1. HISTORICAL INTRODUCTION	1
1.1 First Observations of Structural Superplasticity	1
1.2 Early Observations of Environmental Superplasticity	4
1.3 The Revival of Interest in Structural Superplasticity	5
2. THE MECHANICS OF SUPERPLASTIC DEFORMATION AND THE ASSESSMENT OF SUPERPLASTIC BEHAVIOUR	8
2.1 The Tensile Test	8
2.2 Constitutive Relations for Superplastic Materials	9
2.3 The Deformation Behaviour of Superplastic Materials	12
2.3.1 The tensile stress-strain curve	12
2.3.2 Tensile stress-strain rate variations	15
2.3.3 Compressive behaviour	16
2.3.4 Torsion testing	16
2.4 The Shape of the Deforming Specimen	17
2.5 Plastic Instability	19
2.5.1 The onset of necking	19
2.5.2 The geometry of neck formation	23
2.6 The Elongations of Rate-Sensitive Materials	25
2.7 The Strain-rate Sensitivity Index, $m$	29
2.7.1 Determination of $m$ from the $\sigma_t - \dot{\epsilon}_t$ curve	29
2.7.2 Determination of $m$ using change in strain-rate method	30
2.7.3 Determination of $m$ from stress-relaxation tests	34
2.7.4 Comparison of $m$ values determined using different techniques	35
2.7.5 The physical significance of $m$ value measurements	37
2.8 Strain-rate Sensitivity in Environmentally Superplastic Materials	38
2.9 Other Test Procedures for Studying Structural Superplasticity	40
	XI

2.9.1	Indentation tests	40
2.9.2	Measurement of internal stresses	41
2.9.3	Measurement of grain boundary shear	41
2.9.4	Damping characteristics	41
2.9.5	Miscellaneous tests	42
3.	STRUCTURAL SUPERPLASTICITY - EXPERIMENTAL	43
3.1	The Mechanical Properties	50
3.1.1	Characteristics of deformation	50
3.1.2	Necessary conditions	58
3.1.3	Variables of deformation	65
	(a) Strain-rate	66
	(b) Strain	67
	(c) Strain-rate sensitivity index	67
	(d) Temperature	71
3.1.4	The influence of prior treatments and compositional variations	74
3.1.5	Elongation	78
3.1.6	Macroscopic characteristics : an assessment	82
3.2	Microstructural Studies	83
3.2.1	Qualitative metallography	84
	(a) Surface studies	84
	(b) Internal structure	88
	(c) Marker experiments	95
	(d) Dynamic experiments	99
3.2.2	Quantitative metallography	105
	(a) Grain boundary sliding	105
	(b) Measurements of grain size and shape	108
	(c) Analysis of texture	111
3.2.3	Assessment of metallographic and topological features	117
3.3	Fracture	120

3.3.1	Macroscopic aspects	121
3.3.2	Microscopic aspects	123
3.3.3	Origin of cavitation	127
	(a) Phenomenological	127
	(b) Microstructural	128
4.	STRUCTURAL SUPERPLASTICITY - THEORETICAL	133
4.1	Early Theories	135
4.2	Modern Theories	137
	4.2.1 Rheological theories	137
	4.2.2 Activation energy for superplastic flow	144
	4.2.3 Atomistic theories	152
	(a) Diffusional flow mechanisms	154
	(b) Dislocation creep theories	165
	(c) Grain boundary deformation models	174
	(d) Multi-mechanisms	196
5.	ENVIRONMENTAL SUPERPLASTICITY	201
5.1	Experimental Results	201
	5.1.1 Macroscopic characteristics	201
	(a) Transformational plasticity	201
	(b) Temperature cycling	210
	(c) Neutron irradiation	211
	5.1.2 Metallographic features	212
5.2	Theoretical Studies	215
	5.2.1 Phenomenological approaches	215
	5.2.2 Mechanistic models	220
	5.2.3 Cavitation	224
6.	APPLICATIONS OF SUPERPLASTICITY	226
6.1	Forming Operations	227
	6.1.1 Hydraulic bulging	228

6.1.2	Sheet thermoforming	231
6.1.3	Blow moulding	237
6.1.4	Deep drawing	239
6.1.5	Punch stretching	242
6.1.6.	Forging and stamping	242
6.1.7	Extrusion	246
6.1.8	Dieless drawing	247
6.1.9	Powder metallurgy processes	248
6.2	Theoretical Analyses of Superplastic Forming Processes	249
6.2.1	Analysis of hydraulic bulging	250
6.2.2	Analysis of bulging into a 90° V-groove	255
6.2.3	Analysis of extrusion	256
6.2.4	Regression analyses	256
6.3.	Practical Developments	256
6.3.1	Alloys	258
6.3.2	Design considerations	265
6.3.3	Tooling	266
