

Contents

1	Introduction	1
2	Plasma Component of the Air	4
2.1	Sources of Ionization	4
2.2	Ion Composition	5
2.3	Electric Conductivity of Lower and Middle Atmosphere	6
2.4	Electric Conductivity of Upper Atmosphere	8
I	Thunderstorms and Related Phenomena	
3	Global Electric Circuit	15
3.1	Electric Fields and Currents	15
3.2	Space Charges	18
3.3	Equivalent Global Electric Circuit	20
4	Thunderstorms	21
4.1	Occurrence of Thunderclouds	21
4.2	Development of a Thunderstorm Cell	22
4.3	Rain Drop Spectra	24
4.4	Electric Fields and Charges in Thunderclouds	25
5	Thunderstorm Electrification	29
5.1	Charge Separation in Clouds	29
5.2	Theory of Precipitation-Powered Electrification	31
5.3	Thunderstorm as Local Generator	34
5.4	Equivalent Current of Local Generator	37
5.5	Thunderstorm as Global Generator	39
6	Lightning	43
6.1	Phenomenology of Lightning	43
6.2	Bruce-Golde and Transmission Line Models of Return Stroke Currents	48
6.3	Resonant Wave Guide Model of Return Strokes and <i>K</i> Strokes	49
6.4	Excitation of Resonant Modes	53

7 Sferics	57
7.1 Observed Wave Forms	57
7.2 Electromagnetic Radiation from Lightning Channels	60
7.3 Propagation Effects on Sferic Wave Forms	63
7.4 Schumann Resonances	69
7.5 Nuclear Electromagnetic Pulses	70

II Tidal Wind Interaction with Ionospheric Plasma

8 Electric Sq and L Currents	77
8.1 Origin of Sq and L	77
8.2 Observations of Sq Variations on the Ground	78
8.3 Morphology of L	83
8.4 Space Observations Related to Sq	83
8.5 Solar Influences on Sq	86
9 Ionospheric Dynamo	89
9.1 Elements of Tidal Theory	89
9.2 Coupling Between Tidal Wind and Ionospheric Plasma	92
9.3 Diurnal (1, -2) Mode	94
9.4 Semidiurnal (2, 2) Mode	97
9.5 Equivalent Electric Circuit of Sq	99
9.6 Equatorial Electrojet	101
9.7 Upward and Downward Mapping of Electric Sq Field	104

III Solar Wind Interaction with Magnetosphere

10 Coupling Between Solar Wind and Geomagnetic Field	111
10.1 Solar Wind and Interplanetary Magnetic Field	111
10.2 Closed Magnetosphere	113
10.3 Open Magnetosphere	119
10.4 Geomagnetic Activity	124
10.5 Seasonal and Universal Time Variations of Geomagnetic Activity	127
11 Global Magnetospheric Electric Fields and Currents	132
11.1 Convection Field	132
11.2 Co-Rotation Field	138
11.3 Polar Cap Field	140
11.4 Electric Hall Current Systems	143
11.5 Polar Electrojets	145
11.6 Ring Current	147
11.7 Magnetospheric Substorm	150

12 Theory of Wave Propagation Within the Magnetosphere 155

12.1 Ray Theory 155

12.2 Full Wave Theory 160

12.3 Excitation of Plasma Waves 164

12.4 Ionospheric Screening Layer 165

12.5 Transmission Line Model of Magnetosphere 168

13 Waves in the Magnetosphere 170

13.1 Geomagnetic Pulsations 170

13.2 Whistlers 176

13.3 Electromagnetic Waves of Magnetospheric Origin 180

13.4 Man-Made Wave Activity 182

14 Appendix 186

14.1 Units and Coordinate Systems 186

14.2 Geomagnetic Dipole 187

14.3 Basic Formulas of Electromagnetism and Hydromagnetics 189

14.4 List of Frequently Used Symbols 191

References 194
