## Contents

Introduction . . . . .	v
<b>Chapter 1 Radioactive Decay . . . . .</b>	<b>1</b>
<b>Radiations emitted . . . . .</b>	<b>1</b>
<i>Alpha particle</i> 1	
<i>Beta particle</i> 3	
<i>Gamma photon</i> 5	
<i>Conversion electron</i> 5	
<i>X-ray photon</i> 5	
<i>Positron</i> 6	
<i>Annihilation radiation</i> 6	
<i>Electron capture</i> 7	
<i>Fission products</i> 7	
<i>Delayed neutron</i> 7	
<b>Decay schemes . . . . .</b>	<b>7</b>
<b>Decay rate . . . . .</b>	<b>13</b>
<b>Half-life . . . . .</b>	<b>14</b>
<b>Specific activity . . . . .</b>	<b>16</b>
<b>The curie . . . . .</b>	<b>19</b>
<b>Dose rate . . . . .</b>	<b>20</b>
<b>Inverse square law . . . . .</b>	<b>22</b>
<b>Decay heat . . . . .</b>	<b>22</b>
<b>Problems . . . . .</b>	<b>23</b>
<b>Chapter 2 Interaction of Radiation with Matter . . . . .</b>	<b>25</b>
<b>Alpha particles . . . . .</b>	<b>25</b>
<i>Ion pair formation</i> 26	
<i>Range vs energy</i> 27	
<b>Beta particles . . . . .</b>	<b>28</b>
<i>Ion pair formation</i> 29	
<i>Secondary ionization</i> 29	
<i>Bremsstrahlung</i> 30	
<i>Half-thickness</i> 31	

<b>Gamma photons . . . . .</b>	<b>31</b>
<i>Photoelectric effect</i> 31	
<i>Compton scattering</i> 31	
<i>Pair production</i> 32	
<i>Exponential absorption</i> 33	
<i>Mass absorption coefficient</i> 33	
<i>Linear absorption coefficient</i> 33	
<b>Neutrons . . . . .</b>	<b>37</b>
<i>Thermal neutrons</i> 37	
<i>Epithermal neutrons</i> 37	
<i>Fast neutrons</i> 37	
<i>Nuclear interaction</i> 38	
<i>Scattering</i> 38	
<i>Capture</i> 38	
<i>Cross section</i> 39	
<i>Exponential absorption</i> 39	
<b>Problems . . . . .</b>	<b>40</b>
<b>Chapter 3 Detection of Radiation . . . . .</b>	<b>41</b>
<b>Gas filled detectors . . . . .</b>	<b>41</b>
<i>Gas ionization</i> 42	
<i>Electric field gradient</i> 45	
<i>Gas amplification</i> 46	
<i>Voltage pulse</i> 46	
<i>Ionization chamber</i> 47	
<i>Proportional counter</i> 47	
<i>Geiger-Muller counter</i> 47	
<i>Pulse spectrum</i> 49	
<i>Voltage plateau</i> 53	
<i>Resolving time</i> 54	
<i>Counting efficiency</i> 57	
<i>Physical geometry</i> 58	
<i>Backscattering</i> 59	
<i>Intrinsic efficiency</i> 59	
<b>Gamma spectrometry using sodium iodide crystals . . . . .</b>	<b>61</b>
<i>Differential pulse height spectrum</i> 62	
<i>Single channel analyzer</i> 62	
<i>Multichannel analyzer</i> 63	
<i>Photopeak resolution</i> 65	
<i>Representative spectra</i> 68	
<i>Counting efficiency</i> 72	
<b>Gamma spectrometry using germanium crystals . . . . .</b>	<b>74</b>
<i>Resolution</i> 74	
<i>Counting efficiency</i> 74	

<i>Homogeneous detectors</i>	75
<i>Junction detectors</i>	75
<i>Statistical limitation on resolution</i>	80
<b>Neutron detectors . . . . .</b>	<b>82</b>
<i>Boron interaction</i>	83
<i>Proton scattering</i>	83
<i>Fission</i>	83
<i>Helium-3</i>	84
<i>Scintillation techniques</i>	84
<i>Activation of foils</i>	85
<b>Problems . . . . .</b>	<b>86</b>
<b>Chapter 4 Quantitative Measurement of Radiation . . . . .</b>	<b>88</b>
<i>Counting efficiency . . . . .</i>	<i>88</i>
<i>Precision . . . . .</i>	<i>89</i>
<i>Standard deviation . . . . .</i>	<i>89</i>
<i>Variance . . . . .</i>	<i>89</i>
<i>Poisson distribution . . . . .</i>	<i>90</i>
<i>Normal distribution . . . . .</i>	<i>91</i>
<i>Confidence level . . . . .</i>	<i>93</i>
<i>Confidence limits . . . . .</i>	<i>93</i>
<i>Control chart . . . . .</i>	<i>94</i>
<i>Precision of net count . . . . .</i>	<i>96</i>
<i>Chi square test . . . . .</i>	<i>97</i>
<i>Precision vs accuracy . . . . .</i>	<i>98</i>
<b>Chapter 5 The Literature of Radiation Detection . . . . .</b>	<b>101</b>
<b>Appendix . . . . .</b>	<b>105</b>
<b>Index . . . . .</b>	<b>109</b>
