

CONTENTS

PREFACE	v
FOREWORD	vii
LIST OF CONTRIBUTORS AND CHAPTERS	xix

CHAPTER 1

SOLAR ULTRAVIOLET AND X-RAY RADIATION	1
C. DE JAGER	
1. Introduction	1
2. The Photosphere and the Transition Photosphere-Chromosphere	2
3. The Chromosphere and the Transition to the Corona	7
4. X-Rays from the Quiet Corona	13
5. The Coronal Activity Regions	24
6. X-Ray Emission from Solar Flares	30
Acknowledgment	38
References	38

CHAPTER 2

SOLAR FLARES	43
M. A. ELLISON AND J. H. REID	
1. Introduction	43
2. Flare Statistics	44
3. Flare Observations	46
4. Flare Spectra and Theories	52
5. Physical Processes and the Results of the Plasma Discharge	54
References	61

CHAPTER 3

SOLAR RADIO EMISSIONS	65
S. F. SMERD	
1. Solar Radio Astronomy before the IGY	65
2. The Present State of Solar Radio Astronomy	74
3. The Flare Event	90
Acknowledgment	94
References	94

CHAPTER 4

CORONAL EXPANSION AND SOLAR CORPUSCULAR RADIATION 99

E. N. PARKER

1. The Existence of Solar Corpuscular Radiation	99
2. The Origin of Solar Corpuscular Radiation	101
3. Physics of Coronal Expansion	104
4. Supersonic Expansion Solutions	107
5. Quiet-Day Interplanetary Magnetic Fields	110
6. Enhanced Solar Corpuscular Radiation	111
References	112

CHAPTER 5

HIGH-ENERGY SOLAR PARTICLE EVENTS 115

J. G. ROEDERER

1. Detection of Particles at Earth	116
2. The Particles in Interplanetary Space	120
3. Solar Production of High-Energy Particles	137
Acknowledgments	142
References	143

CHAPTER 6

COSMIC RADIATION AND SOLAR MODULATION 147

PETER MEYER

References	159
------------	-----

CHAPTER 7

A SURVEY OF MAGNETOSPHERIC BOUNDARY PHENOMENA 161

L. A. FRANK AND J. A. VAN ALLEN

1. Introduction	161
2. Comparison of Trajectories of Several Space Probes and Earth Satellites	162
3. Low-Energy Particles near the Magnetospheric Boundary	163
4. Energetic Charged Particles near the Magnetospheric Boundary	165
5. Low-Altitude, High-Latitude Studies	169
6. Gross Character of Fields near the Magnetospheric Boundary	171
7. Polarization Electric Fields and Charged Particle Dynamics	173
8. Shocks, Deformation, and Motion of the Magnetospheric Boundary	176
9. Dawn-Evening Distribution of Energetic Electrons	180
10. Summary	184
References	185

CHAPTER 8

THE GEOCORONA **189**

JOSEPH W. CHAMBERLAIN

1. The Observations Prior to IGY **189**
2. Early Interpretations: Interplanetary or Terrestrial? **190**
3. Observations Since the IGY **191**
4. Models of the Hydrogen Distribution in Space **191**
5. Areas of Theoretical Work **192**
6. Planetary Coronae and Atmospheric Physics **193**
- References **194**

CHAPTER 9

IONOSPHERIC CONSTITUTION AND SOLAR CONTROL **197**

HERBERT FRIEDMAN

1. Solar Ionizing Radiation **197**
2. Atmospheric Models **199**
3. Ionic Reactions and Electron Loss Processes **200**
4. Production of the Ionosphere **202**
5. *E*-Region **207**
6. *F*-Region **220**
7. Ionization by Energetic Particles **221**
8. Solar Flares and Sudden Ionospheric Disturbances **223**
- Conclusion **238**
- References **238**

CHAPTER 10

THE STRUCTURE OF THE UPPER ATMOSPHERE **243**

M. NICOLET

1. Introduction **243**
2. The Chemosphere **246**
3. Density in the Heterosphere **249**
4. Variation of Solar Activity and Temperature **251**
5. Diffusion **257**
6. Thermobalance in the Heterosphere **260**
7. Composition **262**
8. Exosphere **267**
- References **273**

CHAPTER 11

STUDIES OF IONOSPHERIC ABSORPTION **277**

W. R. PIGGOTT

1. Introduction **277**
2. Some Particular Results **279**

3. Comments on Absorption Theory	283
4. Some Experimental Tests of Absorption Theory	287
5. Some Suggestions for Further Research	290
6. The Diurnal Variation of Absorption at High Latitudes	291
7. Conclusions	294
Acknowledgments	295
References	295

