

CONTENTS

<i>Foreword</i>	xi
<i>Preface</i>	xii
<i>List of contributors</i>	xiv

1	Crystal growth: an introductory survey <i>P.M. Dryburgh</i>	1
1.1	The importance of single crystals	1
1.2	Reasons for growing single crystals	5
1.2.1	The significance of grain boundaries	5
1.2.2	The tensor properties of crystals	6
1.3	The historical development of crystal growth	9
1.4	Techniques used to grow crystals	13
1.5	Theoretical aspects of crystal growth	15
1.6	Some broader aspects of crystal growth	16
1.7	Conclusions	18
	References	18

PART I THE GROWTH OF CRYSTALS FROM MELTS

2	Modelling of solidification problems <i>A.B. Crowley</i>	25
2.1	Introduction	25
2.2	The classical Stefan problem	26
2.2.1	Description of the problem	26
2.2.2	Finite difference methods	28
2.2.3	Reformulations	31
2.3	Applications	34
2.3.1	Czochralski growth	34
2.3.2	Solidification of binary alloys	35
2.3.3	Mushy regions and supercooling	38
	References	40

3	Interactions between convection, segregation, and interface morphology <i>R.A. Brown</i>	41
3.1	Introduction	41
3.2	Fields, forces and flows	45
3.2.1	Governing equations	45
3.2.2	Scaling analysis	52
3.2.3	Numerical analysis	59
3.3	Analysis of flow transitions in crystal growth from the melt	62

iv Contents

3.4	Relationship between convection, solute segregation and interface morphology	68
3.4.1	Solute segregation	68
3.4.2	Interface morphology	71
3.5	Status of modelling for prototype crystal growth systems	73
3.5.1	Czochralski growth	73
3.5.2	Vertical Bridgman growth	75
3.5.3	Floating-zone growth	86
3.6	Prospects for the future	88
	Acknowledgements	90
	References	90

4 The dynamics and control of Czochralski growth *D.T.J. Hurle* 97

4.1	Introduction	97
4.2	The meniscus	98
4.2.1	The three-phase boundary	98
4.2.2	Meniscus shape	99
4.2.3	Dynamic stability	100
4.3	Heat transport in the crystal	101
4.4	Heat transport in the melt	103
4.4.1	Introduction	103
4.4.2	Flow adjacent to a rotating crystal	104
4.5	Solute segregation	107
4.6	Process control parameters	109
4.6.1	Introduction	109
4.6.2	Relationship between apparent weight and crystal radius	110
4.6.3	Meniscus dynamics	111
4.6.4	Power input	113
4.7	Transfer function of the pulling process	114
4.8	Automatic diameter control	118
4.9	Concluding remarks	121
	References	122

5 Current melt-growth processes for semiconductors *G. Müller* 125

5.1	Introduction	125
5.2	Growth of silicon crystals by the Czochralski technique	128
5.2.1	General arrangements for crystal pulling	128
5.2.2	Growth of dislocation-free crystals	129
5.2.3	Control of oxygen content	131
5.2.4	Future developments	133
5.3	Growth of silicon crystals by the floating-zone technique	135
5.3.1	Introduction and principle	135
5.3.2	Growth procedure	135
5.3.3	Properties of float-zoned crystals	138
5.4	Growth of crystals of III-V compounds by the Czochralski technique	139
5.4.1	Introduction	139
5.4.2	The LEC growth technique	141

5.5	Growth and synthesis of gallium arsenide by the horizontal Bridgman technique	145
5.5.1	Principle and growth procedure	145
5.5.2	Crystal properties	146
5.6	Conclusions	147
	References	147

6 Melt-growth of oxides *D. Mateika* 149

6.1	Introduction	149
6.2	The Czochralski process	149
6.2.1	Crystal-pulling apparatus	149
6.2.2	Growth assembly	152
6.2.3	Crystal growth	153
6.2.4	Crystal characterization	155
6.3	The double container (DC) technique	157
6.3.1	Growth assembly	157
6.3.2	Melting and growth processes	159
6.3.3	Crystal characterization	160
6.4	The floating-zone method	163
6.4.1	Growth apparatus	163
6.4.2	Melting and growth processes	164
6.4.3	Crystal characterization	166
6.5	The heat-exchanger method (HEM)	169
6.5.1	HEM furnace	169
6.5.2	Melting and growth processes	170
6.5.3	Crystal characterization	171
6.6	Conclusions	171
6.6.1	Czochralski technique	171
6.6.2	Double container technique	174
6.6.3	Floating-zone method	174
6.6.4	Heat exchanger method	174
	Acknowledgements	175
	References	175

