

TABLE OF CONTENTS

PREFACE	ix
CHAPTER 1: Introduction and Summary – PETER A. STURROCK	1
1. Preliminary Remarks	1
2. The Solar Interior	2
3. Atmosphere	5
4. The Sun in its Astrophysical Context	8
5. Solar–Terrestrial Relations	11
References	14
CHAPTER 2: Thermonuclear Reactions in the Solar Interior – PETER D. MacD. PARKER	15
1. Introduction	15
2. Reaction Rate Formalism	16
3. Carbon–Nitrogen Cycle	19
4. Proton–Proton Chain	21
5. Discussion and Conclusions	27
References	29
CHAPTER 3: Atomic and Radiative Processes in the Solar Interior – W. F. HUEBNER	33
1. Introduction	33
2. Calculation of Atomic Structure	38
2.1. The Explicit Ion Model	42
2.2. The Mean Ion Model	46
3. Calculation of Opacity	49
3.1. Bound–Bound Processes	49
3.2. Bound–Free Processes	54
3.3. Free–Free Processes	59
3.4. Scattering Processes	60
3.5. Combining Processes to Obtain the Opacity	61
4. Results	63
5. Uncertainties in the Opacity	65
Acknowledgements	70
References	73
CHAPTER 4: Hydrodynamic and Hydromagnetic Phenomena in the Deep Solar Interior – WILLIAM H. PRESS	77
1. Introduction	77

2. Troublesome Observations	79
2.1. Light Element Depletion	79
2.2. Low ^{37}Cl Neutrino Counts	79
2.3. Possibility of Rapidly Rotating or Nonaxisymmetric Core	80
2.4. 160-Minute Oscillations	81
3. Theoretical Topics	81
3.1. Nucleo-Thermal Destabilizations of g -Modes	82
3.2. Depth of the Convective Zone	84
3.3. Two Topics not Discussed	92
References	92
 CHAPTER 5: The Solar Dynamo: Observations and Theories of Solar Convection, Global Circulation, and Magnetic Fields — PETER A. GILMAN	95
1. Introduction	95
2. Convective Zone Characteristics	97
2.1. Basic Structure of Depth	97
2.2. Oblateness and Latitudinal Temperature Differences	100
2.3. Luminosity and Radius Changes	101
3. Observations and Theory of Solar Convection Zone Motions	103
3.1. Granulation	103
3.1.1. Observations	103
3.1.2. Granulation theory	106
3.2. Supergranulation and Mesogranulation	107
3.2.1. Observations	107
3.2.2. Theory	108
3.3. Related Theories of Convection	109
3.4. Global Circulation	111
3.4.1. Observations	111
3.4.2. Global circulation theory	116
4. Phenomenology of the Sun's Magnetic Field and Related Features	126
4.1. Flux Tubes and Network	127
4.2. Sunspots, Active Regions, and Global Patterns	130
4.3. The Solar Cycle: Manifestations in Sunspots, Magnetic Fields, and Other Properties	135
5. Theories of the Solar Magnetic Field	138
5.1. Flux Tubes and Network	138
5.2. Active Regions and Sunspots	141
5.3. Solar Dynamo Theory	145
6. Concluding Remarks	152
Acknowledgments	153
References	153
 CHAPTER 6: Solar Internal Stresses: Rotation and Magnetic Fields — ROGER K. ULRICH	161
1. Introduction	161

2. Theory	162
2.1. Eddington-Sweet Circulation	162
2.2. Rotationally Driver Instabilities	166
2.3. An Internal Magnetic Field	168
3. Observations	169
4. Summary	173
References	173
 CHAPTER 7: Solar Waves and Oscillations – T. M. BROWN, B. W. MIHALAS, and E. J. RHODES, JR.	
Introduction	177
1. Theory of Waves and Oscillations	179
1.1. Basic Equations	179
1.1.1. Full hydromagnetic equations	179
1.1.2. Linearized equations	181
1.2. Waves	183
1.2.1. Nonmagnetic waves	183
1.2.2. Magnetohydrodynamic waves	189
1.3. General Properties of Solar Oscillations	195
1.3.1. Equations and spheroidal mode solutions	195
1.3.2. Cowling approximation	197
1.3.3. Asymptotic behavior of <i>p</i> - and <i>g</i> -mode frequencies	200
1.3.4. Radial oscillations	203
1.3.5. Properties of nonadiabatic solutions	204
1.3.6. Toroidal oscillations	204
1.4. Excitation and Damping of Solar Pulsations	205
1.4.1. Excitation and damping mechanisms	205
1.4.2. Mode lifetimes	209
1.4.3. Stability of solar pulsation modes	209
1.5. Detailed Solutions for Frequencies and Frequency Splitting	213
1.5.1. Effects of structure on unperturbed frequencies	213
1.5.2. Effects of rotation	214
1.5.3. Effects of internal magnetic fields	216
1.6. Future Theoretical Needs	216
2. Observations	217
2.1. Observational Techniques	217
2.1.1. Diagnostics of spectrum lines	217
2.1.2. Techniques for observing oscillations and trapped waves	219
2.2. Oscillations Observed	222
2.2.1. Observations of 5 minute period <i>p</i> -mode oscillations	222
2.2.2. The 160 minute oscillation	226
2.2.3. Torsional oscillations	227
2.2.4. Localized brightness oscillations	228
2.3. Wave Observations	229
2.4. Waves and Oscillations in Sunspots	230
2.5. Future Observational Needs	233

TABLE OF CONTENTS

3. Oscillations as Probes of the Solar Interior	235
3.1. Introduction	235
3.2. Direct Method	235
3.2.1. Technique	235
3.2.2. Direct method: results	235
3.3. Inversion Methods	238
3.3.1. Technique	238
3.3.2. Applications	240
Acknowledgements	241
References	242
INDEX	249
