| Preface ..... | 7 |
|---------------|---|

## Part I

### THEORETICAL AND EXPERIMENTAL PRINCIPLES

#### Chapter I. PRINCIPLES AND DEFINITIONS OF THERMODYNAMICS AND ELECTROCHEMICAL KINETICS

|   |    |
|---|----|
| 1. Electrodes and the voltage of the electrochemical cell ..... | 21 |
| 2. Galvani and Volta voltage .....                              | 22 |
| 3. Equilibrium potentials and exchange currents .....           | 23 |
| 4. Overpotential and polarization .....                         | 23 |
| 5. Nernst Equation .....  | 24 |
| 6. Electrical double layer .....                                | 24 |
| 7. Overpotential .....  | 26 |
| 8. The elementary act of the electrochemical reactions.....     | 30 |
| References .....  | 34 |

#### Chapter II. MECHANISM OF CRYSTALLIZATION

|   |    |
|---|----|
| <b>I. Introduction</b> .....                              | 36 |
| 1. Supersaturated fluids and supercooled melts .....      | 37 |
| <b>II. Principle of growth by successive layers</b> ..... | 44 |
| <b>III. Gibbs-Wulff theorem of equilibrium form</b> ..... | 44 |
| <b>IV. Stefan problem</b> .....                           | 45 |
| A. Introduction .....                                     | 45 |
| B. Quantitative treatment of Stefan problem .....         | 46 |
| C. Stefan problem in particular cases .....               | 48 |
| 1. Plane crystal .....                                    | 49 |
| 2. Spherical crystal .....                                | 53 |
| 3. Cylindrical crystal .....                              | 56 |
| 4. Ellipsoidal crystal .....                              | 57 |

|  |    |
|--|----|
| D. Influence of impurities .....                           | 58 |
| V. Energetics and kinetics of nucleation .....             | 59 |
| 1. Energetics of nucleation .....                          | 59 |
| 2. Kinetics of nucleation .....                            | 62 |
| 3. Heterogeneous nucleation .....                          | 64 |
| 4. Single atoms, single molecules and lattice images ..... | 69 |
| VI. Defects in crystals .....                              | 70 |
| 1. Point defects .....                                     | 71 |
| 2. Linear defects .....                                    | 73 |
| 3. Surface defects .....                                   | 74 |
| 4. Volume defects .....                                    | 74 |
| VII. Diffusion-controlled growth .....                     | 74 |
| VIII. Nucleation-controlled growth .....                   | 75 |
| IX. Dislocation-controlled growth .....                    | 80 |
| X. Appendix .....  | 83 |
| References .....   | 85 |

### Chapter III. ELECTROCRYSTALLIZATION

|   |     |
|---|-----|
| A. Crystallization associated with a chemical reaction .....              | 87  |
| B. Electrocrystallization .....   | 88  |
| C. Crystallization overpotential .....                                    | 90  |
| 1. Definition .....   | 90  |
| 2. Crystallization overpotential as part of total overpotential .....     | 90  |
| 3. Crystallization impedance as part of Faraday impedance .....           | 93  |
| 4. Crystallization impedance .....  | 94  |
| 5. Superposition of crystallization impedance on other impedances .....   | 96  |
| 6. Identification of crystallization overpotential .....                  | 102 |
| 7. The formation of nuclei as the rate-determining step .....             | 107 |
| 8. Deposition on real crystal surfaces .....                              | 109 |
| D. Experimental results on crystallization overpotential .....            | 109 |
| 1. Potentials determined on static conditions .....                       | 109 |
| 2. Determination of overpotential of nucleus formation .....              | 111 |
| 3. Electrocrystallization on the surface of real crystals .....           | 117 |
| E. Compact polycrystalline deposits obtained by electrocrystallization    | 122 |
| 1. Isolated field-oriented crystals, FI .....                             | 123 |
| 2. FI to BR transition forms .....  | 123 |
| 3. Crystals which reproduce the substrate, BR .....                       | 123 |
| 4. Polycrystalline deposition by formation of two-dimensional nuclei ..   | 124 |
| 5. Transition forms, Z .....  | 131 |
| 6. Polycrystalline deposition by formation of three-dimensional nuclei .. | 131 |
| References .....  | 134 |

## Chapter IV. CRYSTALLIZATION AND ELECTROCRYSTALLIZATION OF WHISKERS

|  |     |
|--|-----|
| 1. Phenomenological description .....                          | 137 |
| 2. The mechanism of whisker growth .....                       | 143 |
| 3. Stefan problem in case of whisker growth .....              | 149 |
| 4. Vapour-liquid-solid (VLS) mechanism of whisker growth ..... | 155 |
| 5. Electron microscope and diffraction studies .....           | 159 |
| 6. Electrocrystallization of whiskers .....                    | 160 |
| References .....   | 169 |

