

Contents

1. Introduction. By H. Beck and H.-J. Güntherodt	1
1.1 Atomic Structure and Dynamics	2
1.2 Electronic Structure and Transport	3
1.3 Magnetic Properties	3
Reference	3
2. Models for the Structure of Amorphous Metals	
By P.H. Gaskell (With 21 Figures)	5
2.1 Conceptual Models for Amorphous Metals	7
2.1.1 Microcrystallite Models	7
2.1.2 Dense Random-Packed Hard Sphere Models	8
2.1.3 Amorphous or Noncrystallographic Cluster Models	10
a) Noncrystallographic Clusters Based on Tetrahedral Close Packing	10
b) Stereochemically Defined Models Based on Trigonal Prismatic Packing	12
2.1.4 Random and Designed Models: Similarities and Differences	13
a) Characteristics of Dense Random-Packed and Stereo- chemically Defined Models	14
2.2 Experimental Investigations of the Local Structure of Transition Metal-Metalloid Glasses	15
2.2.1 Chemical Short-Range Order Around the Metalloid: M–M Avoidance	16
2.2.2 The Metalloid Coordination Number	17
2.2.3 The Breadth and Shape of the M–T Distribution	19
2.2.4 Macroscopic Physical Properties	20
2.2.5 Summary	21
2.3 Modelling the Structure of T–M Glasses Using Random-Packed and Stereochemically Defined Models	21
2.3.1 Construction of the Initial Model	22
a) Random Monatomic Models	22
b) Diatomic Random Models	23
c) Stereochemically-Defined Models	23
d) Dislocation Models	24
2.3.2 Refinement of the Zero-Order Model	24
a) Energy Minimisation	24

2.3.3	Characterisation of the Topology	27
	a) Analysis of the Interstice Distribution	27
	b) Voronoi Polyhedra	27
	c) Local Structural Parameters	27
2.3.4	Anisotropy	28
2.3.5	Validation of the Model: Calculation of Microscopic and Macroscopic Properties	28
	a) Bond Length Distributions: Termination Broadening	29
	b) Thermal Broadening	30
2.4	Models for Transition Metal-Metalloid Glasses	31
2.4.1	Dense Random-Packed Models for Binary Alloys	31
	a) Correlation Functions	31
	b) Coordination Numbers and Analyses of Interstice Distribution Functions	36
	c) Density	38
2.4.2	Stereochemically-Defined Models	38
	a) Correlation Functions	38
	b) Coordination Numbers, Density and Polyhedron Size Distributions	40
	c) Extension to Other T-M Alloys	42
2.5	Concluding Remarks	44
2.6	Postscript (July 1983)	45
	References	47

3. X-Ray and Neutron Diffraction Experiments on Metallic Glasses

	By J. F. Sadoc and C. N. J. Wagner (With 16 Figures)	51
3.1	Introductory Comments	51
3.2	Diffraction Theory of Amorphous Materials	52
3.2.1	Interference Functions	52
	a) Debye Formula	52
	b) Monatomic Glasses	53
	c) Polyatomic Glasses – Partial Interference Functions	53
	d) Determination of the Partial Functions	55
3.2.2	Radial Distribution Functions and Fourier Transform Techniques	57
	a) Radial Distribution Functions	57
	b) Partial Radial Distribution Functions	58
	c) Total Radial Distribution Functions	59
3.2.3	The Bhatia-Thornton Formalism	60
	a) Number-Concentration Partial Functions	61
	b) Properties of the Number-Concentration Partial Functions	62
	c) Chemical Short-Range Order in Binary Alloys [Generalized Warren Chemical Short-Range Order (CSRO) Parameter]	63

