

CONTENTS

DEFINITIONS	11
1. INTRODUCTION	11
Purpose (101–102)	11
Scope (103–106)	11
2. SAFETY PHILOSOPHY	12
Safety objectives (201–203)	12
Defence in depth (204–209)	12
3. GENERAL DESIGN CRITERIA	14
Radiation protection (301–304)	14
Safety functions (305–307)	14
Plant safety characteristics (308–309)	15
Design basis (310–314)	15
Severe accidents (315–317)	17
Quality of plant (318–321)	17
Provision for in-service testing, maintenance, repair, inspection and monitoring (322–323)	18
Design for system and component reliability (324–346)	18
Design for optimized operator performance (347–353)	23
Heat transfer to an ultimate heat sink (354–356)	24
Protection against fire and explosion (357–359)	24
Effects associated with equipment failures (360–361)	25
Sharing of structures, systems and components in multi-reactor nuclear power plants (362)	25
Systems containing fissionable or radioactive materials (363)	25
Escape routes and means of communication (364–366)	25
Control of access to the nuclear power plant (367)	26
Decommissioning (368)	26
4. REACTOR CORE	26
Reactor design (401–402)	26
Fuel elements (403–405)	27

	Reactor core control (406)	27
	Reactor shutdown (407–414)	27
5.	REACTOR COOLANT SYSTEM	28
	Reactor coolant system design (501–505)	28
	Primary pressure boundary in-service inspection (506–509)	29
	Reactor coolant inventory (510)	30
	Reactor coolant cleanup (511)	30
	Residual heat removal from the core (512–513)	30
	Emergency core cooling (514–515)	30
	Emergency core cooling system inspection and testing (516)	31
6.	INFORMATION AND CONTROL FACILITIES	31
	General requirements (601–603)	31
	Control room (604–606)	32
	Supplementary control point (607)	32
	Emergency control centre (608)	33
7.	PROTECTION SYSTEM	33
	Protection system functions (701)	33
	Protection system reliability and testability (702–705)	33
	Separation of protection and control systems (706)	34
8.	EMERGENCY POWER SUPPLY (801–803)	34
9.	CONTAINMENT SYSTEM	35
	Purpose of containment system (901–902)	35
	Containment structure strength (903)	35
	Containment leakage (904–905)	35
	Capability for containment pressure tests (906)	36
	Containment penetrations (907–908)	36
	Containment isolation (909–911)	36
	Containment air locks (912–913)	37
	Containment internal structures (914)	37
	Containment heat removal (915)	37
	Containment atmosphere cleanup (916–917)	37
	Coverings and coatings (918)	38

10. RADIATION PROTECTION	38
Principles (1001–1002)	38
Design for radiation protection (1003–1007)	38
Means of radiation monitoring (1008–1009)	39
Radioactive waste treatment (1010–1011)	40
Control of release of liquid radioactive material to the environment (1012)	40
Control of airborne radioactive material (1013–1014)	40
11. FUEL HANDLING AND STORAGE SYSTEMS	41
Unirradiated fuel handling and storage (1101)	41
Irradiated fuel handling and storage (1102)	41
12. DESIGN CONFIRMATION	42
Safety analysis (1201–1205)	42
Equipment qualification (1206–1207)	43
Quality assurance (1208)	43
APPENDIX: Postulated Initiating Events (PIEs)	44
LIST OF PARTICIPANTS	47
LIST OF NUSS PROGRAMME TITLES	51
SELECTION OF IAEA PUBLICATIONS RELATING TO THE SAFETY OF NUCLEAR POWER PLANTS	55
