|                                                                                                     |    |
|-----------------------------------------------------------------------------------------------------|----|
| DEFINITIONS .....                                                                                   | 1  |
| 1. INTRODUCTION (101-110) .....                                                                     | 7  |
| 2. GENERAL .....                                                                                    | 8  |
| Purpose and scope (201-202) .....                                                                   | 8  |
| Role of the applicant (203) .....                                                                   | 9  |
| Role of the regulatory body (204) .....                                                             | 9  |
| 3. CRITERIA .....                                                                                   | 9  |
| Objective (301) .....                                                                               | 9  |
| General criteria (302-315) .....                                                                    | 10 |
| Criteria for design basis for external natural events (316-322) .....                               | 11 |
| Criteria for design basis for external man induced events (323-327) ....                            | 12 |
| Criteria for defining potential effects of the nuclear power plant on the<br>region (328-331) ..... | 13 |
| Criteria derived from population and emergency planning considerations<br>(332-334) .....           | 13 |
| 4. EVALUATION OF DESIGN BASIS FOR EXTERNAL EVENTS .....                                             | 14 |
| Floods due to precipitation and other causes (401-404) .....                                        | 14 |
| Water waves induced by earthquakes (405-409) .....                                                  | 15 |
| Floods and waves caused by failure of water control structures<br>(410-413) .....                   | 15 |
| Surface faulting (414-417) .....                                                                    | 16 |
| Slope instability (418-420) .....                                                                   | 16 |
| Site surface collapse, subsidence or uplift (421-423) .....                                         | 17 |
| Earthquakes (424-428) .....                                                                         | 17 |
| Soil liquefaction (429-431) .....                                                                   | 18 |
| Tornadoes (432-435) .....                                                                           | 18 |
| Tropical cyclones (436-439) .....                                                                   | 18 |
| Other important natural phenomena and extreme conditions (440) .....                                | 19 |
| Aircraft crashes (441-444) .....                                                                    | 19 |
| Chemical explosions (445-447) .....                                                                 | 19 |

|                                                                                                           |           |
|-----------------------------------------------------------------------------------------------------------|-----------|
| Site related parameters affecting long term heat removal from the core<br>(448–450) .....                 | 20        |
| Other important man induced events (451) .....                                                            | 20        |
| Behaviour of foundation materials (452–453) .....                                                         | 20        |
| <b>5. SITE CHARACTERISTICS INFLUENCING THE EFFECTS OF THE<br/>NUCLEAR POWER PLANT ON THE REGION .....</b> | <b>21</b> |
| Atmospheric dispersion of radioactive materials (501–504) .....                                           | 21        |
| Dispersion of radioactive materials through surface water (505–507) ....                                  | 21        |
| Dispersion of radioactive materials through groundwater (508–510) .....                                   | 22        |
| Population distribution (511–514) .....                                                                   | 22        |
| Uses of land and water in the region (515) .....                                                          | 23        |
| Ambient radioactivity (516) .....                                                                         | 23        |
| <b>LIST OF PARTICIPANTS .....</b>                                                                         | <b>25</b> |
| <b>LIST OF NUSS PROGRAMME TITLES .....</b>                                                                | <b>29</b> |
| <b>SELECTION OF IAEA PUBLICATIONS RELATING TO THE<br/>SAFETY OF NUCLEAR POWER PLANTS .....</b>            | <b>33</b> |
