Preface	x
1 The structure of matter	1
1.1 Introduction	1
1.2 The atom	1
1.3 The structure of the atom	2
1.4 Mass number	4
1.5 Atomic number	4
1.6 Isotopes	5
1.7 Ancient and modern theories	6
2 Radioactivity and radiation	8
2.1 Introduction	8
2.2 Alpha, beta and gamma radiation	8
2.3 The electronvolt	10
2.4 The mechanism of radioactive decay	10
2.5 Natural radioactive series	13
2.6 Induced radioactivity	13
2.7 The unit of radioactivity	14
2.8 The nuclide chart	16
2.9 Interaction of radiation with matter	18
2.10 Penetrating powers of nuclear radiations	19
3 Radiation units	23
3.1 Absorption of energy	23
3.2 Ionization	23
3.3 Radiation absorbed dose	25

3.4	Dose equivalent	25
3.5	Submultiples	27
3.6	Dose rate	28
3.7	Flux	28
3.8	Relationship of units	30
4	Biological effects of radiation	33
4.1	Introduction	33
4.2	Basic human physiology	33
4.3	Cell biology	36
4.4	The interaction of radiation with cells	37
4.5	The somatic effects of radiation	39
4.6	The hereditary effects of radiation	42
4.7	Discussion	44
5	Natural and man-made radiation	47
5.1	Introduction	47
5.2	Cosmic radiation	47
5.3	Radiation from terrestrial sources	48
5.4	Radioactivity in the body	48
5.5	Summary of doses due to natural radiation	49
5.6	Man-made sources of radiation	50
5.7	Current sources of man-made radiation	51
5.8	Summary of current sources of radiation	53
6	The system of dose limitation	55
6.1	The role of the ICRP	55
6.2	Recommendations of ICRP (publication 26, 1977)	57
6.3	Recommended dose equivalent limits for workers	58
6.4	Notes on the dose equivalent limits for workers	60
6.5	Recommended dose equivalent limits for individual members of the public	61
6.6	Planned special exposures	62
6.7	Abnormal exposures in emergencies or accidents	62
7	Radiation detection and measurement	67
7.1	General principles	67
7.2	Ionization of a gas	67

7.3	Solid state detectors	70
7.4	Photographic effect	72
7.5	Activation effect	74
7.6	Electrical circuits	74
8	The external radiation hazard	82
8.1	Source of the hazard	82
8.2	Time	82
8.3	Distance	85
8.4	Shielding	86
8.5	Neutron sources	90
8.6	Personal dose control	92
8.7	Radiation survey monitoring	94
8.8	Personnel monitoring equipment	96
8.9	Radiation records	101
9	The internal radiation hazard	105
9.1	Uncontained radioactivity	105
9.2	Routes of entry	105
9.3	Annual limits of intake	109
9.4	Control of the contamination hazard	112
9.5	Routine control of contamination	114
9.6	Radiotoxicity and laboratory classifications	118
9.7	Design of areas for radioactive work	119
9.8	Treatment of contaminated personnel	123
9.9	Contamination monitoring	125
10	Nuclear reactor health physics	131
10.1	Introduction	131
10.2	Fission	131
10.3	Reactor systems	136
10.4	Refuelling reactors	141
10.5	Radiation hazards from reactors	142
10.6	Research reactors	149
10.7	Fuel storage ponds	149
10.8	Fuel reprocessing	151

11	Radioactive waste	154
11.1	Introduction	154
11.2	Consequences of releases of radioactivity	155
11.3	Radioactive liquid waste	158
11.4	Radioactive gaseous waste	159
11.5	Radioactive solid waste	161
11.6	Regulations	163
12	X-rays and radiography	165
12.1	Introduction	165
12.2	X-ray equipment	166
12.3	Quality and intensity of X-rays	169
12.4	Protection against X-rays	170
12.5	Monitoring of X-ray installations	173
13	Radiation protection in medicine	176
13.1	Applications	176
13.2	General principles and organization	177
13.3	Protection against sealed sources	178
13.4	Protection against unsealed sources	184
13.5	Control and disposal of radioactive materials	186
14	Legislation and other regulations related to radiological protection	189
14.1	Introduction	189
14.2	The common law	189
14.3	History of legislation	190
14.4	Regulatory framework under the HSW Act	194
14.5	Summary of UK regulations	196
14.6	Brief summary of international guidance and regulations in other countries	196
15	Health physics laboratory techniques	201
15.1	Basic techniques	201
15.2	Radioassay	201
15.3	Calibration of radiation monitors	212

16 Radiological emergencies	218
16.1 Introduction	218
16.2 Loss of shielding	219
16.3 Loss of containment	220
16.4 Uncontrolled criticality	223
16.5 Pre-planning for emergencies	226
17 The organization and administration of health physics services	228
17.1 The overall process	228
17.2 Standards, regulations and codes	228
17.3 Design and operation	229
17.4 The health physics organization	230
17.5 Documents and reports	231
17.6 Training	232
Appendix Relationship of units	234
Answers to numerical questions	235
Bibliography	237
Index	241
