Part One

1 Statistical Description of Turbulence	3
A. Homogeneous or Stationary Fields.....	3
1.1 Introduction	3
1.2 Notations.....	5
1.3 Averages and Operations.....	6
1.4 Probabilities for One-Dimensional Scalar Functions	7
1.5 Moments and Characteristic Functions.....	10
1.6 Joint Densities and Distributions.....	12
1.7 Stationarity.....	13
1.8 Covariances and Autocorrelations.....	14
1.9 Representation.....	16
1.10 Properties of Spectra.....	18
1.11 Cross Correlations and Cross Spectra.....	19
1.12 Space Correlations and Space Spectra.....	23
1.13 Multi-Dimensional Vector Fields.....	26
1.14 Lagrangian Description.....	31
B. Problems of Measurement and the Interpretations of Data in Geophysics.....	35
1.15 Averaging Problems.....	35
1.16 Filtering and Instrumental Lag, Averaging, the Estimation of Spectra and Autocorrelations and the Effect of Sampling.....	46
1.17 Taylor's Hypothesis.....	56

2 Mechanics of Turbulence.....	59
2.1 Governing Equations.....	59
2.2 The Equations for the Mean Quantities.....	63
2.3 Turbulent Diffusivities.....	65
2.4 The Equations for the Fluctuating Quantities; the Energy Budget.....	67
2.5 Meteorological Approximations.....	71
2.6 Spectral Energy Transfer in Homogeneous Turbulence.....	76
2.7 The Form for the Spectra under Isotropic Conditions.....	82
2.8 The Form of the Spectra in the Equilibrium Range.....	83
2.9 The Inertial Subrange.....	83
2.10 The Temperature Fluctuations.....	84
2.11 Relations between Various Scales; Requirements for Isotropy ..	85
2.12 Dissipation.....	89
2.13 The Inhomogeneous Regions.....	90
2.14 An Approximate Correction for Moisture.....	95

Part Two

3 The Profiles of Temperature and Wind Close to the Ground ..	99
3.1 Introduction.....	99
3.2 Definition of the Surface Boundary Layer.....	99
3.3 The Velocity Profile in Neutral Air.....	103
3.4 Profiles in Near-Neutral Conditions.....	104
3.5 Free Convection.....	108
3.6 General Profiles in Unstable Air	110
3.7 Windless Convection.....	116
3.8 Wind and Temperature Profiles in Stable Air.....	117

4 The Magnitude of Turbulent Fluctuations	119
4.1 Introduction	119
4.2 The Budget of Kinetic Energy near the Surface	120
4.3 The Characteristics of the Total Kinetic Energy	126
4.4 The Variance of Vertical Velocity	131
4.5 The Variance of Lateral Velocity	142
4.6 The Variance of Longitudinal Velocity	154
4.7 The Variance of Temperature	156
4.8 Covariances	159
5 Spectra and Scales of Atmospheric Turbulence	161
5.1 General Characteristics	161
5.2 The Inertial Subrange	162
5.3 The Spectrum of Vertical Velocity	167
5.4 The Spectrum of Lateral Velocity	175
5.5 The Spectrum of Longitudinal Velocity	180
5.6 Cross Spectra Between Velocity Components	185
5.7 Comparison of Scales in Different Directions	190
5.8 Lagrangian Correlations	197
5.9 Spectra of Scalars	201
5.10 Geometrical Interpretation	210
Appendix A. Meteorological Terms	213
Appendix B. Fluid Mechanical Terms	215
References	223
Index	233
