
CONTENTS

Editors' Preface	ix
Foreword to the English Edition	xi
Foreword to the Russian Edition	xiii
 Chapter 1 Introduction	 1
1-1 Classification of Rheological Models	1
1-2 The Theory of Strength	5
1-3 Ductile Failure	7
1-4 Griffith's Work, <i>The Phenomena of Rupture and Flow in Solids</i>	8
1-5 Some Comments	11
 Chapter 2 The Strength of Ideally Periodic Structures	 15
2-1 Exact Quantum Mechanical Method	15
2-2 Approximate Methods	21
2-3 Some Estimates	28
2-4 Method of Thermal Transformation	30
 Chapter 3 Singular Problems of the Theory of Elasticity	 38
3-1 Classification of Singular Points	38
3-2 Basic Theorems	41
3-3 The Plane Problem of Elasticity Theory	45
3-4 The Cylinder	55

3-5	The Field of Elastic Stresses and Displacements in the Neighborhood of the Tip of an Arbitrary Crack	57
3-6	Closed Cracks and the Influence of Inclusions	62
3-7	Anisotropic Bodies	71
3-8	Piecewise-Homogeneous Bodies	79
3-9	The Influence of the Finiteness of Strains	87
3-10	The Influence of Physical Nonlinearity and the Dimensions of the Initial Cavity	95
3-11	Dynamic Effects	102
Supplement		118
3-12	Plastic Bands near the Tip of a Crack	118
Chapter 4 Basic Conditions of the Mechanics of Brittle Fracture		130
4-1	Criterion for Local Fracture	130
4-2	The Energy Method	139
4-3	Generalized Normal Fracture	144
4-4	Stability of Growth of Brittle Cracks	154
4-5	The Concept of Quasibrittle Fracture; The Structure of the Tip of a Crack	155
4-6	Certain Basic Effects of the Process of Fracture	166
4-7	Methods of Determination of the Fracture Toughness	179
4-8	Estimation of Strength and Fracture Toughness of Certain Materials	191
4-9	Other Criteria of Local Failure	200
4-10	An Application of Fracture Mechanics to Mining	203
Supplement		212
4-11	Slip Lines in Metals and Rocks	212
Chapter 5 Some General Problems of Fracture Mechanics		235
5-1	The Energy Equation	235
5-2	Energy Flux	242
5-3	The Numerical Method	250
5-4	The Elastic Body	252
5-5	The Elastic-Plastic Body	270
5-6	An Elastic-Plastic Analogue of the Griffith Problem	295
5-7	The Viscoelastic Body	304
5-8	The Growth of Cavities with Finite Strain	311
Supplement		317
5-9	Invariant Gamma Integrals	317
5-10	Some Applications of Invariant Gamma Integrals	323

Chapter 6 The Growth of Fatigue Cracks	342
6-1 Introduction	342
6-2 The Growth of Cracks with Monotonic Loading	345
6-3 The Growth of Fatigue Cracks (Theory)	357
6-4 Comparison of the Theory with Experimental Data	367
6-5 Some Specific Problems	379
6-6 An Example of Calculation of the Long-Term Strength Available with Fatigue Failure	386
 Chapter 7 Influence of the Environment on the Growth of Cracks	 398
7-1 Introduction	398
7-2 Influence of Hydrogen and Moisture on Crack Growth in Metals (Experimental Data)	400
7-3 Crack Growth in Metals under the Influence of Hydrogen (Theory)	407
7-4 The Adsorption Effect	420
7-5 The Growth of Corrosion Cracks (Chemical Stress Corrosion)	429
7-6 The Electrochemical Mechanism of Crack Growth	439
7-7 Comparative Analysis of the Basic Mechanisms of Subcritical Crack Growth in Metals	455
7-8 The Influence of Water on the Fracture of Glass and Rock	463
7-9 The Fracture of Burning Solid Fuels	468
 Supplement	 477
7-10 The Growth of Pits (Pitting)	477
7-11 Analysis of Certain Experimental Data on Subcritical Crack Growth in Metals	488
 Chapter 8 Some Problems of Brittle Fracture	 512
8-1 Explosive Fracture	512
8-2 An Underground Explosion in a Spherical Cavity	522
8-3 Self-Sustaining Fracture	536
8-4 The Theory of Flame Drilling	542
8-5 Fracture upon Collision of Brittle Bodies	548
8-6 The Scale Effect	556
8-7 Some Problems of the Erosion of Solids in a Stream of Liquid or Gas	566
8-8 Optical Fracture	573
 Supplement	 579
8-9 The Theory of "Hot" Cracks	579
8-10 Structural Model of the Fracture Front	588

8-11 Certain Problems on the Propagation of a Plane Fracture Wave from a Free Boundary	594
8-12 A Fracture Wave in Gas-Filled Porous Bodies	601
Chapter 9 Fracture Mechanics of Composite Materials	616
9-1 Introduction. Theory of Adhesion	616
9-2 Slip Toughness and Energy of Adhesion	630
9-3 Retarding of Cracks by the Interface between Different Elastic Media	647
9-4 Unidirectional Fiber Composites in Tension	660
9-5 Growth of a Transverse Crack in a Composite (Stochastic Process)	671
9-6 Fracture Toughness and Energy	680
9-7 Compression of Unidirectional Fiber Composites	688
9-8 Fatigue and Corrosion Fracture of Composites	692
9-9 Composites with Dispersed Inclusions	697
9-10 Optimal Design of Some Laminated Materials	717
Chapter 10 Unsteady Crack Dynamics	732
10-1 Functionally Invariant Solutions of the Wave Equation	732
10-2 Basic Equations. Method of Solution	736
10-3 First Basic Problem for a Half Plane	749
10-4 Plane Problems with Slits	753
10-5 Plane Contact Problems	764
10-6 First Basic Problem for an Elastic Half Space	772
10-7 Axisymmetric Problems with Cracks	778
10-8 Axisymmetric Contact Problems	788
Appendix A Stress Intensity Factors	793
A-1 Plane Static Problems	795
A-2 Three-Dimensional Problems	824
A-3 Complex Shear	847
A-4 Dynamic Problems	856
A-5 Other Problems	865
Appendix B Fracture Toughness of the Most Important Structural Materials	887
Appendix C Some Metal-Environment Pairs for Which Brittle Fracture of the Material Is Observed under Tensile Stress	903
References	909
Index	927
