## *Preface*

Chapter 1	<b>High energy particle interactions</b>	
1.1	Properties of high energy particles	
1.1.1	High energy particle types	1
1.1.2	Energy and momentum	1
1.1.3	Ionisation by high energy charged particles	3
1.1.4	Charged particle range	4
1.1.5	Nuclear interactions	6
1.1.6	Units and conversion factors	9
1.1.7	The significance of radiation levels	10
1.2	Secondary radiation from high energy interactions	
1.2.1	Radiation fields	11
1.2.2	Multiplicity and energy of secondaries in an interaction	13
1.2.3	The number and energy of secondaries in a cascade	17
1.2.4	The number of high energy particle interactions	20
1.2.5	Secondary particle fluence build-up in an absorber	20
1.3	The dose due to high energy particle interactions	
1.3.1	Dose in a charged particle beam	22
1.3.2	Absorbed dose near a target in a proton beam	23
1.3.3	Radiation damage to accelerator materials	25
1.3.4	Conversion of hadron fluence to dose equivalent	26
1.3.5	Dose equivalent in a beam	28
1.3.6	Dose equivalent near a target	29
1.3.7	Dose equivalent rate near a beam line	30
1.3.8	Dose near targets of different materials	31
	References	33

<b>Chapter 2</b>	<b>Shielding for high energy particle accelerators</b>	
2.1	Shielding for high energy protons	
2.1.1	Radiation attenuation in a shield	35
2.1.2	Source terms for shielding calculations	35
2.1.3	Dose build-up in an absorber	38
2.1.4	Beam line shields	39
2.1.5	Dose equivalent outside beam dumps	43
2.2	Shielding for protons below 1 GeV	
2.2.1	The secondary radiation distribution	45
2.2.2	Source terms for shielding calculations	49
2.2.3	Secondary particle attenuation	52
2.3	Shielding for muons	
2.3.1	Muon production	54
2.3.2	Muon attenuation	54
2.3.3	Ranging out the muons	56
2.3.4	Angular distribution of muons	57
2.3.5	Muon beam strength	59
2.3.6	Isofluence contours	60
2.4	Radiation transmission through holes and chicanes in a shield	
2.4.1	Radiation at the entrance to a hole in a shield	61
2.4.2	Radiation scatter down holes in a shield	63
2.4.3	Transmission down multi-legged chicanes	67
2.5	Skyshine	
2.5.1	Neutron dose rate at a distance	71
	References	73
<b>Chapter 3</b>	<b>Shielding for high energy electron machines</b>	
3.1	Electron interactions	
3.1.1	Critical energy	75
3.1.2	Radiation length	75
3.1.3	Nuclear interactions by electrons	76

	3.1.4 Radiation near a target in an electron beam	76
3.2	Shielding for high energy electrons	
	3.2.1 Source terms for shielding calculations	77
	3.2.2 Muons from electron beams	79
	3.2.3 Secondary particle attenuation	81
3.3	Low energy electrons	
	3.3.1 X ray production	83
	3.3.2 X ray attenuation	85
3.4	Synchrotron radiation	
	3.4.1 The production of synchrotron radiation	86
	3.4.2 Synchrotron radiation energy	86
	3.4.3 The synchrotron energy spectrum	88
	3.4.4 Synchrotron radiation levels	89
	3.4.5 Dose rate outside the vacuum chamber	90
	References	91
Chapter 4	<b>Radioactivity induced in high energy particle accelerators</b>	
4.1	Properties of induced radioactivity	
	4.1.1 High energy particle activation	93
	4.1.2 The activity produced in an interaction	94
	4.1.3 Relation between activity and gamma ray dose rate	96
	4.1.4 Shielding for induced activity gamma dose	100
	4.1.5 Dose from beta activity	101
	4.1.6 Ratio between beta and gamma dose	103
4.2	Radioactivity in targets and dumps	
	4.2.1 Radioactivity induced by high energy particle interactions	103
	4.2.2 Radioactivity in iron and copper targets	104

## Contents

4.2.3	Dose rate from targets and beam dumps	105
4.2.4	Effective half-life	107
4.2.5	Activation of heavy element targets	110
4.2.6	Comparison of calculated dose rates with measurements	112
4.2.7	Beta dose from thin targets	113
4.3	Activation by secondary hadrons	
4.3.1	Activating particles	114
4.3.2	High energy particle activation	116
4.3.3	Activation by thermal neutrons	119
4.3.4	The activation of aluminium	124
4.3.5	The activation of concrete	125
4.3.6	Earth activation	128
4.4	Accelerator activation	
4.4.1	Total activity in an accelerator	132
4.4.2	Induced activity dose rate near a beam line	134
4.4.3	Activation in high energy electron accelerators	135
4.5	Activation of air and water	
4.5.1	Radioactivity production in air and water	137
4.5.2	Air and water activation in electron machines	138
4.5.3	Dose rates from activated air and water	141
4.5.4	Passage of radioactive air through a ventilation system	142
4.5.5	Activity concentration and dose rate from a release of radioactive air	145
4.5.6	Activation of cooling water	148
	References	150