## Chapter V. THE MECHANISM OF DENDRITE CRYSTALLIZATION

|   |     |
|---|-----|
| A. Introduction .....   | 173 |
| B. Components of dendrites .....                                    | 174 |
| C. Stefan problem for dendrite growth.....                          | 176 |
| 1. Isothermal dendrite .....  | 176 |
| 2. Nonisothermal dendrite with optimization of growth rate .....    | 176 |
| 3. Nonisothermal dendrites with layer growth mechanism .....        | 180 |
| D. Experimental verification of the theory of dendritic growth .... | 182 |
| 1. Dendrite tip .....   | 182 |
| 2. Transition region .....  | 188 |
| 3. H-arm region .....   | 190 |
| E. The mechanism of dendrite formation from melts .....             | 191 |
| 1. Role of multiple twin planes .....                               | 191 |
| 2. Dendrites with three twin planes .....                           | 197 |
| 3. Dendrite nucleation .....  | 200 |
| F. The influence of impurities .....                                | 203 |
| G. Growth of dendrites from solutions .....                         | 203 |
| References .....  | 205 |

## Chapter VI. THE THEORY OF IONIC DISCHARGE IN THE RANGE OF LIMITING CURRENT AND THE QUANTUM MECHANISM OF POWDER FORMATION

|  |     |
|--|-----|
| A. Introduction .....  | 207 |
| 1. Adatoms and quasi-free atoms .....  | 207 |
| 2. Zero-charge complexes formed by electrochemical reactions .....                                     | 212 |
| 3. Primary and secondary electrode processes .....   | 216 |
| B. Quantum theory of ion discharge in the range of limiting current                                    | 217 |
| 1. Approximate $s$ - $\eta$ relation .....   | 218 |
| 2. The equation of current for a generalized barrier .....   | 219 |
| 3. The potential energy of free electron levels in solution .....                                      | 220 |
| 4. The equation of current and $s$ - $\epsilon$ relationship for a rectangular potential barrier ..... | 223 |
| 5. The equation of current and $s$ - $\epsilon$ relationship for a parabolic potential barrier .....   | 225 |

|  |     |
|--|-----|
| 6. The current equation and $s$ - $\varepsilon$ relationship without WKB approximation ..... | 227 |
| 7. Interpretation of calculations .....  | 231 |
| 8. Metal/thin layer/electrolyte solution interface .....                                     | 232 |
| 9. Thickness of tunneling through solid films .....  | 235 |
| References .....   | 236 |

## Chapter VII. COMPACT DEPOSITION AND FORMATION OF POWDER ON SOLID ELECTRODES

|   |     |
|---|-----|
| 1. Experimental methods .....   | 239 |
| 2. Formation of rough electrolytic deposits .....                               | 246 |
| 3. Formation of electrolytic powders as a function of electrode potential ..... | 251 |
| 4. The thermal effect of electrocrystallization of metallic powders .....       | 256 |
| 5. Current efficiency .....   | 262 |
| 6. Suppression of roughness .....   | 263 |
| References .....  | 264 |

## Chapter VIII. POTENTIAL OF DENDRITE FORMATION ON DROPPING MERCURY ELECTRODES

|  |     |
|--|-----|
| A. Amalgam formation .....   | 267 |
| B. Experimental methods .....  | 269 |
| 1. The dropping mercury electrode (DME) .....  | 269 |
| 2. The method of intensity-time curves ( $i-t$ ) .....   | 270 |
| 3. Microscopic observation and photography .....   | 270 |
| C. Experimental results .....  | 273 |
| 1. Influence of illumination upon formation of dendrites on DME ..                                 | 273 |
| 2. Potentials of formation of metallic powders on DME .....  | 274 |
| 3. Series of potentials of metallic powder formation on DME .....                                  | 281 |
| 4. Precipitation of hydroxides and formation of metallic dendrites in concentrated solutions ..... | 282 |
| 5. The $i-t$ curves in case of electrolytic powder formation .....                                 | 288 |
| 6. Processes on the hanging mercury drop .....   | 289 |
| 7. Whisker formation on DME .....  | 292 |
| References .....   | 292 |

## Chapter IX. CHARACTERISTICS AND STRUCTURE OF ELECTROLYTIC POWDERS

|   |     |
|---|-----|
| 1. Dimensions and granulometric distribution of electrolytic powders .. | 294 |
| 2. Specific surface .....   | 296 |
| 3. The volumetric mass .....  | 297 |
| 4. The activity of electrolytic powders .....                           | 298 |
| 5. The oxide and anion content .....                                    | 299 |
| 6. Microscopic and ultramicroscopic determinations .....                | 303 |

|   |     |
|---|-----|
| 7. Electrochemical properties of disperse cathodic deposits ..... | 306 |
| 8. Measurements with the scanning electron microscope .....       | 306 |
| 9. Deposition on a disc electrode .....                           | 308 |
| References .....  | 309 |

