

Table of contents

Preface	ix
List of symbols	xi
1 The physical background of time- and temperature-dependent crack growth	1
1.1 The Griffith theory	2
1.2 Review of the physical processes	6
1.3 Rate theory	14
1.4 Comments and summary	19
2 Deterministic fracture kinetics theory and constitutive laws	23
<i>Part 1. Deterministic fracture kinetics theory</i>	23
2.1 The energy-barrier model of fracture kinetics	23
2.2 The principles of the kinetics analysis	31
2.3 Comments and summary	43
<i>Part 2. Deterministic constitutive laws</i>	45
2.4 Environment-assisted cracking	47
2.5 Creep crack growth	62
2.6 Corrosion fatigue	68
2.7 The revised Griffith theory	76
2.8 Internal stress field and microstructural effects	81
2.9 Lifetime analysis	85
2.10 Comments and summary	92
3 Probabilistic fracture kinetics theory and constitutive laws	95
<i>Part 1. Probabilistic fracture kinetics theory</i>	95
3.1 The theory of probabilistic fracture kinetics	96
3.2 Comments and summary	107

vii

<i>Part 2. Probabilistic constitutive laws</i>	108
3.3 Applications of probabilistic kinetics	108
3.4 The random walk concept of crack growth	119
3.5 Stress corrosion cracking	125
3.6 Corrosion fatigue	129
3.7 Composite materials	130
3.8 Comments and summary	135
References	137
Appendices	147
A. Review of fracture mechanics	149
B. Review of rate theory	156
C. The kinetics of crack growth controlled by consecutive energy barriers	164
D. Supplement to Section 3.5	168
Author index	173
Subject index	177