PART II THE GROWTH OF ORGANIC CRYSTALS

7 The growing of organic crystals *B.J. McArdle and J.N. Sherwood* 179

7.1	Introduction	179
7.2	Purity and purification	180
7.2.1	Pre-purification	180
7.2.2	Ultra-purification	181
7.2.3	Directional freezing and zone-refining	183
7.2.4	Definition of purity	184
7.3	Assessment of crystal quality	185
7.3.1	Etching techniques	186
7.3.2	X-ray topography	189
7.4	Melt growth	191

7.4.1	Bridgman technique	191
7.4.2	Czochralski technique	197
7.4.3	Undercooled melt technique	198
– 7.5	Vapour growth	201
7.5.1	The Sloan technique	201
7.5.2	Vapour transport technique	203
7.5.3	Crystal perfection of vapour-grown crystals	204
7.6	Growth from solution	206
7.6.1	Seed preparation and selection	208
7.6.2	Temperature lowering rate	208
7.6.3	Agitation	211
7.6.4	Crystal perfection	211
7.7	Summary	214
	Acknowledgements	214
	References	215

PART III THE GROWTH OF CRYSTALS FROM SOLUTIONS

8 Liquid-phase epitaxy *P.D. Greene* 221

8.1	Introduction	221
8.2	The basis of LPE	224
8.3	Substrate effects	229
8.4	Growth on shaped substrates	232
8.5	Thin layers and superlattices	237
8.6	Uses and limitations of LPE	240
	References	242

9 Oxide crystal growth from molten solutions *E.A. Giess* 245

9.1	Introduction	245
9.2	Molten solution techniques	246
9.3	Solvent system selection	249
9.4	Solubility	251
9.5	Nucleation	257
9.6	Growth model	259
	Acknowledgements	263
	References	264

10 Hydrothermal crystal growth – some recent results *R.A. Laudise* 267

10.1	Introduction	267
10.2	Hydrothermal physical chemistry	268
10.3	Hydrothermal equipment	277
10.4	Crystal growth	280
	Acknowledgements	283
	References	284

PART IV THE GROWTH OF CRYSTALS FROM VAPOUR

11	Thermodynamic aspects of vapour-phase epitaxy <i>G.B. Stringfellow</i>	289
11.1	Introduction	289
11.2	Thermodynamic treatment of VPE	290
11.2.1	Driving force for epitaxy	291
11.2.2	VPE phase diagrams	294
11.2.3	Solution thermodynamics	295
11.2.4	Effect of V/III ratio	300
11.2.5	Solid-phase immiscibility	302
11.3	Summary	305
	Acknowledgements	306
	References	307
12	The physics of CVD processes <i>L.J. Giling and J. van de Ven</i>	309
12.1	Introduction	309
12.2	Convective transport	310
12.2.1	Criterion for laminar or turbulent flow	312
12.2.2	Criterion for natural convection	313
12.2.3	The development of flows	318
12.2.4	Return flow and memory effects	320
12.2.5	The effect of pressure on flow	322
12.3	Transport by diffusion	323
12.3.1	Analytical solution of the diffusion problem	324
12.4	Discussion	330
12.4.1	The influence of gas-flow pattern on growth behaviour	330
12.4.2	Uniform growth rates in the lateral direction	333
12.4.3	Uniform growth rates in the flow direction	333
12.5	Conclusion	336
	References	336
13	Molecular beam epitaxy – growth kinetics, dynamics and doping <i>B.A. Joyce</i>	337
13.1	Introduction	337
13.2	The MBE process	337
13.3	Surface structure, crystallographic and electronic	341
13.3.1	Crystallography and composition	341
13.3.2	Surface electronic structure	344
13.4	Physico-chemical aspects of growth by MBE	349
13.4.1	Thermodynamic considerations	349
13.4.2	Reaction kinetics	350
13.4.3	Kinetics of alloy film growth	359
13.5	Growth dynamics	362
13.5.1	Basic effects and first-order models	362
13.5.2	Diffraction as a multiple-scattering (dynamical) process	364

