ENVIRONMENTAL HEALTH CRITERIA FOR ULTRAVIOLET RADIATION

1. SUMMARY AND RECOMMENDATIONS FOR FURTHER STUDIES	10
1.1 Summary	10
1.2 Recommendations for further studies	12
1.2.1 Measurement of ultraviolet radiation from natural and artificial sources	12
1.2.1.1 Measurement devices	12
1.2.1.2 Monitoring of natural sources	13
1.2.1.3 Monitoring of artificial sources	13
1.2.1.4 Development of personal monitoring devices	13
1.2.1.5 Improvement of high intensity sources	13
1.2.2 Effects of UV-B, UV-A, and visible light on cells and their constituents	14
1.2.3 The relationship between ultraviolet radiation and skin cancer	14
1.2.4 Epidemiological studies of skin cancer and ultraviolet radiation deficiency in man	15
1.2.4.1 Non-melanoma skin cancer	15
1.2.4.2 Malignant melanoma	15
1.2.4.3 Identification of populations with an increased risk of skin cancer	15
1.2.4.4 UVR deficiency	15
1.2.5 Studies of the interaction of ultraviolet radiation and environmental chemicals	16
1.2.6 Studies of beneficial effects	16
1.2.7 Control measures and protection	16
1.2.7.1 Control measures	16
1.2.7.2 Sunscreen preparations	17
1.2.7.3 Behavioural modifications	17
2. PROPERTIES AND MEASUREMENT OF ULTRAVIOLET RADIATION	17
2.1 Sources	17
2.1.1 Solar radiation — the biologically active UVR spectrum	17
2.1.1.1 Influence of stratospheric constituents	18
2.1.1.2 Influence of clouds, haze, and smog	18
2.1.1.3 Amount of sea level solar ultraviolet radiation in the biologically active UVR spectrum	20
2.1.2 Artificial sources	21
2.1.2.1 Gas discharge arcs	21
2.1.2.2 Fluorescent lamps	22
2.1.2.3 Carbon arcs	22
2.1.2.4 Quartz halogen lamps	22
2.1.2.5 Oxyacetylene, oxyhydrogen, and plasma torches	23
2.2 Detection and measurement of ultraviolet radiation	23
2.2.1 Units and conversion factors	23

2.2.2	Chemical and biological detectors	24
2.2.2.1	Photographic plates	24
2.2.2.2	Chemical methods	25
2.2.2.3	Biological detectors	25
2.2.3	Physical detectors	25
2.2.3.1	Radiometric devices	25
2.2.3.2	Photoelectric devices	26
2.2.4	Measuring devices	26
3.	BIOLOGICAL EFFECTS OF ULTRAVIOLET RADIATION ON UNICELLULAR ORGANISMS, MAMMALIAN CELLS AND TISSUE, AND INVERTEBRATES	26
3.1	Introduction	26
3.1.1	Absorption spectra	27
3.1.2	Evaluation of administered and absorbed doses	28
3.1.3	Action spectra	28
3.2	The molecular basis of the effects of ultraviolet radiation on living matter	29
3.2.1	Molecular lesions in DNA	29
3.2.2	Consequences of photolesions	30
3.2.3	Repair of UVR-induced lesions	30
3.2.3.1	Prereplication repair	30
3.2.3.2	Repair during or after replication	31
3.2.3.3	SOS repair	31
3.3	Bacteria and yeasts	32
3.3.1	Effects on bacterial cell constituents and macromolecular synthesis	32
3.3.2	Sublethal effects	32
3.3.3	Effects of ultraviolet radiation of wavelengths longer than 280 nm	32
3.3.4	Genetic factors in photosensitivity	33
3.3.5	Repair of photolesions in bacteria	33
3.3.6	Yeasts	33
3.4	Protozoa	34
3.5	Effects on mammalian cells in culture	34
3.5.1	Sublethal effects	34
3.5.2	Effects of UV-A	34
3.5.3	Lesions produced in DNA	35
3.5.3.1	Pyrimidine dimers	35
3.5.3.2	DNA-protein cross-links	35
3.5.4	The consequences of photolesions in mammalian cells	35
3.5.4.1	Inhibition of DNA synthesis	35
3.5.4.2	Chromosome aberrations and mutagenic effects	36
3.5.5	The repair of photolesions	36
3.5.5.1	Photoreactivation	36
3.5.5.2	Excision repair	36
3.5.5.3	Repair during or after replication	37
3.5.5.4	SOS repair	37
3.5.6	Effects on cell-virus relationships	37
3.5.6.1	Sensitivity to viral infection	37
3.5.6.2	Viral transformation	37
3.5.6.3	Activation of viruses	38
3.6	Effects on invertebrates	38
3.6.1	Effects on eggs and embryos of invertebrates	38
3.6.2	Effects on insects	39

