

Contents of Volume 1

PREFACE

vii

1	HISTORICAL REVIEW OF RADIATION PROTECTION AND CONTROL CONCEPTS AND REQUIREMENTS	1
1-1	Earliest Concepts	1
1-2	Functions of Radiation-protection Organizations	4
1-3	Development of Codes, Standards, and Regulations	7
1-4	Administrative Aspects of a Radiation Protection and Control Program	14
1-5	Technical and Scientific Aspects of a Radiation Protection and Control Program	14
1-6	Legal and Regulatory Aspects of a Radiation Protection and Control Program	15
1-7	Development of Educational Programs	16
2	RADIATION PROTECTION AND CONTROL GUIDES	21
2-1	Introduction	21
2-2	Radiation Guides	21
2-3	Radiation Protection and Control Measures	145
2-4	Policy and Guidelines	164
3	INSTRUMENTS FOR RADIATION DETECTION AND MEASUREMENT	198
3-1	Principles of Radiation Detection and Measurement	198
3-2	Primary Radiation Instruments	215
3-3	Secondary Radiation Instruments	223
3-4	General Instrument-calibration Principles	253
3-5	Instrument–Dose Response Relation	268

4	DESIGN OF NUCLEAR FACILITIES	354
4-1	General Principles of Nuclear-facility Design	355
4-2	Design of Radioactive Material Laboratories	382
4-3	Facilities for Large Sealed Radioisotope Sources	397
4-4	Maintenance Considerations in Plant Design	403
5	AIR SAMPLING	411
5-1	Basic Objectives of Air Sampling	411
5-2	Physical Composition, Magnitude, and Biological Significance of Air Contaminants	412
5-3	Criteria for Effective Air Sampling	421
5-4	General Problems in Air Sampling	437
5-5	Filter Media and Air-sampling Devices	451
6	ENVIRONMENTAL ANALYSIS AND BIOASSAY	478
6-1	Introduction	478
6-2	Environmental Analyses	478
6-3	Bioassay	506
