Chapter 1. Fracture of Glass

C. J. Phillips

I. Introduction	2
II. General Fracture Behavior	3
III. Glass Structure	4
IV. Maximum Tension as Failure Criterion	5
V. Methods of Estimating Ultimate Strength	5
VI. Stress Concentration	9
VII. The Griffith Theory	11
VIII. Measuring Breaking Stresses	13
IX. Fracture Surfaces	15
X. Importance of Surface Condition	16
XI. Statistical Failure Theories	16
XII. Static Fatigue	20
XIII. Effect of Elevated Temperature	24
XIV. Current Status of the Microcrack	24
XV. Four Ranges of Glass Strength	27
XVI. Other Fracture Criteria	28
XVII. Recommended Research	30
XVIII. Summary	31
Symbols	33
References	33

Chapter 2. Fracture of Polymeric Glasses

J. P. Berry

I. Introduction	38
II. Characteristics of Polymeric Materials	39
III. Modes of Failure of Polymers	43
IV. Theories of Fracture	45
V. Fracture of Amorphous Polymers	48
VI. Time-Dependent Fracture	75
VII. Conclusions and Recommended Research	84
VIII. Summary	86
Symbols	89
References	89

Chapter 3. Brittle Fracture of Rock*Leonard Obert*

I. Introduction	94
II. Nature and Scope of Treatment	97
III. Determination of Limiting States of Stress	102
IV. Theories of Fracture	123
V. Effect of Planes of Weakness	137
VI. Evidence for the Existence and Extension of Cracks in Rock	139
VII. Crack Extension	143
VIII. Coefficient of Friction for Rock and Minerals	148
IX. Recommended Research	149
X. Summary	149
Symbols	153
References	154

Chapter 4. Microscopic Aspects of Fracture in Ceramics*R. J. Stokes*

I. Introduction	158
II. Theoretical Strength of Ceramic Materials	160
III. Crack Initiation in Ceramic Single Crystals	165
IV. Crack Growth in Ceramic Single Crystals	195
V. Crack Propagation in Ceramic Single Crystals	203
VI. Fracture of Polycrystalline Ceramics at Low Temperatures	216
VII. Fracture of Polycrystalline Ceramics at High Temperatures	226
VIII. Summary	235
Symbols	237
References	238

Chapter 5. Fracture in Polycrystalline Ceramics*R. L. Coble and N. M. Parikh*

I. Introduction	245
II. Plastic and Brittle Behavior of Ceramic Oxides	247
III. Fracture in Polycrystalline Alumina	269
IV. Factors Affecting Strength of Ceramics	289
V. Recommended Research	307
VI. Summary	309
Symbols	310
References	311

Chapter 6. Fracture of Elastomers*A. N. Gent*

I. Introduction	316
II. Internal Viscosity of Elastomers	317
III. Tensile Strength	319
IV. Tear Strength	322
V. Effect of Fillers	327
VI. Cut Growth Due to Repeated Stressing	333
VII. Fatigue Cracking	335
VIII. Abrasive Wear	338
IX. Resistance to Ozone Cracking	343
X. Elastic Instabilities	345
XI. Summary and Recommended Research	346
Symbols	348
References	349

Chapter 7. Molecular Mechanical Aspects of the Isothermal Rupture of Elastomers*F. R. Eirich and Thor L. Smith*

I. Introduction	352
II. The Rubber State	355
III. Phenomenological Aspects of Rupture	496
IV. Discussion	560
V. Factors in Application	569
VI. Recommended Research	589
VII. Summary	592
Symbols	595
References	600

Chapter 8. Mechanics of Failure of Fibrous Composites*B. Walter Rosen and Norris F. Dow*

I. Introduction	612
II. Tensile Strength	626
III. Shear Failure	645
IV. Compressive Strength	651
V. Combined Loads	657
VI. Experimental Evaluations	661
VII. Recommended Research	670
VIII. Summary and Concluding Discussion	671
Symbols	671
References	672

Chapter 9. Fracture Mechanics of Composites*H. T. Corten*

I. Introduction	676
II. Concepts of Fracture Mechanics	679
III. Experimental Investigations of Crack Extension and Fracture Behavior of Composites	727
IV. Recommended Research	762
V. Summary	765
Symbols	765
References	767

Chapter 10. Mechanics of Bone Fracture*George Herrmann and Harold Liebowitz*

I. Introduction	772
II. Constitution and Structure of Bone	772
III. Mechanical Properties of Bone	775
IV. Mechanical Properties of Bones	805
V. Fracture of Bone and Bones	808
VI. Mechanical Aspects of Healing of Fractures	815
VII. Mechanical Models of Bone Material	828
VIII. Recommended Research	835
IX. Summary	836
References	836

Chapter 11. Microstructural Aspects of the Fracture of Two-Phase Alloys*J. Gurland and N. M. Parikh*

I. Introduction	842
II. On the Role of Brittle Particles in Ductile Fracture	842
III. Flow and Fracture in Alloys with High Concentrations of a Hard Phase	855
IV. Recommended Research	874
V. Summary	876
Symbols	877
References	878

Chapter 12. Fracture of Lake and Sea Ice*W. F. Weeks and A. Assur*

I. Introduction	880
II. Structure of Ice and Ice Sheets	881
III. Chemistry and Phase Relations	894

CONTENTS

xxi

IV. Dislocations, Cracks, and Stress Concentrators	897
V. Theoretical Considerations	909
VI. Experimental Results	918
VII. Recommended Research	965
VIII. Summary	968
Symbols	970
References	972