3.3	Experimental Diffraction Methods	65
3.3.1	Variable 2θ X-Ray Method	66
3.3.2	Correction of the Measured X-Ray Intensities	68
	a) Measured Intensity	68
	b) Absorption Correction $A(2\theta, E, E')$ and Polarization Factor $P(2\theta)$	69
	c) Atomic Scattering Factor and Multiple Scattering	70
	d) Normalization of the Scattered Intensity	71
	e) Spurious Effects Occurring in Fourier Transformation Termination Effects	72
3.3.3	Neutron Diffraction	74
	a) Some Characteristic Properties of Neutrons	74
	b) Neutron Interaction with Matter	74
3.3.4	Neutron Scattering Amplitude	75
	a) Nuclear and Magnetic Scattering Amplitudes	75
	b) Polarized Neutron Beams	75
	c) Nonpolarized Neutron Beams	76
	d) Polarization Analysis	76
3.3.5	Correction of the Measured Neutron Intensity	77
	a) Absorption Correction	77
	b) Incoherent Scattering and Background	77
	c) Multiple Scattering	77
	d) Inelastic Scattering and Placzek Correction	77
3.4	Structure of Metallic Glasses	78
3.4.1	Partial Functions of Metal-Metalloid Glasses	78
	a) Combination of X-Ray, Nuclear and Polarized Neutron Diffraction Data for the Evaluation of the Structure of an Amorphous $\text{Co}_{80}\text{-P}_{20}$ Alloy	78
	b) Combination of X-Ray and Neutron Diffraction Data for the Evaluation of the Structure of an Amorphous Fe-B Alloy	80
	c) Combination of Three X-Ray Wavelengths Involving Anomalous Dispersion Corrections of the X-Ray Scatter- ing Factors for the Evaluation of Partial Functions	80
3.4.2	Structure of Metal-Metal Glasses	82
	a) X-Ray and Neutron Structure Investigation of Amorphous Transition Metal Rare-Earth Metal Alloys	82
	b) Isotopic Substitution in an Amorphous $\text{Cu}_{57}\text{Zr}_{43}$ Alloy for the Determination of the Partial Functions from Neutron Diffraction Data	82
	c) Isomorphous Substitution of Zr by Hf in Amorphous $\text{Cu}_{60}\text{Zr}_{40}$ and $\text{Ni}_{35}\text{Zr}_{65}$ Alloys	84
	d) Combination of X-Ray and Neutron Scattering for the Evaluation of Topological and Chemical Short-Range Order in Ni-Ti Glasses	86

e) Chemical Short-Range Order in Metal-Metal Glasses	88
3.4.3 Magnetic Structure Determination Using Neutron Diffraction	88
3.5 Conclusion	90
References	90
4. Mössbauer Spectroscopy Applied to Amorphous Metals	
By U. Gonser and R. Preston (With 21 Figures)	93
4.1 How Mössbauer Spectra are Measured	93
4.1.1 Source	94
4.1.2 Absorber	94
4.1.3 Detector	95
4.1.4 Drive System	95
4.1.5 Mössbauer Spectra	96
4.1.6 Scattering Geometry	97
4.2 Mössbauer Parameters	98
4.2.1 Recoil-Free Fraction	98
4.2.2 Thermal Shift	99
4.2.3 Hyperfine Interactions	99
a) Isomer Shift	99
b) Magnetic Splitting	100
c) Quadrupole Splitting	103
4.3 Mössbauer Effect as a Microprobe	104
4.4 Mössbauer Spectra of Amorphous Metals	104
4.4.1 Effects Due to the Variation of Metalloid Atoms	105
4.4.2 Effects Due to the Variation of Metal Atoms	106
4.4.3 Hyperfine Field Distribution	107
4.4.4 Can the Atomistic Structure be Deduced from the Spectral Structure?	109
4.5 Magnetic Properties	115
4.5.1 External Static Fields	115
4.5.2 External Dynamic Fields	117
4.5.3 Surface Fields (Scattering Method)	118
4.6 Stress	119
4.6.1 Use of Polarized γ -Radiation	119
4.7 Conclusion	122
References	122
5. Defects and Atomic Transport in Metallic Glasses	
By P. Chaudhari, F. Spaepen, and P.J. Steinhardt (With 31 Figures)	127
5.1 Background	127
5.2 Experimental Studies in Atomic Transport Properties	129
5.2.1 General Concepts	129
a) Types of Atomic Transport	129
b) Equilibrium and Isoconfigurational Properties	130

5.2.2 Viscosity 131
 a) Experimental Conditions and Techniques 131
 b) Equilibrium Measurements 132
 c) Isoconfigurational Measurements 132
 d) Stress-Dependence of the Flow Rate. 134
 5.2.3 Diffusion 135
 a) Experimental Techniques 135
 b) Diffusivity of the “Smaller” Atoms 135
 c) Diffusivity of the “Large” Atoms 136
 d) Scaling of Viscosity and Diffusivity 137
 5.2.4 Structural Relaxation 138
 a) Kinetics of the Viscosity Increase 138
 b) Kinetics of the Diffusivity Decrease 139
 c) Relationship Between the Effects of Structural Relaxation
 on Different Properties 139
 5.2.5 Similarity Between the Defects Governing Diffusion
 and Flow 139
 5.3 Computer Simulation Studies of Defects and Atomic Transport . 140
 5.3.1 General Concepts 140
 5.3.2 Computer-Built Models 141
 5.3.3 Point Defects 142
 a) Definition of a Point Defect in Glasses 143
 b) Static Relaxation 144
 c) Dynamic Relaxation 146
 5.3.4 Line Defects – Static Relaxation 151
 a) Definition of Line Defects in Glasses 151
 b) Introducing the Defects in Glasses 152
 c) Detection of Dislocation After Relaxation 153
 d) Burgers Vector 160
 5.3.5 Dynamic Relaxation Studies 163
 5.4 Concluding Remarks 164
 References 166