13.5.3	Applications based on periodicity	369
13.6	Dopant incorporation in MBE-grown films	375
13.6.1	Incorporation of Be in GaAs	375
13.6.2	Si doping of GaAs	375
13.6.3	Sn doping of GaAs	376
13.6.4	Modulation doping	380
13.7	Other materials	381
13.8	Conclusions and future directions	381
	Acknowledgements	382
	References	382
14	Atmospheric pressure MOCVD for the growth of binary semiconductors <i>J.O. Williams</i>	387
14.1	Introduction	387
14.2	Reaction chemistry	388
14.3	Crystal growth	389
14.3.1	Gallium arsenide	389
14.3.2	Indium phosphide	393
14.3.3	Zinc selenide	394
14.4	<i>In situ</i> characterization	398
14.4.1	Experimental techniques	398
14.4.2	Kinetic considerations	400
14.4.3	Dimethylzinc mass spectrum	401
14.4.4	Effect of reactor conditions on DMZ concentration	402
14.5	Comparison of the structural qualities of ZnSe/GaAs prepared by MOVPE and MBE	407
14.6	Conclusions	407
	Acknowledgements	407
	References	410
15	Fundamentals of plasma-induced and plasma-assisted CVD <i>S. Vepřek</i>	413
15.1	Introduction	413
15.2	The nature and types of gas-discharge plasmas	415
15.3	Techniques and apparatus	417
15.3.1	The parallel-plate reactor	417
15.3.2	The DC glow-discharge	419
15.3.3	Inductively coupled discharge	421
15.3.4	Activated reactive evaporation	421
15.3.5	Ion beam deposition	422
15.4	The effect of plasma on a heterogeneous system	423
15.4.1	Physical sputtering	423
15.4.2	Implantation and diffusion	424
15.4.3	Diffusion	424
15.4.4	Plasma-assisted, physical vapour deposition and related techniques	425
15.4.5	Plasma-induced and plasma-assisted chemical vapour deposition	425
15.5	Conclusions	429

Acknowledgements	430
References	430

PART V THE CHARACTERIZATION OF CRYSTALS

16	Structural characterization of single crystals of electronic materials	<i>G.T. Brown</i>	435
16.1	Introduction		435
16.2	Characterization techniques		437
16.2.1	Core techniques		437
16.3	Structural defects		452
16.3.1	Polycrystallinity		452
16.3.2	Precipitates and inclusions		454
16.3.3	Planar defects		457
16.3.4	Dislocations		459
16.3.5	Point defects		461
16.3.6	Continuous inhomogeneities		461
16.4	Conclusions		462
	Acknowledgements		465
	References		465
17	The characterization of surfaces	<i>N.V. Richardson</i>	467
17.1	Introduction		467
17.2	General considerations		468
17.3	SEXAFS study of chlorine absorption on silver		471
17.4	Ion scattering spectroscopy (ISS) of copper growth on tungsten		475
17.5	Structural phase transition of pyridine on platinum		478
17.6	Depth profiling by SIMS		480
17.7	Conclusions		482
	Acknowledgements		482
	References		482
18	New material characterization requirements for III–V technology	<i>G.M. Martin, J.M. Patillon and C. Schiller</i>	485
18.1	Introduction		485
18.2	Homogeneous semi-insulating gallium arsenide substrates for LSI circuits		485
18.2.1	Materials requirements for LSI circuits		485
18.2.2	Techniques for assessing the variations of relevant properties of as-grown substrates		488
18.3	Multilayer heterostructures		498
18.3.1	Non-destructive, chemical analysis		499
18.3.2	Optical quality of interfaces		505
18.3.3	Electrical quality of interfaces		507

References	509

PART VI CASE HISTORIES

19	Single crystal silicon: a case history	<i>K.G. Barraclough</i>	513
19.1	Introduction		513
19.2	The natural ability of silicon and its oxide		514
19.3	Pre-planar key inventions in silicon materials		518
19.3.1	Purification		518
19.3.2	Dislocation-free single crystals		522
19.4	Post-planar developments		524
19.4.1	Device scaling		524
19.4.2	Polysilicon		527
19.4.3	CZ silicon		528
19.4.4	FZ silicon		531
19.4.5	Wafering technology		536
19.4.6	Epitaxy		537
19.5	Silicon material and device interactions		538
19.5.1	General remarks		538
19.5.2	High energy detectors and high power devices		539
19.5.3	Low power devices and ICs		540
19.6	Conclusions		550
	Acknowledgements		551
	References		551

20	Indium phosphide crystal growth: a case history	<i>B. Cockayne</i>	555
20.1	Introduction		555
20.2	Basic properties and devices		556
20.3	Device structures		558
20.4	Crystal growth		560
20.4.1	Bulk growth		560
20.4.2	Epitaxial growth		565
20.5	Crystal assessment		575
20.6	The present status of InP		576
	References		580
