRESENT STATE OF THE SOLAR PROBLEM	1
1.1. Observed phenomena and the energetics of solar flares	1
1.2. Physical concepts of the nature of flares	13
1.3. Flare-induced physical processes in the solar atmosphere	35
1.4. The solar flare problem	44
CHAPTER 2 / CHROMOSPHERIC HEATING: THE MECHANISM PRODUCING HIGH-TEMPERATURE PLASMA IN SOLAR FLARES	49
2.1. Impulsive heating by accelerated electrons	49
2.2. Impulsive heating by intense heat flows	87
2.3. Chromospheric heating by X-ray emission	109
CHAPTER 3 / MAGNETIC RECONNECTION AND ENERGY RELEASE IN SOLAR FLARES	115
3.1. Reconnection as a heating mechanism for X-ray coronal loops	115
3.2. The natural high-temperature turbulent current sheet	134
3.3. The high-temperature turbulent current sheet with a small transverse magnetic field	156
3.4. The current sheet structure under the fast and slow reconnection regimes	185
3.5. Stabilization of tearing instability in current sheets on the Sun	201
3.6. The effect of the longitudinal magnetic field in the current sheets on the Sun	206
CONCLUSION	219