#### Chapter X. FRIABLE AND SPONGY DEPOSITIONS AT LOW CURRENT DENSITIES

|  |     |
|--|-----|
| 1. The mechanism of formation of friable cathodic deposits .....                         | 312 |
| 2. The mechanism of formation of spongy cathodic deposits at low current densities ..... | 316 |
| References .....   | 321 |

#### Chapter XI. MECHANISM OF FORMATION OF ELECTROLYTIC POWDERS AT HIGH CURRENT DENSITY

|   |     |
|---|-----|
| A. Introduction .....   | 322 |
| 1. Formation of powders as a result of depletion of the cathodic film ..... | 323 |
| 2. Powder formation as a result of discharge of complex ions ....           | 325 |
| 3. Formation of powders as a result of secondary reduction with hydrogen    | 326 |
| B. The mechanism of dendrite crystallization .....                          | 326 |
| References .....  | 329 |

### Part II

## ELECTRODEPOSITION OF POWDERS FROM SOLUTIONS

#### Chapter XII. COPPER

|   |     |
|---|-----|
| 1. Electrolytes for copper powder deposition .....    | 333 |
| 2. Current efficiency and energy consumption .....    | 338 |
| 3. Washing, drying and storage of copper powder ..... | 339 |
| 4. Equipment and technology .....                     | 340 |
| References .....                                      | 342 |

#### Chapter XIII. SILVER

|   |     |
|---|-----|
| 1. Electrolytes based on silver nitrate .....   | 345 |
| 2. Silver sulphate electrolytes .....           | 346 |
| 3. Electrolytes based on fluosilicic acid ..... | 346 |
| 4. Other electrolytes .....                     | 346 |
| References .....                                | 347 |

## Chapter XIV. GOLD, PLATINUM, PALLADIUM, BISMUTH

|                    |     |
|--------------------|-----|
| 1. Gold .....      | 348 |
| 2. Platinum .....  | 348 |
| 3. Palladium ..... | 349 |
| 4. Bismuth .....   | 349 |
| References .....   | 349 |

## Chapter XV. LEAD AND TIN

|                                |     |
|--------------------------------|-----|
| A. Lead .....                  | 350 |
| 1. Alkaline electrolytes ..... | 350 |
| 2. Acidic electrolytes .....   | 351 |
| B. Tin .....                   | 352 |
| References .....               | 354 |

## Chapter XVI. ZINC AND CADMIUM

|   |     |
|---|-----|
| A. Zinc .....   | 355 |
| 1. Influence of impurities .....                                      | 355 |
| 2. Electrolytes for zinc powder deposition .....                      | 356 |
| 3. Current efficiency and properties of electrolytic zinc powder .... | 357 |
| 4. Details of industrial production .....                             | 359 |
| B. Cadmium .....  | 359 |
| 1. Influence of metallic cations .....                                | 360 |
| 2. Electrolytes for the deposition of cadmium powder .....            | 360 |
| References .....  | 361 |

## Chapter XVII. IRON

|   |     |
|---|-----|
| 1. Historical outline of iron electrodeposition ..... | 364 |
| 2. Electrolytes for the recovery of iron powder ..... | 365 |
| 3. Technological data .....                           | 371 |
| References .....                                      | 374 |

## Chapter XVIII. NICKEL

|   |     |
|---|-----|
| 1. Electrolytes for disperse nickel deposition .....    | 377 |
| 2. Electrorecovery of nickel flakes .....               | 381 |
| 3. Current efficiency of nickel powder deposition ..... | 382 |
| 4. The activity of nickel powder .....                  | 384 |
| 5. Technical data .....                                 | 385 |
| References .....  | 386 |

## Chapter XIX. OTHER METALS

|                    |     |
|--------------------|-----|
| 1. Cobalt .....    | 387 |
| 2. Chromium .....  | 387 |
| 3. Manganese ..... | 387 |
| 4. Arsenic .....   | 388 |
| 5. Antimony .....  | 388 |
| 6. Tellurium ..... | 388 |
| References .....   | 389 |

## Chapter XX. ELECTRODEPOSITION OF METALS AS COLLOIDAL DISPERSION

|   |     |
|---|-----|
| 1. Introduction .....                           | 390 |
| 2. Zinc and cadmium organosols in toluene ..... | 392 |
| 3. Lead organosols in xylene .....              | 393 |
| 4. Nickel and iron organosols in xylene .....   | 394 |
| 5. Organosols of Pb-Sn alloy .....              | 395 |
| 6. Organosols of Ni-Cr alloy .....              | 396 |
| 7. Ni-Fe alloy organosols .....                 | 397 |
| 8. Equipment for industrial electrolysis .....  | 397 |
| References .....                                | 398 |

