

CONTENTS

Preface	v
List of contributors	viii
ECCG-1 committees and sponsors	xi
Contents	xiv
I. Fundamental studies of crystal growth/growth from the vapour phase	1
1. A.A. Chernov and D.E. Temkin <i>Capture of inclusions in crystal growth</i>	3
2. G.H. Gilmer and K.A. Jackson <i>Computer simulation of crystal growth</i>	79
3. H. Müller-Krumbhaar <i>Developments in the theory of the roughening transition</i>	115
4. M. Krohn and H. Bethge <i>Step structures of real surfaces</i>	141
5. J.A. Venables <i>New experimental approaches to studies of nucleation and growth on surfaces</i>	165
6. J.B. Theeten, L. Hollan and R. Cadoret <i>Growth mechanisms in CVD of GaAs</i>	195
7. R.F.C. Farrow <i>Molecular beam epitaxy</i>	237
8. M. Schieber, I. Beinglass, G. Dishon and A. Holzer <i>Growth of large crystals of HgI₂ from the vapor phase by the temperature-oscillation method</i>	279
9. R. Lacmann and P. Schmidt <i>Nucleation and equilibrium forms of mixed crystals</i>	301

10. V.P. Skripov	
<i>Homogeneous nucleation in melts and amorphous films</i>	327
11. I. Gutzow	
<i>Mechanism of crystallization in undercooled melts and glass-forming systems</i>	379
12. H.R. Oswald and J.R. Günter	
<i>Topotactic preparation of crystalline solids</i>	415
II. Growth and perfection of crystals and layers from the liquid phase	435
1. B.K. Vainshtein	
<i>Structure and growth of protein crystals</i>	437
2. J. Garside	
<i>Kinetics of crystallization from solution</i>	483
3. A. Authier	
<i>X-ray and neutron topography of solution-grown crystals</i>	515
4. D.T.J. Hurle	
<i>Hydrodynamics in crystal growth</i>	549
5. J.C. Brice	
<i>Trends in liquid phase epitaxy</i>	571
6. D. Elwell	
<i>Electrolytic growth from high-temperature solutions</i>	605
7. W. Tolksdorf	
<i>New experimental developments in flux growth</i>	639
8. A.J.R. de Kock	
<i>Effect of growth conditions on semiconductor crystal quality</i>	661
9. B. Cockayne	
<i>Developments in the melt-growth of laser materials</i>	705
III. Recent progress in materials research and applications	725
1. J.J. Gilman	
<i>Metallic glasses—A new technology</i>	727
2. A.J. Berlinsky	
<i>Organic crystals with metallic conductivity</i>	743
3. H.U. Beyeler and P. Brüesch	
<i>Superionic conductors</i>	765

4. J.J. Brissot	
<i>Recent achievements in low-cost silicon solar cells</i>	795
5. C.H.L. Goodman	
<i>Control of structure in semiconductor devices</i>	823
6. R.L. Parker	
<i>Results of crystal growth in Skylab (and ASTP)</i>	851
7. R.A. Laudise	
<i>Trends in materials science</i>	887
Subject Index	907
Materials Index	913
