Preface	iii
Acknowledgements	vi
1. Introduction	1
1.1 Definitions and Specifications	1
1.2 Brief History	2
1.3 Scope of Report	4
2. Human Anatomy	6
2.1 General	6
2.2 Body Mass and External Dimensions	8
2.2.1 The Adult	8
2.2.2 Fetus, Infant and Child	9
2.3 Principal Organs and Tissues	10
3. Selection Requirements for Phantoms	16
3.1 Radiation-Related Requirements	16
3.2 Non Radiation-Related Requirements	20
3.3 Safety Requirements	20
4. Phantoms in Radiotherapy	21
5. Phantoms in Diagnostic Procedures	26
5.1 Radiological Imaging	26
5.2 Nuclear Medicine	28
5.3 Bone Mineral Analysis	29
6. Phantoms in Radiation Protection	31
7. Phantoms in Radiobiology	33
8. Computational Models	35
8.1 Selection Requirements	35
8.2 Types of Models	35
8.3 Radiation Transport Codes	42
8.4 Applications	43
9. Conclusions	46
9.1 Concluding Remarks	46
9.2 Recommendations	46
Appendix A: Human Anatomical Data	47
Appendix B: Specifications of Phantoms	60
Appendix C: Specifications of Computational Models	149
Appendix D: Fabrication Techniques	162
Appendix E: Quality Assurance	165
References	166
Acknowledgements for Photographs Used in Tables B.2 and C.2	187
ICRU Reports	189
Index	192