6. Mechanical Properties of Metallic Glasses

By H.-U. Künzi (With 16 Figures) 169
 6.1 Overview 169
 6.2 Elasticity of Metallic Glasses 170
 6.2.1 Experimental Techniques 171
 6.2.2 Elastic Constants 173
 6.2.3 Theoretical Considerations 176
 6.2.4 Magnetoelastic Behaviour 179
 a) Isotropic Effects 180
 b) Anisotropic Effects 181
 c) The ΔE Effect 183
 d) Experimental Results for the ΔE Effect 186

e) Effect of Annealing on ΔE	187
f) Temperature Dependence of the ΔE Effect	188
6.3 Anelasticity of Metallic Glasses	189
6.3.1 Experimental Techniques	190
6.3.2 Thermoelastic Relaxation	192
6.3.3 Magnetoelastic Relaxation	193
6.3.4 Structural Relaxations	197
a) Experimental Results	201
6.4 Plastic Deformation of Metallic Glasses	212
References	214
7. Vibrational Dynamics of Metallic Glasses Studies by Neutron Inelastic Scattering. By J.-B. Suck and H. Rudin (With 16 Figures)	217
7.1 Background	217
7.2 Recent Computer Simulations and Model Calculations	220
7.3 Experimental Techniques	225
7.4 The Dynamical Structure Factor	229
7.4.1 Dynamical Structure Factors of Binary Glassy Alloys	230
7.4.2 Low Energy Excitations	234
7.4.3 Propagating Short Wavelength Collective Excitations	235
7.5 Gases in Topologically Disordered Alloys	239
7.6 Frequency Distributions	240
7.6.1 Frequency Spectrum of the Metal-Metalloid Glass $\text{Pd}_{80}\text{Si}_{20}$	243
7.6.2 Generalized Frequency Distribution of Binary Glassy Alloys	244
7.6.3 Low Energy Region of the Generalized Frequency Distribution of Binary Glassy Alloys	248
7.6.4 Moments and Thermodynamic Properties Calculated with the Generalized Frequency Distributions of Glassy Alloys	250
7.7 Concluding Remarks	254
References	257
8. Laser Quenching. By M. von Allmen (With 10 Figures)	261
8.1 Experimental Results	262
8.1.1 General Remarks	262
8.1.2 Short Laser Pulses: Alloys	262
a) Au-Si System	263
b) Pd-Si and Pt-Si Systems	266
c) V-Si and Nb-Si Systems	268
d) Other Systems	269
8.1.3 Short Laser Pulses: Pure Elements	270
8.1.4 Continuous Beams in a Scanning Mode	271
8.2 Analysis of the Laser Melting and Quenching Process	272
8.2.1 Kinetic Conditions for Glass Formation	272
8.2.2 Heat Flow	274
8.2.3 A Model of Laser Quenching	276

8.2.4 Discussion	279
8.3 Conclusion	280
References	281
9. Electron Spectroscopy on Metallic Glasses	
By P. Oelhafen (With 36 Figures)	283
9.1 Overview	283
9.2 Experimental Techniques	287
9.2.1 Background	287
9.2.2 Photoelectron Spectroscopy (PES)	289
9.2.3 Auger Electron Spectroscopy (AES)	290
9.2.4 Electron Energy Loss Spectroscopy (EELS)	291
9.3 Glassy Transition Metal Alloys (T-T Alloys)	291
9.3.1 Experimental Results	291
a) Valence Band Spectroscopy	292
b) Core Electron Spectroscopy	297
9.3.2 Discussion	298
9.4 Glassy Alloys Containing Transition Metals and Normal Metals or Metalloids (T-N Alloys)	307
9.4.1 Alloys of 3 <i>d</i> Transition Metals and Metalloids	307
a) Glassy Fe-Alloys	307
b) Glassy Co-Alloys	311
c) Glassy Ni-Alloys	312
9.4.2 Glassy Alloys of 4 <i>d</i> Transition Metals and Metalloids	314
9.4.3 Glassy Pd-Alloys with Si	316
9.5 Other Groups of Metallic Glasses	319
a) Hydrogenated Metallic Glasses	320
9.6 Conclusion	320
