PREFACE	xi
CHAPTER 16: Formation of the Sun and its Planets – WILLIAM M. KAULA	1
1. Introduction	1
2. Star Formation	2
2.1. Galactic Structure	2
2.2. Stellar Properties	3
2.3. Planetary Indications	4
2.4. Interstellar Clouds	4
2.5. Observations of Forming Stars	4
2.5.1. T-Tauri Variable Stars	5
2.5.2. Nonemission, Nonvariable Pre-Main Sequence (PMS) Stars	5
2.5.3. Herbig–Haro Objects	5
2.6. Conditions for Cloud Collapse	6
2.7. Models for Star Formation	7
2.8. Modeling of Secondary Features	10
2.9. Dynamical Evolution	11
3. Cosmochemistry	11
3.1. Chronology	12
3.2. Nuclide Variations	14
3.3. Chemical Variations Among Chondritic Meteorites	17
3.4. Chemical Variations Among Differentiated Objects	18
4. Planet Formation	19
4.1. <i>gd</i> Gas-Dust Interaction	20
4.2. <i>CD</i> Disk Dynamics	20
4.3. <i>CpP</i> Planetesimal Swarms	22
4.4. <i>CPD</i> Planet-Disk Interactions	23
4.5. <i>CPP, CPPp</i> Planetary Systems	24
4.6. <i>CP(f, s)p</i> Terrestrial Planet Formation	25
4.7. <i>P, Pg</i> Gaseous Protoplanet Contraction	25
4.8. <i>WD, XD, BD</i> Solar and External Effects on the Nebula	26
5. Implications for the Formation of the Sun and Planets	27
Acknowledgement	27
References	28
CHAPTER 17: The Solar Neutrino Problem: Gadfly for Solar Evolution Theory – MICHAEL J. NEWMAN	33
1. Introduction	33
2. Standard Theory of Solar Evolution	34
3. The Missing Solar Neutrinos	35

4. Have We Left Something Out?	36
4.1. Microscopic Physics	36
4.2. Rotation	36
4.3. Magnetic Fields	37
4.4. Accretion	37
4.5. Star Formation	38
5. The Exotic Models	39
5.1. Mixing	39
5.2. Varying G	40
5.3. Quark Catalysis	40
5.4. Depleted Maxwell Tail	40
5.5. Immiscible H–He	41
5.6. The Central Black Hole	41
5.7. Nonconventional Energy Transport	41
6. Conclusions	42
Acknowledgements	43
References	43
 CHAPTER 18: Stellar Chromospheres, Coronae, and Winds – J. P. CASSINELLI and K. B. MacGREGOR	47
1. Introduction	47
2. Late-Type Stars	50
2.1. Introduction	50
2.1.1. Overview	50
2.1.2. The Solar Case	50
2.1.3. Methodology	54
2.2. Observational Evidence for the Presence of Chromospheres in Late-Type Stellar Atmospheres	54
2.2.1. Spectral Diagnostics and Line Formation	54
2.2.2. Observational Summary and Location in the H–R Diagram	58
2.2.3. The Wilson-Bappu Effect	61
2.3. Observational Evidence for the Presence of Regions and Coronae in Late-Type Stellar Atmospheres	64
2.3.1. Transition Regions	64
2.3.2. Coronae	67
2.4. Chromospheric and Coronal Heating Mechanisms	70
2.4.1. Overview	70
2.4.2. Acoustic Wave Heating	70
2.4.3. Magnetic Heating Mechanisms	74
2.5. Observational Evidence for Mass Loss from Late-Type Stars	76
2.5.1. Main Sequence Stars	76
2.5.2. Circumstellar Absorption Lines	77
2.5.3. Chromospheric Emission Line Asymmetries	79
2.5.4. Circumstellar Dust Shells	81
2.5.5. Summary	83