CHAPTER 12

IONOSPHERIC MOVEMENTS AND IRREGULARITIES 299

COLIN O. HINES

1. Equatorial Sporadic E	299
2. High-Latitude E_s -Movement	301
3. Field-Aligned F -Region Irregularities	303
4. E -Region Winds	305
5. Ionization "Drifts"	307
6. Temperate-Latitude Sporadic E	308
7. Traveling Ionospheric Disturbances	310
8. Midlatitude Spread F	313
9. Internal Atmospheric Gravity Waves	313
10. Turbulence	315
References	316

CHAPTER 13

WHISTLERS AND VLF EMISSIONS 319

R. A. HELLIWELL

1. Background	319
2. Results of the IGY-IGC Period	323
3. Post-IGY Results	324
4. Problems	331
References	333

CHAPTER 14

MORPHOLOGY OF STORMS IN THE IONOSPHERE 335

TATSUZO OBAYASHI

1. Introduction	335
2. Disturbances in the E -Region	338
3. Disturbances in the F -Region	344
4. Theoretical Interpretations	352
Acknowledgments	362
References	362

*CHAPTER 15***THE AURORA**

367

SYDNEY CHAPMAN AND SYUN-ICHI AKASOFU

1. A Summary of Pre-IGY Auroral Research	367
2. The IGY Plans for Auroral Research	371
3. Auroral Morphology	372
4. A Typical Auroral Cycle	374
5. The Distribution of the Aurora	377
6. The Polar Cap Aurora	379
7. Auroral Spectroscopy	380
8. Auroral Particles and the Radiation Belt	385
9. Radio Studies of the Aurora	389
10. The Problems of Auroral Physics	391
Acknowledgments	394
Bibliography	394
References	395

*CHAPTER 16***AIRGLOW**

401

D. BARBIER

1. Introduction	401
2. Discovery of New Types of Radiation	402
3. Altitudes and Correlations	405
4. Interferometric and Spectroscopic Temperature Determination	406
5. Structure of the Upper Night Layer	409
6. Structure of the Nocturnal Layer at an Altitude of 100 km	412
7. Twilight and Diurnal Sodium	414
8. Lower Latitude Auroras	416
9. Conclusions	417
References	418

*CHAPTER 17***MAGNETIC FIELD AT THE POLES**

423

TAKESI NAGATA

1. The Field over the Polar Regions	423
2. Secular Variation during and after the IGY	425
3. Morphology of Geomagnetic Daily Variation on Quiet Days	428
4. Conjugate Relationship of Geomagnetic Bay Disturbances	433
5. Conjugacy of Large-Amplitude Pulsative Variations	442
6. The Field around the Poles and the Magnetosphere	449
References	451

CHAPTER 18

GEOMAGNETIC STORMS AND RELATED PHENOMENA 455

S. MATSUSHITA

- 1. Introduction 455
- 2. Observations and Morphology 458
- 3. Theories 466
- 4. Conclusion 476
- References 477

CHAPTER 19

RAPID VARIATIONS OF THE ELECTROMAGNETIC FIELD OF THE EARTH 485

V. A. TROITSKAYA

- Introduction 485
- Section 1
 - 1.1. Continuous Pulsations (Pc) 488
 - 1.2. Pulsation Trains (Pt) 499
 - 1.3. Application to Crustal and Upper Mantle Studies 502
- Section 2
 - 2.1. Rapid Irregular Pulsations (SIP) 504
 - 2.2. Pearl-Type Pulsations (PP) 508
 - 2.3. Fine Structure of Magnetic Storms 521
- Conclusions 526
- References 527

CHAPTER 20

INTERNATIONAL COOPERATION IN METEOROLOGY AND THE ATMOSPHERIC SCIENCES 533

THOMAS F. MALONE

- 1. Recent Technical Developments 534
- 2. The Social Background 535
- 3. Outline of an International Effort 537
- 4. Present Planning 539

CHAPTER 21

THE INTERNATIONAL YEARS OF THE QUIET SUN 1964-1965 541

W. J. G. BEYNON

- 1. Meteorology 542
- 2. Geomagnetism 543
- 3. Aurora 544
- 4. Airglow 545
- 5. Ionosphere 545

6. Solar Activity	547
7. Cosmic Rays	548
8. Aeronomy	549
9. World Data Centers	549
10. World Days	550
11. Committee for the IQSY	551
 LIST OF SELECTED ABBREVIATIONS	 555
