

CONTENTS

<i>Preface</i>	ix
<i>Introduction</i>	xi
1 THE RELEVANT PHYSICS	1
Electricity and Magnetism	
Waves	
Atoms, Molecules, and Gases	
2 THE ATMOSPHERE	35
3 RESEARCH BY BALLOONS AND ROCKETS	49
4 PROBING WITH SOUND WAVES	74
Sound in the Upper Atmosphere	
Ground Level Explosions	
Rocket Experiments	
Other Experiments involving Atmospheric Density	
5 PROBING WITH RADIO WAVES	95
Ionosphere	
Ground-based Radio Probing	
Rocket Probing of the Ionosphere	
Ionospheric Changes	
Whistlers	
6 THE OZONOSPHERE AND THE IONOSPHERE	121
Radiation from the Quiet Sun	
The Ozone Layer	
Photochemical Action of Sunlight	
The Quiet Sun and the Ionosphere	
7 LIGHTS IN THE NIGHT SKY	150
The Northern Lights	
The Night Air-glow	
The Twilight Flash	
Artificial High Altitude Glows	
8 AERIAL TIDES AND MAGNETIC EFFECTS	175
Aerial Tides	
Quiet Magnetic Variations	
The Atmospheric Dynamo	
Electromagnetic Tidal Effects—an Atmospheric Motor	

CONTENTS

9	SOLAR, MAGNETIC, AND IONOSPHERIC DISTURBANCES	209
	Solar Disturbances	
	Magnetic Disturbances	
	Correlation between Magnetic Storms and Solar Disturbances	
	Solar Corpuscular Streams and their Terrestrial Effects	
	Radio Fade-outs	
10	METEORS	239
	Introduction	
	Radio Observations of Meteors	
	Ionization by Meteors	
	Determination of Atmospheric Properties	
	The Need for Rocket Observations	
11	COSMIC RAYS	261
	The Nature of Cosmic Rays	
	Variations due to Atmospheric Effects	
	Effects of the Earth's Magnetic Field	
	Variations Associated with Solar Activity	
	Constitution of the Primary Radiation	
12	ARTIFICIAL SATELLITES	295
	Introduction	
	Tracking and Telemetry	
	Scientific Uses	
	The First Artificial Satellites	
13	FUTURE POSSIBILITIES	318
	Extension of Ground-based Studies	
	Extension of Rocket Technique	
	Extensions in Physical Technique	
	Outstanding Problems	
	<i>Bibliography</i>	326
	<i>Index</i>	327