## Part III

## ELECTRODEPOSITION OF POWDERS FROM MELTS

## Chapter XXI. TITANIUM

|   |     |
|---|-----|
| 1. Electrolysis of titanium oxides .....                          | 402 |
| 2. Electrolysis of titanium halides .....                         | 406 |
| 3. Electrolysis of fluotitanates .....                            | 413 |
| 4. Equipment for electrorecovery of titanium powder from melts .. | 421 |
| References .....  | 424 |

## Chapter XXII. ZIRCONIUM

|  |     |
|--|-----|
| 1. Electrolysis of the $K_2ZrF_6$ —NaCl system .....       | 428 |
| 2. Electrolysis of $K_2ZrF_6$ —KCl system .....            | 433 |
| 3. Recovery of metal from the cathodic deposit .....       | 437 |
| 4. Purity of electrolytic zirconium .....                  | 438 |
| 5. Electrolytic separation of zirconium from hafnium ..... | 440 |
| 6. Properties of electrolytic zirconium .....              | 443 |
| 7. Devices for electrorecovery of metallic zirconium ..... | 446 |
| References .....   | 455 |

## Chapter XXIII. URANIUM

|   |     |
|---|-----|
| 1. Fused electrolytes for electrodeposition of uranium powder ..... | 456 |
| 2. The cathodic deposit and recovery of metal .....                 | 459 |
| 3. Purity of electrolytic uranium .....                             | 459 |
| 4. Equipment and production .....                                   | 460 |
| 5. Evolution of electrolytic uranium industrial production .....    | 461 |
| References .....  | 461 |

## Chapter XXIV. THORIUM

|  |     |
|--|-----|
| 1. Electrolytes for deposition of thorium powders from melts ..... | 463 |
| 2. Processing of the cathodic deposit .....                        | 469 |
| 3. Purity and properties of electrolytic thorium .....             | 470 |
| 4. Equipment for electrolysis. ....                                | 473 |
| References .....   | 474 |

## Chapter XXV. MOLYBDENUM

|  |     |
|--|-----|
| 1. Static and dynamic potentials of molybdenum in melts .....      | 475 |
| 2. Electrolytes for deposition of molybdenum .....                 | 478 |
| 3. Purity and properties of electrolytic molybdenum deposits ..... | 481 |
| References .....   | 482 |

## Chapter XXVI. BORON

|   |     |
|---|-----|
| 1. Electrolytes for deposition of boron ..... | 483 |
| 2. Electrolysis and working conditions .....  | 484 |
| 3. Processing of the cathodic deposit .....   | 486 |
| 4. Purity of electrolytic boron .....         | 486 |
| 5. Equipment for electrolysis .....           | 488 |
| References .....                              | 489 |

## Chapter XXVII. NIOBIUM AND TANTALUM

|  |     |
|--|-----|
| 1. Molten electrolytes for deposition of niobium and tantalum.....                       | 490 |
| 2. Working parameters, efficiencies, results .....                                       | 493 |
| 3. Anodic electrolysis products .....  | 496 |
| 4. Separation and washing of metallic powder .....                                       | 496 |
| 5. The purity of electrolytic tantalum and niobium powders .....                         | 497 |
| 6. The properties of electrolytic tantalum and niobium powders ....                      | 498 |
| 7. Comparison of electrolytic tantalum with tantalum recovered by<br>other methods ..... | 500 |
| 8. Equipment for electrolysis .....  | 501 |
| References .....   | 501 |

## Chapter XXVIII. OTHER ELEMENTS

|                   |     |
|-------------------|-----|
| 1. Tungsten ..... | 503 |
| 2. Vanadium ..... | 503 |
| 3. Silicon .....  | 503 |
| References .....  | 504 |

Chapter XXIX. POWDER DEPOSITION FROM MELTS AS A  
METHOD OF ELECTROLYTIC REFINING OF METALS

|                               |     |
|-------------------------------|-----|
| 1. Titanium .....             | 505 |
| 2. Vanadium .....             | 514 |
| 3. Beryllium .....            | 514 |
| 4. Chromium .....             | 514 |
| 5. Zirconium .....            | 515 |
| 6. Hafnium .....              | 515 |
| 7. Tantalum and niobium ..... | 516 |
| 8. Uranium .....              | 517 |
| 9. Plutonium .....            | 517 |
| 10. Refining cells .....      | 523 |
