ENVIRONMENTAL HEALTH CRITERIA FOR RADIOFREQUENCY AND MICROWAVES	8
1. SUMMARY AND RECOMMENDATIONS FOR FURTHER STUDIES	10
1.1 Summary	10
1.1.1 Physical characteristics in relation to biological effects	10
1.1.2 Sources and control of exposure	11
1.1.3 Biological effects in experimental animals	12
1.1.4 Power density ranges in relation to health effects	13
1.1.5 Exposure effects in man	13
1.1.6 Health risk evaluation as a basis for exposure limits ..	14
1.2 Recommendations for further studies, exposure limits, and protective measures	14
1.2.1 General recommendations	14
1.2.2 Measurement techniques	15
1.2.3 Safety procedures	15
1.2.4 Biological investigations	16
1.2.5 Epidemiological investigations	16
1.2.6 Exposure limits and emission standards	17
1.2.6.1 Occupational exposure limits	17
1.2.6.2 Exposure limits for the general population	17
1.2.6.3 Emission standards	17
1.2.6.4 Implementation of standards	17
1.2.6.5 Other protective measures	18
1.2.6.6 Studies related to the establishment of limits	18
2. MAGNITUDE OF EXPOSURE TO MICROWAVE AND RF RADIATION AND SOURCES OF CONCERN	18
3. PROPERTIES OF MICROWAVE AND RADIOFREQUENCY (RF) RADIATION	19
3.1 Units of radiation	21
3.2 Other physical considerations	22
4. SOURCES AND CONDITIONS OF EXPOSURE	23
4.1 Natural background sources	23
4.2 Man-made sources	25
4.2.1 Deliberate emitters	25
4.2.2 Sources of unintentional radiation	32
4.3 Estimating exposure levels	35
4.3.1 Far-field exposure	35
4.3.2 Near-field exposure	35
4.4 Facilities for controlled exposure	36
4.4.1 Free space standard field method	37
4.4.2 Guided wave methods	38
4.4.3 Standard probe method	39
5. MEASURING INSTRUMENTS	40
5.1 General principles	40
5.2 Types of instruments in common use	41

5.2.1 Diode rectifier	41
5.2.2 Bolometer	41
5.2.3 Thermocouple	42
6. MICROWAVE AND RF ENERGY ABSORPTION IN BIOLOGICAL SYSTEMS	42
6.1 Methods of computation	43
6.2 Experimental methods	43
6.3 Energy absorption	44
6.4 Molecular absorption	48
7. BIOLOGICAL EFFECTS IN EXPERIMENTAL ANIMALS	49
7.1 Hyperthermia and gross thermal effects	50
7.2 Effects on the eye	54
7.3 Neuroendocrine effects	58
7.4 Nervous system and behavioural effects	62
7.5 Effects on the blood forming and immunocompetent cell systems	70
7.6 Genetic and other effects in cell systems	73
7.7 Effects on reproduction and development	76
8. HEALTH EFFECTS IN MAN	79
8.1 Effects of occupational exposure	80
8.1.1 Effects on the eyes	82
8.1.2 Effects on reproduction and genetic effects	82
8.1.3 Cardiovascular effects	82
8.2 Medical exposure	83
9. RATIONALES FOR MICROWAVE AND RF RADIATION PROTECTION STANDARDS	83
9.1 Principles	83
9.2 Group 1 standards	84
9.3 Group 2 standards	85
9.4 Group 3 standards	90
9.5 RF radiation standards (100 kHz to 300 MHz)	93
10. SAFETY PROCEDURES FOR OCCUPATIONALLY EXPOSED PERSONNEL	102
10.1 Procedures for reducing occupational exposure	102
11. ASSESSMENT OF DATA ON BIOLOGICAL EFFECTS AND RECOMMENDED EXPOSURE LIMITS	104
