

## TABLE OF CONTENTS

PREFACE	XIII
ACKNOWLEDGEMENTS	XV
I. INTRODUCTION	1
II. THE LOW-TEMPERATURE FLARE	6
2.1. Flare Observations in the H $\alpha$ Line	7
2.1.1. The Flare Importance	14
2.1.2. Flares in Relation to Magnetic Fields	18
A. Flare Positions Relative to Sunspots and Plages	20
B. Flare Positions in the Magnetic Field	24
C. Flare-Associated Changes in the Magnetic Field	28
C.1. Old-Type Measurements	28
C.2. High-Resolution Measurements	31
C.3. Mathematical Models of Coronal Magnetic Fields	32
C.4. Other Methods	33
C.5. Summary	34
2.1.3. Motions in Flares	36
A. Slow Ascent	37
B. Rise and Fall	37
C. High-Speed Ejections	38
D. Rotation Effects	40
E. Expansion of Flare Ribbons	40
F. Fast Expansion	49
G. In-Fall Motions	49
2.2. Flare Spectra	49
2.2.1. Characteristic Features of the Flare Spectrum	51
2.2.2. Method of Analysis of Hydrogen Lines	55
2.2.3. Line Broadening	56
2.2.4. Electron Density	59
A. Electron Density in Disc Flares	59
B. Electron Density in Limb Flares	63
2.2.5. The Optical Thickness	66
2.2.6. Electron Temperature	69

2.2.7. The Filamentary Structure of Flares	72
2.2.8. Hydrogen Density	76
2.2.9. Line Asymmetry	76
2.2.10. Differences between Prominences and Limb Flares	80
2.2.11. Continuous Emission	81
A. Synchrotron Radiation	87
B. Particle Penetration to Low Atmospheric Layers	89
C. Heating of Upper Photosphere	92
D. White-Light Flare Wave	93
2.3. Models of Chromospheric Flares	94
2.3.1. Models of Energy Transfer from the Corona	95
A. Brown's Model	95
B. Model by Shmeleva and Syrovatsky	96
C. Models Including both Conduction and Particle Heating	98
D. Models by Canfield and Athay	100
2.3.2. Model by Machado and Linsky	104
A. The Photospheric Flare	104
B. The Chromospheric Flare	105
 III. THE HIGH-TEMPERATURE FLARE	108
3.1. Thermal Phenomena	108
3.1.1. Coronal Condensations	108
3.1.2. Soft X-Ray Emission	111
A. Soft X-Ray Bursts	111
B. X-Ray Flares	112
C. Indirect Observations of Solar X-Rays	115
3.1.3. Flare Spectrum in the X-Ray Region	116
A. The Continuous Emission	118
B. The Line Emission	120
3.1.4. Temperature in the X-Ray Flare	128
A. Temperature and Emission Measure	128
B. Line Excitation	134
C. Flare Cooling	137
3.1.5. Electron Density in the X-Ray Flare	138
3.1.6. Gradual Microwave Bursts	140
3.2. Non-Thermal Phenomena	143
3.2.1. Hard X-Ray Bursts	143
A. Characteristic Properties of the Hard X-Ray Bursts	143
B. Evidence on the Non-Thermal Nature of the Hard X-Ray Bursts	151
C. Theoretical Interpretation of the Hard X-Ray Bursts	153
D. Models of Impulsive and Continuous Acceleration	156
E. Thin-Target and Thick-Target Emission	158

