

CONTENTS

Introduction	1
---------------------	----------

PART I. MATTER AND CHEMISTRY

1. The Structure of Matter	9
1.1 Man and Matter: A Relationship of Several Millennia	9
1.2 Atoms	12
1.3 Molecules	16
1.4 Quantum Mechanics	18
1.5 Chemical Bonds	20
1.6 Chemical Reactions	22
1.7 States of Matter	23
2. Chemical Kinetics	25
2.1 Macroscopic and Microscopic Views of Matter	25
2.2 Chemical Kinetics	26
2.3 Rates: Definitions	27
2.4 Experimental Measurement of Rates	27
2.5 Reaction Order	29
2.6 Elementary Reactions	29
2.6.1 Unimolecular Reactions	30
2.6.2 Bimolecular Reactions	30
2.6.3 Trimolecular Reactions	31
2.7 Reversible Reactions	32
2.8 Determination of Rate Constants	33
2.9 Determination of the Mechanisms of Chemical Reactions	35
2.10 Mathematical Evaluation of Concentrations	36
2.11 Catalysts	38

3. Equilibrium Thermodynamics	39
3.1 Why Thermodynamics?	39
3.2 The Science of Fire	40
3.3 A Thermodynamic System: Definitions	42
3.4 Equilibrium Thermodynamics	44
3.5 The Zero Law and the Concept of Temperature	45
3.6 The First Law of Thermodynamics	46
3.6.1 Measurement of Internal Energy	48
3.6.2 Internal Energy Function	50
3.7 The Second Law of Thermodynamics	51
3.7.1 Reversible Processes	51
3.7.2 Irreversible Processes	52
3.7.3 The Birth of the Second Law	53
3.7.4 The Entropy of an Ideal Gas	56
3.7.5 Direction of Change of Entropy	58
3.7.6 Why Does a Cup of Coffee Get Cold?	59
3.8 The Third Law of Thermodynamics	60
3.9 How to Use the Thermodynamic Formalism	60
3.10 The Generalized Thermodynamic Formalism	61
3.10.1 Composition as a New Variable	62
3.10.2 Open Systems	63
3.10.3 Other Thermodynamic Potentials	64
3.10.4 Physical Interpretation of Thermodynamic Potentials	64
3.10.5 Molar Quantities	66
3.11 Chemical Thermodynamics	68
3.11.1 Affinity of a Chemical Reaction	68
3.11.2 Affinity and Progress of a Chemical Reaction	70
3.11.3 Why Does the Smell of Perfume Diffuse?	72
3.11.4 Equilibrium Constant and Heat of Reaction	73
3.12 The Limits of Equilibrium Thermodynamics	75
4. Nonequilibrium Thermodynamics	77
4.1 Introduction	77
4.2 Irreversible Processes	78
4.3 Entropy of a Nonequilibrium System	79
4.4 Entropy Production	80
4.4.1 Change in Time of a Conserved Quantity	81
4.4.2 Change in Time of Local Internal Energy	82
4.4.3 Change in Time of Local Entropy	83

4.5	Linear Thermodynamics of Irreversible Processes	85
4.6	The Onsager Reciprocal Relations	88
4.7	Thermal Diffusion	90
4.8	The Curie-Prigogine Symmetry Law	94
4.9	Diffusion	96
4.10	Discontinuous Systems: Thermal Osmosis	97
4.11	Biological Membranes	101
4.12	The Various Domains of Thermodynamics	104
5	Evolutionary Criteria	107
5.1	Introduction	107
5.2	Evolutionary Criteria for Equilibrium States	107
5.2.1	The Impossibility of Making a Magic Boat	108
5.2.2	A Real Boat	109
5.3	The Evolutionary Criterion for Nonequilibrium Systems—Linear Domain	111
5.3.1	Theorem of Minimum Entropy Production	111
5.4	The Evolutionary Criterion for Steady States Far from Equilibrium	113
6	Stability Criteria	117
6.1	Introduction	117
6.2	Stability of Equilibrium States	118
6.3	Stability of Steady States—Linear Domain	120
6.4	Stability of Steady States—Nonlinear Domain	122
6.5	Benard or Convective Instability	127
6.6	Taylor Instability	129
6.7	Instability in a Chemical Reaction	131
6.8	Order and Entropy	133
	Conclusion to Part I	136
	PART II. A NEW CHEMISTRY	
	Introduction to Part II	139
7	The Birth of the New Chemistry	141
7.1	Introduction	141
7.2	Chemical Oscillations	141