2.6. Mass Loss Mechanisms for Late-Type Giants and Supergiants	84
2.6.1. Overview	84
2.6.2. Thermally Driven Winds	86
2.6.3. Radiation Driven Winds	87
2.6.4. Wave Driven Winds	88
3. The Winds and Coronae of Early-Type Stars	89
3.1. Introduction	89
3.2. The Velocity and Mass Loss Rates Derived from Line and Continuum Observations	92
3.2.1. The Formation of P Cygni Profiles	93
3.2.2. The Free-Free Continuum Energy Distribution of Hot Stars	97
3.3. Coronal Gas in Early-Type Stars	99
3.3.1. Superionization of the Winds	99
3.3.2. X-Ray Observation of Early-Type Stars	101
3.4. Wind Dynamics	104
3.4.1. Radiation Forces on Line Opacity: Momentum Deposition Considerations	105
3.4.2. Radiative Acceleration	106
3.4.3. Instability of Line Driven Winds and the Consequences	110
3.4.4. Hybrid Models with a Base Coronal Zone	112
3.4.5. Magnetically Driven Winds and Magnetically Dominated Coronae	113
Acknowledgements	115
References	115
 CHAPTER 19: Solar and Stellar Magnetic Activity – ROBERT W. NOYES	125
1. Introduction	125
2. Solar and Stellar Magnetic Activity: A Phenomenological Comparison	127
2.1. Surface Magnetic Fields and their Effects on Stellar Radiative Flux	127
2.2. Direct Detection of Magnetic Fields on Stars Like the Sun	132
2.3. Ca II H and K Emission as Indicators of Stellar Magnetic Fields	133
2.4. Coronal Active Regions	136
2.5. Magnetic Activity Cycles	138
3. The Rotation/Activity/Age Connection	140
3.1. The Aging of Magnetic Activity and Rotation	140
3.2. Rotation as the Fundamental Determinant of Magnetic Activity	141
3.3. The Influence of Convection Zone Properties	143
3.4. The Vaughan-Preston Gap	144
3.5. The Evolution of Rotation and Magnetic Activity on the Sun	146
4. Avenues for Future Research	147
4.1. Observational Studies of Solar Magnetic Activity	148
4.2. Observational Studies of Stellar Magnetic Activity	149
4.3. Theoretical Studies	150
Acknowledgements	150
References	150

CHAPTER 20: Effects of Solar Electromagnetic Radiation on the Terrestrial Environment – ROBERT E. DICKINSON	155
1. Introduction	155
2. Atmospheric Structure and Composition	158
2.1. Thermosphere	158
2.2. Stratosphere and Mesosphere Structure	160
2.3. Stratosphere and Mesosphere Chemistry	162
2.4. Tropospheric Chemistry	164
3. The Climate System	167
3.1. Current Questions	167
3.2. Introduction to Simple Climate Models	167
3.3. Tapping of Thermal Radiation by Atmospheric Constituents	170
3.4. Thermal Feedback by Clouds and Water Vapor	172
3.5. Anthropogenic Modulation of Trace Gases Important for Climate	175
3.6. Atmospheric and Oceanic Circulation and the Seasons	177
3.7. Primitive Climate, the Carbon Cycle and the Faint-Early-Sun	178
4. Solar Radiation Drives the Biosphere	178
4.1. Origins of Photosynthesis	178
4.2. Photosynthesis in Action	181
4.3. Harvesting the Sunlight, Net Primary Productivity	184
5. Concluding Remarks	187
Acknowledgements	189
References	189
CHAPTER 21: The Effect of the Solar Wind on the Terrestrial Environment – N. U. CROOKER and G. L. SISCOE	193
1. Introduction	193
2. General Morphology	194
3. Solar Wind and Geomagnetic Activity	195
3.1. Solar Wind Streams	195
3.2. Geomagnetic Response to Streams	201
3.3. Periodic Geomagnetic Activity	207
3.3.1. Geomagnetic Pulsations	207
3.3.2. Diurnal and Annual Variations	208
3.3.3. Solar Cycle and Longer Period Variations	211
4. Transfer Mechanisms at the Magnetopause	212
4.1. Magnetic Merging	213
4.2. Other Mechanisms	220
4.3. Composite Model	220
5. Magnetospheric Convection	222
5.1. Convection Morphology	222
5.2. Birkeland Currents, Alfvén Layers, and Shielding	224
5.3. The Plasmasphere: a Convection/Corotation Forbidden Zone	226
5.4. Time Dependent Convection – The Substorm Cycle	227
5.5. Computer Modeling of Convection	228
5.6. Convection and Magnetic Merging in the Magnetotail	232

6. Magnetosphere Effects on the Ionosphere and Thermosphere	238
6.1. Low-Latitude Electric Fields and Currents	238
6.2. Parallel Electric Fields	239
6.3. Ionospheric Outflow	241
6.4. Effects on Thermosphere	242
7. Middle and Lower Atmosphere	243
Acknowledgements	244
References	244
 CHAPTER 22: Solar Energetic Particles and their Effects on the Terrestrial Environment – GEORGE C. REID	
1. Introduction	251
2. Solar Energetic Particles and the Magnetosphere	252
3. Energy Loss Processes	254
3.1. Polar Cap Absorption	254
3.2. Ion Chemistry of the Middle Atmosphere: Influence of Solar Energetic Particles	255
3.3. Polar Glow Aurora: Optical Effects of Solar Energetic Particle Precipitation	260
4. Atmospheric Alterations and Nuclear Interactions	261
4.1. Alterations in Middle-Atmospheric Composition	261
4.2. Nuclear Interactions and C ¹⁴ Production	267
5. Effects of Solar Particle Events	268
5.1. Effects on Radio Communication and Navigation	268
5.2. Effects on Global Atmospheric Electricity	271
5.3. Potential Impact on Climate	273
5.4. Solar Energetic Particles and the Evolution of the Atmosphere and Biosphere	274
6. Conclusion	275
References	276
