

CONTENTS

	<i>Paragraphs</i>
INTRODUCTION	1-7
I. HISTORICAL REVIEW	8-135
A. General considerations	8-10
B. Concepts, quantities and units	11-41
1. Activity	12-14
2. Radiation dose	15-24
3. Development of dosimetric concepts	25-40
C. Dose assessments	42-85
1. Natural sources of radiation	42-44
2. Nuclear explosions	45-56
3. Nuclear power production	57-62
4. Medical exposures	63-70
5. Occupational exposures	71-76
6. Miscellaneous exposures	77-80
7. Accidents and incidents	81-85
D. Risk assessments	86-135
1. Hereditary harm	86-95
2. Cancer	96-116
3. Non-stochastic effects	117-127
4. Other types of harm	128-135
II. THE PRESENT SITUATION	136-270
A. Radiation levels and doses	136-185
1. Natural sources of radiation	136-141
2. Nuclear explosions	142-145
3. Nuclear power production	146-159
4. Medical exposures	160-166
5. Occupational exposures	167-169
6. Miscellaneous exposures	170
7. Accidents	171-173
8. The Chernobyl accident	174-185
B. Radiation effects	186-232
1. Hereditary harm	186-191
2. Radiation carcinogenesis in man	192-210
3. Early effects in man of high doses of radiation	211-229
4. Effects of pre-natal irradiation	230-232
C. Derivation of risk coefficients	233-252
1. Hereditary harm	237-243
2. Cancer	244-252
D. Comparison of exposures	253-270
1. Previous UNSCEAR comparisons	253-256
2. Purpose of comparisons	257
3. Comparison of collective doses	258-259
4. Comparison of individual doses	260-261
5. Summary of dose comparisons	262-264
6. Direct comparison of detriments	265-270
<i>Appendices</i>	<i>Pages</i>
I. Members of national delegations	43
II. Scientific staff and consultants who have co-operated with the Committee in the preparation of this report	44
III. Reports received by the Committee	45
