1 The Problem of the Solar Chromosphere and Its Bearing on the General Problem of Stellar Atmospheric Structure, by R. N. Thomas	1
I. Definitions and Statement of the Problem of the Solar Chromosphere	1
II. The Significance of the Outer Solar Atmosphere in the General Study of the Structure of Stellar Atmospheres	4
III. High-Energy Aerodynamics and Stellar Atmospheres	6
IV. The General Stellar Atmosphere	9
V. The Solar Chromosphere	14
VI. Explicit Statement of the Kind of Non-LTE Effects Treated in This Monograph, and Their Relation to the Transport Problems of Interest	18
2 Chromospheric Data, by R. Grant Athay	25
I. Introduction	25
II. Eclipse Observations of the Chromosphere	27
3 Variations in Chromospheric Structure and Mass Motions, by R. Grant Athay	45
I. Introduction	45
II. Positional Variations	45
III. Temporal Variations	51
IV. Data on Mass Motions—Spicules	57
4 The Spectroscopic State of a Gas in a Statistically Steady State, by R. N. Thomas	78
I. The Equations of Statistically Steady State	78
II. Solutions of the Equations of Statistical Equilibrium	92
III. The Problem of Specifying $\int \bar{I}_\nu \varphi_\nu d\nu$ in an Arbitrary Gas Mass and Results on the Associated Source Function	106
5 Thermal Stability of a Gas with a Non-Radiative Energy Input and Radiative Efflux, by R. Grant Athay	142
I. Steady-State Energy Transfer	142
II. Dominant Sources of Radiation Loss	148
III. Details of the Model	155
IV. Comments on the Model	168

6 The Analysis of Emission in the Optical Continuum to Obtain $n_e(h)$ and $T_e(h)$ Under the Assumption of a Spherically Symmetric Lower Chromosphere, by <i>R. N. Thomas</i>.....	170
I. Introduction.....	170
II. Critical Summary of Interpretation of Non-Eclipse Observations in the Optical Continuum.....	173
III. Interpretation of Eclipse Observations in the Optical Continuum.....	193
7 Extension of the Model to Include Helium Emission, by <i>R. Grant Athay</i>.....	229
I. Estimate of Helium Free-Bound Emission.....	229
II. Helium Excitation.....	231
III. High-Temperature Excitation of Helium.....	234
IV. General Formulation of Model.....	242
V. Calculation of Model.....	246
VI. Active Regions.....	254
8 An Extension of the Model to Include Radio Noise Data, by <i>R. Grant Athay</i>.....	261
I. Radio Noise Emission.....	261
II. A Model From Radio Data.....	264
III. Discussion of the Model.....	268
9 Data in Whose Analysis the Effects of Both Self-Absorption and of Departures from a State of Local Thermodynamic Equilibrium Must Be Included, by <i>R. N. Thomas</i>.....	272
I. General Principles Underlying the Analysis of the Line Spectrum.....	273
II. Analysis of the Hydrogen Lines.....	280
III. Summary of Analysis of the Metallic Spectrum of the Chromosphere.....	352
10 Summary Comments on the Chromospheric Model, by <i>R. N. Thomas and R. Grant Athay</i>.....	376
Appendix I, by <i>R. Grant Athay</i>.....	388
Appendix II.....	405
Bibliography.....	411
Index.....	419
