Preface	iii
Glossary	ix
1. Introduction	1
1.1 Purpose and Scope	1
1.2 Definition of Stopping Power and Related Quantities	1
1.3 Methods Used for the Evaluation of Stopping Powers	4
1.4 Utility and Limitations of Stopping Powers	4
1.4.1 Continuous-Slowing-Down and Straight-Ahead Approximations	4
1.4.2 Distinction between Energy Loss and Energy Deposition	5
2. Electronic (Collision) Stopping Powers from Bethe's Theory	6
2.1 Stopping-Power Formula	6
2.2 Bloch Correction	6
2.3 Barkas Correction	7
2.4 Shell Corrections	10
2.4.1 Shell Corrections from Model 1	10
2.4.2 Shell Corrections from Model 2	11
2.5 Mean Excitation Energies	12
2.5.1 Mean Excitation Energies for Elements	12
2.5.2 Mean Excitation Energies for Compounds	15
2.6 Density-Effect Correction	17
3. Electronic (Collision) Stopping Powers in the Low-Energy Region	18
3.1 Available Experimental and Theoretical Information	18
3.2 Chemical-Binding and Phase Effects	18
3.3 Input Data Used for Protons	23
3.4 Input Data Used for Alpha Particles	33
3.5 Merging of Theoretical and Experimental Stopping Power Curves	40
4. Nuclear Stopping Powers	41
4.1 Screened Coulomb Potential	41
4.2 Elastic-Scattering Cross Section	41
4.3 Scaled Nuclear Stopping Powers	43
4.4 Angle-Restricted Nuclear Stopping Powers	47
5. Comparison of Tabulated and Experimental Stopping Powers	48
5.1 Comparisons for Protons	48
5.2 Comparisons for Alpha Particles	48
6. Energy-Loss Straggling	61
6.1 Energy-Loss Straggling in Long Track Sections	61
6.2 Energy-Loss Straggling in Moderately Short Track Sections	62
6.3 Energy-Loss Straggling in Very Short Track Sections	64

7. Ranges and Detour Factors	69
7.1 Csda Ranges	69
7.2 Range Straggling	71
7.3 Detour Factors	72
8. Stopping-Power and Range Tables.....	76
8.1 Tables for Negatively-Charged Pions.....	76
8.2 Main Tables for Protons and Alpha Particles.....	76
9. Description of Methods for Stopping-Power Measurements	82
9.1 Interposition of Foil or Gas in Primary or Scattered Beams...	82
9.1.1 Use of Accelerated Ions.....	82
9.1.2 Use of Natural Radioactive Sources.....	86
9.2 Shift in Energy of Elastically-Scattered Particles	87
9.3 Use of the Intensity of Elastic Scattering from a Thick Target.....	91
9.4 Thermometric-Compensation Technique at Liquid-He Temperatures.....	94
9.5 Use of a Differentially-Pumped Gas Cell.....	95
9.6 Inverted-Doppler-Shift-Attenuation (IDSA) Method	96
9.7 Use of Nuclear Reaction Resonance to Measure Particle Energy	99
9.8 Time-of-Flight Technique	99
9.9 High-Energy Stopping-Power Measurements	101
9.9.1 Protons and Alpha Particles from Cyclotrons or from Linear Accelerators	101
9.9.2 Heavy Ions from Tandem Van de Graaffs or from Linear Accelerators	101
9.10 Other Methods	102
9.10.1 Use of Characteristic X-Ray Emission Yields.....	102
9.10.2 Analysis of Doppler-Shifted Gamma-Ray Line from De-Excitation of Recoil Nuclei Produced in Coulomb Excitation	102
9.10.3 Intercomparison of Gamma-Ray Yields or Neutron Yields from Thin and Thick Targets	103
9.10.4 Recoil-Proton Techniques	103
9.10.5 Other Methods Involving Nuclear Reactions.....	103
9.10.6 Additional Methods	105
Main Proton Tables.....	107
Main Alpha Particle Tables	183
References	258
ICRU Reports.....	280
Index	284
