
Contents

1. The Setting	1
1.1 Problems	1
1.2 Historical	3
2. The Atmosphere.	7
2.1 Meteors as Probes of the Upper Atmosphere	7
2.2 Diffusion and Turbulence	7
2.3 Structure of the Upper Atmosphere	11
2.4 Recombination	15
2.5 Sound	16
3. Classification and Physico-Chemical Properties of Meteors	17
3.1 Meteor Classification and Nomenclature.	17
3.2 Compact Meteors and Dustballs; Artificial Meteors.	18
3.3 Classification of Phenomena	19
3.4 The Train	21
3.5 Relative Abundance of Meteoric Iron and Stone.	22
3.6 Physical Properties of Iron	24
3.7 Physical Properties of Stone.	25
3.8 Meteor Spectra	27
4. Meteoroid Energy Transfer	29
4.1 Geometry	29
4.2 Rotation	31
4.3 Aerodynamic Pressure, Drag, and Energy Transfer	34
4.4 Shielding by Vapors	43
4.5 The Coefficient of Accommodation	46
4.6 Radiation from Meteoroids	55
4.7 Sputtering	56
4.8 Deceleration	57
5. Ablation	60
5.1 Types and Heats of Ablation	60
5.2 Normal and Abnormal Environment	62
5.3 The Typical Light Curve	63
5.4 Observable Range and Length of Trail	65
5.5 Velocity-Mass Relation	68
5.6 General Equations of Ablation and Motion	72

5.7	The Standard Model	73
5.8	Atmospheric Density-Radius Relation in Standard Model	75
6.	Details of Energy Transfer and Types of Ablation	80
6.1	Air Cap	80
6.2	Deformation of Drops and Limit of Spraying by Drag	83
6.3	Conductivity and Temperature Differences During Pre-heating	87
6.4	Deformation of Molten Meteoroids and Foreshortening of the Trail.	88
6.5	Equalization of Evaporation and Radiation in the Absence of Rotation	90
6.6	Equalization by Convection in a Drop	91
6.7	Surface Heat Transport by Rotation	93
6.8	Radiation Losses and Temperature of Evaporation	97
6.9	Drag-Induced Flow of the Melt	101
6.10	Centrifugal Flow of the Melt	106
6.11	Charts of Types of Ablation.	108
7.	Atomic Collisions	113
7.1	Atomic Collisions as a Source of Ionization and Radiation	113
7.2	Potential Energy of Atomic Interaction.	115
7.3	Elastic Energy Transfer.	117
7.4	Total Path and Transversal Penetration of Atoms.	121
7.5	Dilution of Coma.	123
7.6	Inelastic Energy Transfer and Dissociation of Diatoms	127
7.7	Probability of Ionization and Excitation	128
7.8	Ion Distribution in the Coma	130
8.	Meteor Radiation	133
8.1	Radiative Efficiency of Atomic Excited States	133
8.2	Luminous Efficiency of Meteor Impact Radiation	137
8.3	Temperature Radiation in Discrete Energy Levels	141
8.4	Other Sources of Meteor Radiation.	145
8.5	Calculation of Meteor Masses	146
9.	Some Applications.	149
9.1	Draconids as Dustballs	149
9.2	The Average Naked-Eye Meteors.	152
	Appendix 1. Physical Characteristics of Iron	156
	Appendix 2. Physical Characteristics of Meteoritic and Terrestrial Stone	159
	Appendix 3. Miscellaneous Information	163
	Principal Notations	165
	References	167
	Index	171
