Chapter 1. Effects of Alloying on Fracture Characteristics

Norman S. Stoloff

I. Introduction	2
II. Theory of the Ductile-to-Brittle Transition	4
III. Solutes and Plastic Properties Related to Fracture	15
IV. Fracture of Solid Solution Alloys	35
V. Fracture of Ordered Alloys	53
VI. Fracture of Precipitation-Hardened or Dispersion-Strengthened Alloys	61
VII. Grain-Size Effects	68
VIII. Alloying Elements and Fracture Toughness	70
IX. Recommended Research	71
X. Summary	72
Appendix A. Derivation of Fracture Stress-Surface Energy Relation	74
Appendix B. Derivation of k_y	75
Symbols	76
References	77

Chapter 2. Metal Processing and Fracture

A. T. English and W. A. Backofen

I. Introduction	84
II. Processing for Structural Refinement	87
III. Processing-Induced Fracturing Anisotropy	104
IV. Processing for Control of Intragranular Structure	117
V. Recommended Research	129
VI. Summary	130
Appendix. Grain-Size Measurement	131
References	133

Chapter 3. **Fracture of High-Strength Materials**

A. S. Tetelman and A. J. McEvily, Jr.

I.	Introduction	137
II.	The Effect of Plate Thickness on Fracture Toughness	146
III.	Physical Basis for Fracture-Safe Design with High-Strength Materials	150
IV.	Microscopic Aspects of Fracture in High-Strength Materials	156
V.	Fatigue	169
VI.	Environmental Effects	174
VII.	Recommended Research	177
VIII.	Summary	177
	Symbols	178
	References	179

Chapter 4. **Fracture Toughness Comparisons in Steels**

Francis W. Boulger

I.	Introduction	182
II.	Fracture Toughness Tests for Constructional Steels	187
III.	Toughness Tests Based on Fracture Mechanics	197
IV.	Correlations among Fracture-Toughness Tests	202
V.	Correlation of Laboratory and Service Data	206
VI.	Effects of Composition on Fracture Toughness	213
VII.	Effects of Mill Processing	221
VIII.	Effects of Heat Treatment	225
IX.	Effects of Other Variables	231
X.	High-Strength Steels	233
XI.	Recommended Research	240
XII.	Summary	241
	Symbols	243
	References	244

Chapter 5. **Strength and Toughness of Hot-Rolled Ferrite-Pearlite Steels**

J. H. Bucher, J. D. Grozier, and J. F. Enrietto

I.	Introduction	248
II.	Concepts and Terminology	248
III.	Microstructural Factors Determining Strength and Toughness	257
IV.	Application of Techniques of Analysis to Production Conditions	278
V.	Recommended Research	289
VI.	Summary	291
	Appendix	291
	Symbols	295
	References	296

Chapter 6. Fracture Behavior of Aluminum Alloys*R. E. Zinkham and J. H. Dedrick*

I. Introduction	300
II. Test Methods	312
III. Engineering Methods for the Design of Aluminum against Fracture	335
IV. Micromechanistic Observations of Fracture	346
V. Metallurgical Considerations	350
VI. Recommended Research	366
VII. Summary	366
Symbols	367
References	368

Chapter 7. Fracture in the Refractory Metals*J. H. Bechtold and B. J. Shaw*

I. Introduction	371
II. Fracture at Low Temperatures from the Macroscopic Viewpoint	375
III. Atomistic Considerations of Fracture at Low Temperatures	388
IV. High-Temperature Fracture	394
V. Recommended Research	395
VI. Summary	396
Symbols	396
References	396

Chapter 8. Effects of Lasers on Fracture of Materials*R. D. Engquist*

I. Introduction	399
II. Discussion	400
III. Recommended Research	422
IV. Summary	423
Symbols	423
References	424

Chapter 9. Electrically Induced Fracture of Materials*F. W. Davisson and W. H. Vaughan*

I. Introduction	425
II. Fracture Induced by Spark Discharges	426
III. Fracture Induced by Arc Discharges	451
IV. Fracture Associated with Electrical Fields	460
V. Fracture in Piezoelectric Materials	471

VI. Recommended Research	472
VII. Summary	473
Symbols	473
References	474
AUTHOR INDEX	479
SUBJECT INDEX	489