3.2.2. EUV Bursts	161
3.2.3. Impulsive Microwave Bursts	170
A. Characteristic Properties	170
B. Interpretation of the Impulsive Microwave Bursts	176
C. Controversy with the Theory of Hard X-Ray Bursts	178
3.2.4. Type IV Bursts	180
A. Type IVmA Bursts	183
B. Type IVmB Bursts	188
C. Type IVdm Bursts and Radio Pulsations	189
D. Type IV Burst Spectrum	191
3.2.5. Type II Bursts	195
3.2.6. Type III Bursts	202
A. Type III Burst Occurrence	202
B. Properties of Type III Bursts	208
C. Interpretation of Type III Bursts	211
D. Type U Bursts	213
E. Type V Bursts	215
 IV. FLARE-ASSOCIATED OPTICAL PHENOMENA	 216
4.1. Pre-Flare Filament Activation	216
4.2. Surges and Sprays	220
4.2.1. Surges	221
4.2.2. Sprays	223
4.3. Flare Waves	225
4.3.1. The Wave Fronts	226
4.3.2. Disparitions Brusques	229
4.4. Loop Prominences	233
 V. PARTICLE EMISSION FROM SOLAR FLARES	 238
5.1. Solar Protons	240
5.1.1. Cosmic-Ray and Proton Flares	240
A. Characteristics of the Flare on the Sun	240
B. Characteristics of the Active Region	244
C. Complexes of Activity	247
D. Time Variations in the Proton Flare Occurrence	250
5.1.2. Satellite-Sensed Events	252
5.1.3. The Energy Spectrum	254
A. The Propagation Effects	256
B. The Storage Effects	260
C. The Size of an Event	262
5.2. Heavier Nuclei	264
5.3. Solar Electrons	270
5.3.1. Non-Relativistic Electrons	270

A. The Event Occurrence and the Associated Flares	270
B. Proton-Electron and Pure Electron Events	274
C. Time of Acceleration	279
5.3.2. Relativistic Electrons	279
5.4. Nuclear Reactions in Flares	282
5.4.1. Accelerated Isotopes of Hydrogen and Helium	284
5.4.2. Neutrons	286
5.4.3. $\gamma$ -Rays	289
5.5. Particle Clouds and Interplanetary Shock Waves	292
5.5.1. Characteristic Properties of Interplanetary Shocks	293
5.5.2. Shock-Wave-Associated Variations in the Particle Flux	294
5.5.3. Increased Helium Content behind Interplanetary Shock Waves	297
<b>VI. FLARE MODELS</b>	<b>300</b>
6.1. Basic Properties of Flares	300
6.2. Synthesis of a Flare	307
A. Pre-Flare Phase	307
B. Quasi-Thermal Flare	307
C. Impulsive Flare	308
D. Electron Flare	308
E. Proton Flare	308
F. Problems	309
6.3. The Energy Source	310
6.4. The Energy Storage	310
6.4.1. Alfvén Waves as the Source of Flares	311
6.4.2. Models with a Passive Role for the Magnetic Field	312
A. Elliot's Model	313
B. Schatzman's Model	313
C. Carmichael's Model	314
D. Pneuman's Model	314
E. Model by Sen and White	315
6.4.3. Models with an Active Role for the Magnetic Field	315
A. Model by Gold and Hoyle	316
B. Model by Alfvén and Carlqvist	317
C. Sheared Fields	318
D. Force-Free Flare Build-up	318
E. Current Sheets	320
6.5. The Energy Release	322
6.5.1. Models without a Current Sheet	322
A. Piddington's Model	322
B. Elliot's Model	323
C. Kahler and Kreplin's Model	323
D. Evaporating Flare Models	324

E. Alfvén and Carlqvist's Model	326
6.5.2. Current Sheet Models	327
A. Priest and Heyvaerts' Model	330
B. Sturrock's Model	331
C. Similarities with Magnetospheric Substorms	333
D. Pustilnik's Model	334
6.5.3. Syrovatsky's Model	336
A. The Pre-Flare Activation	336
B. The Thermal Phase	337
C. The Impulsive Phase	340
D. Deficiencies of Syrovatsky's Theory	341
6.6. The Particle Acceleration	342
6.6.1. Current Interruption	344
6.6.2. Fermi Mechanism	345
6.6.3. Stochastic Acceleration	347