7.3	Thermokinetic Oscillations	142
7.4	Oscillations in Prey-Predator Populations	145
7.5	A Mathematical Approach to Oscillatory Behavior	147
7.6	Periodic Behavior and Space Order in Living Organisms	147
7.7	The Contribution from Thermodynamics	149
7.8	Organized Patterns in Fluids	150
7.9	The Concept of Dissipative Structures	151
8.	The Belousov-Zhabotinski Reaction	155
8.1	A Chemical Clock	155
8.2	How the Chemical Clock Functions	156
8.3	Propagation of Chemical Information	160
8.4	Stripes in a Test Tube	163
8.5	Ambidextrous Chemistry	165
8.6	Erratic Behavior	168
8.7	A Chemical Reaction with Memory	169
8.8	A Chemical Reaction May Perform More Tricks	170
9.	A Mathematical Approach to the New Chemistry	173
9.1	Introduction	173
9.2	A Model for the BZ Reaction: The Oregonator	173
9.3	The Brusselator	175
9.3.1	The Well-Stirred Reactor	175
9.3.2	The Unstirred Brusselator	178
9.4	Bifurcation Theory	180
9.5	The Concept of Stability Revisited	182
9.5.1	Linear Stability Analysis in a Well-Stirred Reaction	182
9.5.2	Stability Analysis in the Presence of Diffusion	185
9.6	Phase Plane Analysis	186
9.6.1	Motion of a Pendulum	187
9.6.2	The Reverse Problem	189
9.6.3	Properties of the Phase Plane	190
9.6.4	Stability Analysis	190
9.7	Phase Plane Analysis of the Brusselator	191
9.7.1	Both Roots Are Real	192
9.7.2	The Roots Are Equal	195
9.7.3	The Roots Are Complex Conjugates	195

9.7.4	Bifurcation Points of the Brusselator	198
9.8	Beyond Unstable Points	199
9.8.1	Brusselator as a Chemical Clock	200
9.8.2	Concentration Waves in the Brusselator	201
9.8.3	Spontaneous Emergence of Spatial Patterns	206
9.8.4	Chaos in the Brusselator	208
9.9	A Simple Model with Memory	209
9.10	Secondary Bifurcations	213
Conclusion to Part II		215
PART III. SELF-ORGANIZATION AND COHERENCE IN BIOSYSTEMS		
Introduction to Part III		219
10.	The Origin of Life	225
10.1	Introduction	225
10.2	The Pioneering Molecules of Life	227
10.2.1	Proteins	228
10.2.2	Nucleic Acids	229
10.3	The Advent of the First Biomolecules	232
10.3.1	Prebiotic Synthesis of Amino Acids	232
10.3.2	Laboratory Syntheses of Nucleotide Fragments	233
10.4	Physico-Chemical Laws Created Nucleic Acids and Proteins	234
10.5	Dissipative Structures and Biopolymer Population Enhancement	236
10.6	Prehistory of the First Living Entities: Molecular Evolution	238
10.6.1	Molecular Selection	239
10.6.2	Hypercycles	241
10.6.3	Compartmentalization	243
11.	Self-Organization at the Cellular Level	247
11.1	Introduction	247
11.2	The Concept of the Cell	247
11.3	Enzymes or Biological Catalysts	249

11.4	The Biological Energy Storage Unit: ATP	253
11.5	The Glycolytic Pathway	255
11.6	The Glycolytic Pathway is a Biological Clock	257
11.6.1	The Molecular Basis of Oscillatory Behavior	258
11.6.2	An Allosteric Model for Glycolytic Oscillations	259
11.7	Memory Effects in Bacteria	264
11.7.1	The Machinery of Protein Synthesis	264
11.7.2	<i>Escherichia coli</i> Copes with Environmental Constraints	266
11.7.3	The Molecular Basis of Enzyme Induction	267
11.7.4	The Induction Process Has a Memory	268
12.	Cellular Communication	271
12.1	Membrane Structure and Intercellular Communication	271
12.2	Cell Membranes	271
12.2.1	Membrane Structure	273
12.2.2	Pumps	274
12.2.3	Channels	275
12.2.4	Receptor Activation	275
12.2.5	Gap Junctions	276
12.3	Slime Mold Aggregation	276
12.3.1	The Experimental Facts	278
12.3.2	The Molecular Basis of the cAMP Signaling System	280
13.	The Development of Organisms	287
13.1	Introduction	287
13.1.1	Differentiation	287
13.1.2	Pattern Formation	288
13.1.3	Morphogenesis	288
13.2	Development of the Embryo	289
13.3	Descriptive Theories of Development	291
13.3.1	Mosaic Theory	291
13.3.2	Reference Point Theory	291
13.3.3	Noninstructive Theory	292

13.4	The Concept of Positional Information	293
13.5	Spontaneous Generation of Polarity in Multicellular Systems	294
13.5.1	The Discrete Model	294
13.5.2	The Continuous Model	297
13.6	Scope and Limitations of Theories of Morphogenesis	301
13.7	Pattern Regulation	304
14.	Self-Organization in Multiple-Unit Systems	307
14.1	Introduction	307
14.2	Self-Organization in Multiple-Unit Systems	308
14.3	Physiology of the Brain	311
14.3.1	Brain Structure	312
14.3.2	Neurons	312
14.3.3	Cell Electricity	316
14.3.4	Synapses	318
14.4	A Neural Network Model for Epileptic Seizures	321
	Conclusion to Part III	328
	References	331
	Index	339