3.7 -Modification of the effects of ultraviolet radiation by chemical agents	39
3.7.1 Halogenated analogues	39
3.7.2 Caffeine	39
3.7.3 Furocoumarins	40
3.7.4 Other photosensitizing agents	40
3.7.5 Protection by carotene	41
3.8 Conclusions	41
4. THE BIOLOGICAL ACTION OF ULTRAVIOLET RADIATION ON VERTEBRATE ANIMALS	41
4.1 General aspects	41
4.2 Acute reactions in skin	42
4.2.1 Epidermal changes	42
4.2.2 Erythema and inflammation	43
4.2.3 Tanning	45
4.3 Acute changes in the eye	46
4.3.1 Photokeratitis and photoconjunctivitis	46
4.3.2 Cataracts	47
4.4 Effects of long-term exposure of skin to UVR	50
4.4.1 UVR-induced mutagenesis and carcinogenesis	50
4.4.1.1 Mutagenesis	50
4.4.1.2 Mechanism of UVR carcinogenesis	51
4.4.1.3 Tumour types	51
4.4.2 Species-specificity	54
4.4.3 Ultraviolet radiation as an initiating agent	55
4.5 Interactions between ultraviolet radiation and chemicals	56
4.5.1 Chemically-enhanced photocarcinogenesis	56
4.5.2 Interaction between light and chemical carcinogens	56
4.5.3 UVR-induced carcinogen formation	57
4.6 Physical and quantitative aspects of ultraviolet irradiation in animal studies	57
4.6.1 Carcinogenic action spectrum	57
4.6.2 Dose-response relationships	58
4.6.3 Physical factors influencing UVR carcinogenesis	59
4.7 The immune response to tumour induction	60
5. EFFECTS OF ULTRAVIOLET RADIATION ON MAN	61
5.1 Beneficial effects	61
5.2 Induction of erythema in human skin	63
5.2.1 Action spectra of human skin erythema	64
5.3 Natural protection against erythema-inducing ultraviolet radiation	64
5.3.1 Melanin (see also section 4.2.3)	64
5.3.2 Thickening of the stratum corneum	66
5.4 Solar elastosis and other dermal effects of ultraviolet radiation (see also section 4.2)	66
5.5 Ultraviolet radiation and skin cancer in man (see also section 4.2)	67
5.5.1 Anatomical distribution of skin cancer	68
5.5.2 Occupation and skin cancer	68
5.5.3 Genetics and skin cancer	68
5.5.4 Geographical distribution of non-melanoma skin cancer	69
5.5.5 Dose-response relationship for skin cancer (see also section 4.5.2)	74

5.5.6 Mortality from skin cancer	74
5.5.7 Malignant melanoma	75
5.6 Phototoxic and photoallergic diseases	76
5.6.1 Phototoxicity	76
5.6.2 Photoallergy	78
5.7 Pterygium and cancer of the eye	79
6. EVALUATION OF HEALTH RISKS TO MAN	79
6.1 The significance and extent of different environmental sources of ultraviolet radiation and pathways of exposure	79
6.2 Types of biological effects and their significance for human health	80
6.3 The risk associated with combined exposure with other agents	81
6.4 The population at risk — geographical distribution, genetic influences, and occupation	82
6.5 The reliability and range of known dose-effect and dose-response curves	83
6.5.1 Dose-effect curves for acute skin erythema	83
6.5.2 Averages and limits, minimal and slightly more than minimal erythema doses	85
6.5.3 The "erythema range" effects	86
6.5.4 Dose-response curves for keratoconjunctivitis	86
6.5.5 Dose-response relationship for photocarcinogenesis	86
7. GUIDELINES FOR HEALTH PROTECTION	87
7.1 Range of exposure limits	88
7.1.1 Exposure to solar ultraviolet radiation	88
7.1.2 Occupational exposure to artificial ultraviolet radiation	88
7.1.3 Exposure of general population to artificial ultraviolet radiation	90
7.1.4 Measurement of natural and artificial ultraviolet radiation	90
7.2 Health effects of solar ultraviolet radiation in the general population	91
7.3 UVR deficiency and its prevention	91
7.3.1 Insolation and UV irradiation of built-up areas	91
7.3.2 Sunbathing and air-bathing in the prevention of UVR deficiency	92
7.3.3 Artificial ultraviolet radiation in the prevention of UVR deficiency	92
7.4 Protection against ultraviolet radiation	92
7.4.1 Sunscreen preparations	93
7.4.2 Clothing	93
7.4.3 Behavioural conformity with environment	93
7.4.4 Occupational protection	94
8. REFERENCES	95
