

INTRODUCTION TO PHASE EQUILIBRIA IN CERAMICS

Table of Contents

Introduction	1
Thermodynamics and Phase Equilibria	3
1.1 Systems, Phases, and Components	3
1.2 Equilibrium	4
1.3 The Phase Rule	6
The One-Component System	9
2.1 Le Chatelier's Principle	9
2.2 The Water System	11
2.3 Hypothetical Systems	12
2.4 The Silica System	14
2.5 The Titania and Zirconia Systems	16
2.6 The Carbon System	18
Problems	19
Bibliography and Supplementary Reading	19
The Two-Component System	21
3.1 The Binary Eutectic	25
3.2 Intermediate Compounds	28
3.3 Solid Solution	32
3.4 Liquid Immiscibility	38
3.5 Structural Considerations of Liquid Immiscibility	41
3.6 The System $\text{Al}_2\text{O}_3\text{-SiO}_2$	43
3.7 The System CaO-SiO_2	43
Problems	46
Bibliography and Supplementary Reading	47
Determination of Phase Equilibria Diagrams	49
4.1 Experimental Methods	49
4.2 Thermodynamic Calculations and Estimations	52
Problems	70
Bibliography and Supplementary Reading	70
Hypothetical Binary Systems Phase Analysis	71
5.1 Hypothetical Binary Systems	71
5.2 Phase Analysis Diagrams	72
Problems	75
Bibliography and Supplementary Reading	75
Ternary Systems	77
6.1 Method of Determining Composition	80
6.2 Isoplethal Studies in Ternary Systems	81
6.3 Alkemade Lines	85
6.4 Composition Triangles	86
6.5 Isothermal Sections	87
6.6 System with a Binary Compound Melting Incongruently	88
6.7 Peritectic and Eutectic Reactions during Cooling	93
6.8 Resorption during Cooling	95
6.9 Composition on an Alkemade Line	96
6.10 Phase Transformations	98
6.11 Decomposition of a Binary Compound Having a Phase Field in the Ternary System	99
6.12 Intermediate Ternary Compounds	100
6.13 Complex Cooling Paths	100
6.14 Ternary Solid Solution	103
6.15 Ternary System with Two Solid-Solution Phases	106
6.16 System MgO-“FeO”-SiO_2	107
6.17 Liquid Immiscibility	112
6.18 System $\text{MgO-Al}_2\text{O}_3\text{-SiO}_2$	114

6.19	System $\text{Na}_2\text{O}-\text{CaO}-\text{SiO}_2$	116
	Problems	118
	Bibliography and Supplementary Reading	124
	Nonequilibrium Phases and Reactions	125
7.1	Reactions during Heating	125
7.2	Suppression of an Intermediate Compound	126
7.3	Glass Formation and Transformation Curves	127
7.4	Metastable Immiscibility	130
7.5	Solid Solutions	130
	Bibliography and Supplementary Reading	132
	Quaternary Systems	133
8.1	System Representation	133
8.2	Determination of Phase Relations	137
	Bibliography and Supplementary Reading	138
	Appendices	139
1	Relative Atomic Weights	139
2	Molecular Weights of Oxides	141
3	Melting Points of Metal Oxides	143
4	Nonoxide Ceramic Systems	149
