

TABLE OF CONTENTS

PART I

SOURCES OF TRITIUM

Chapter 1	
Natural Sources	5
Chapter 2	
Artificial Sources.....	7
I. Thermonuclear Detonations	7
II. Fission Nuclear Reactors.....	7
A. Light Water Reactors (LWR).....	8
B. Heavy Water Reactors (HWR)	9
C. Tritium Emissions from Reactors.....	12
D. Fuel-Reprocessing Plants	12
III. Fusion Nuclear Reactors	14
Chapter 3	
The Evolution of the World Tritium Inventory	19
References.....	22

PART II

PROCESSES AND PLANTS FOR TRITIUM ISOTOPE SEPARATION

Chapter 4	
Enrichment of Tritium for Analytical Purposes	29
I. Water Electrolysis.....	29
II. Water Distillation	33
III. Thermal Diffusion	35
IV. Permeation Through Membranes.....	55
V. Adsorption and Chromatography.....	58

Chapter 5

Recovery and Enrichment of Tritium from

Nuclear Plants	61
I. Water Distillation	62
A. Sulzer Tritium Extraction Plant from Light Water by Vacuum Distillation	66
1. Pressurized Water Reactor	67
2. Feed System	67
3. Column	67
4. Return Line	68
5. Bleed-Off System	69
6. Vacuum System	69
B. Other Research	69
II. Hydrogen Distillation	71
III. Water Electrolysis	73
IV. Chemical Exchange	74
V. Vapor-Phase Catalytic Exchange (VPCE) and Cryogenic Distillation (CD)	75
A. Removal of Tritium	75
B. Removal of Hydrogen	75
C. Principal Design Data for TRF	80
D. Front-End System	80
E. Cryogenic Distillation	82
F. Building Structure	83
G. Tritium Production	83
VI. Liquid-Phase Catalytic Exchange (LPCE) and Cryogenic Distillation	84
A. Process Description	85
VII. Combined Electrolysis-Catalytic Exchange (CECE) and Cryogenic Distillation	88
VIII. Direct Electrolysis (DE) and Cryogenic Distillation	90
IX. Combined Electrolysis-Catalytic Exchange	91
A. Catalytic Exchange	91
B. Electrolysis	92
C. Preliminary Results	93
D. Preparation of Hydrophobic Catalysts	95

E.	The Catalytic Activities	95
F.	The Gas-Liquid Separation Column	96
X.	Thermal Diffusion	104
XI.	Liquid-Liquid Extraction.....	113
A.	Experimental	114
B.	Single-Stage Separation Factor	115
Chapter 6		
Recovery and Enrichment of Tritium from		
Thermonuclear Plants		
I.	Fuel Cycle System for D-T Burning Fusion Reactor	119
A.	Reactor Cooling and Tritium Recovery System.....	119
B.	Mainstream Fuel Circulation System	119
C.	Tritium Containment System	120
D.	Tritium Recovery and Waste Treatment System	120
E.	Tritium Production System	120
II.	Roles of Stage Processes in Fuel Cycle System.....	121
A.	Cryogenic Distillation System	121
B.	Cryogenic Falling Liquid Film Condenser (Helium Separator)	121
C.	Water/Hydrogen Exchange Column	121
D.	Cascade Composed of Separate Elemental Stages	123
III.	Hydrogen Isotope Distillation	123
A.	Tritium Systems Test Assembly (TSTA).....	123
B.	The Isotope Separation System (ISS).....	124
1.	Product Streams.....	126
2.	Feed Streams	127
3.	Equilibrators	127
4.	Tritium Inventory	128
5.	Column Pressure.....	128
6.	Refrigeration Cycle	128
7.	Computer Control.....	129
8.	Design Method	129
9.	Experiment and Results.....	129
a.	Production of Deuterium-Depleted Protium.....	129
b.	Production of Protium-Depleted Deuterium	131
c.	Measurement of Liquid Holdup in ISS Columns	131

C.	Fuel Cleanup System for the TSTA	132
D.	Studies on Cryogenic Distillation Columns for Hydrogen Isotope Separation in Japan.....	133
1.	New Cascade as a Possible Alternative to the TSTA Cascade	142
2.	Start-up Analysis for Column Cascade.....	145
3.	Preliminary Experimental Study	149
E.	A New System for Complete Separation of ³ He and T ₂ Composed of a Falling Liquid Film Condenser and a Cryogenic Distillation Column with a Feedback Stream	154
IV.	Permeation Through Porous Membranes	159
V.	New Concepts for the Recovery and Isotope Separation of Tritium in Fusion Reactors.....	163
A.	Tritium Recovery and Concentration Process for LiPb Blanket	163
1.	Options for Detritiation of Light Water	163
2.	Tritium Washing and Upgrading Process (TWUP)	165
3.	CD System.....	167
B.	Tritium Recovery from Helium-Cooled Li-Ceramic Blankets.....	169
1.	Oxidizing Atmosphere	170
2.	Reducing Atmosphere.....	172
C.	Research and Development of Tritium Technology at the Karlsruhe Research Center (Germany).....	173
D.	Recent Results and Developments in Tritium Processing.....	174

Chapter 7

	Laser Isotope Separation of Tritium	181
I.	Basic Principles of the Method: Definitions	181
II.	Multiphoton Dissociation of the Halogenated Methanes.....	185
A.	Multiphoton Dissociation of Trifluoromethane (CTF ₃).....	188
1.	Pulse Number and Wavelength	188
2.	Deconvolution	188
3.	Frequency Dependence	189
4.	Tritium Concentration.....	189
5.	Pressure Effect Versus d and S	190
6.	Effect of Buffer.....	190

7.	Irradiation Geometry	191
8.	Effective Spot Size	193
9.	Repetition Rate	195
10.	Buffer Gas Effect	197
11.	The Effect of CTF_3 and CHF_3 Pressure Without Ar	198
12.	Fluence Dependence of CTF_3 Dissociation: The Effect of Temperature	200
13.	The Effect of CHF_3 Pressure	200
14.	The Effect of Irradiation Wavelength	201
15.	Fluence Dependence of CHF_3 Dissociation	202
16.	MPD Spectrum of CTF_3	203
17.	Multiphoton Dissociation of CTF_3	204
B.	Estimation of a Tritium Recovery System from a Fuel Reprocessing Plant	207
C.	Selective Dissociation of CDF_3 in the Presence of CHF_3 and CTF_3	207
1.	Laser-Based Tritium Separation at Ontario Hydro	210
2.	Chemical Exchange	212
3.	Multiphoton Dissociation and Photoreactor Design	214
4.	Product Separator	215
5.	Cryogenic Distillation	216
6.	Size Estimate	217
7.	Cost Comparisons	217
D.	Multiphoton Dissociation of Trichloromethane (CTCl_3) or Chloroform	218
1.	Frequency Dependence of CTCl_3 Photolysis	222
2.	Pressure and Fluence Dependence of the Dissociation Probability	222
3.	Isotopic Selectivity in Dissociation	225
4.	Dynamics of MPD of CTCl_3	226
III.	Multiphoton Dissociation of Halogenated Ethanes	230
A.	Multiphoton Dissociation of 2-chloro-1,1,1,2- tetrafluoroethane (CF_3CTClF)	230
B.	Multiphoton Dissociation of 2-bromo-1,1,1,2- tetrafluoroethane (CF_3CTBrF)	232
C.	Multiphoton Dissociation of Pentafluoroethane-T (C_2TF_5) in C_2HF_5	236
1.	Dependence of Dissociated Fraction and Specific Activity on Number of Laser Pulses	237

2.	Frequency Dependence of Dissociation Rates for C ₂ TF ₂ and C ₂ HF ₅ and Isotopic Selectivity	237
3.	Effect of Pulse Energy and Pulse Duration on Dissociation Rates	238
4.	Sample Composition and Pressure Effect	239
5.	Effect of Irradiation Geometry	240
6.	Pulse Energy Dependence of Dissociation Yield.....	240
7.	Radical Scavenging with Br	240
D.	Multiphoton Dissociation of Pentafluoroethane-T (C ₂ TF ₅) in C ₂ DF ₅	242
IV.	Multiphoton Dissociation of the Halogenated Propanes	243
A.	Multiphoton Dissociation of Hexafluoropropane-T (CF ₃) ₃ CT	244
1.	MPD Spectra	244
2.	Pressure Effect.....	247
B.	Multiphoton Dissociation of Tritiated Heptafluoropropanes (CF ₃ CF ₂ CTCF ₂ (<i>n</i> -C ₃ TF ₇) and CF ₃ CTFCF ₃ (<i>i</i> -C ₃ TF ₇)).....	249
1.	Laser Frequency Dependence of Dissociation Rate Constants and Isotopic Selectivities	250
2.	Pressure Effect.....	251
3.	Effect of Irradiation Geometry and Temperature	252
	References.....	258
	Appendix	269
	Selected Initials, Acronyms, and Abbreviations.....	271
	Glossary	275
	Alphabetical Listing of Authors.....	291
	Index	293
