<i>Preface</i>	ix
General remarks	xi
List of the more important symbols	xi
Crystallographic notation	xii
The use of B in preference to H	xii
Units	xiii
Numbering of equations and diagrams	xiii
References and cross-references	xiii
1 Survey of Basic Principles	1
The free-electron gas shows no magnetoresistance	3
The magnetoconductivity and magnetoresistivity tensors	5
Magnetoresistance in real metals	8
Dynamics of an electron	13
Historical note	18
Effective path and DC conductivity	19
Comments on the conductivity formula	22
1 Application to a free-electron gas with catastrophic scattering	22
2 Kohler's rule	23
3 The magnetoresistance is normally positive	24
4 Onsager's reciprocal relations	26
5 Hall effect in a strong field	27
Elementary extensions of the free-electron theory	28
1 Electrons and holes	28
2 Anisotropic scattering	31
3 Anisotropy of effective mass	34
Square Fermi surface with constant relaxation time	35

2	Measurement	40
	Field equations	41
	Current jetting	43
	Matchstick sample in a transverse field	47
	Sample imperfection – inhomogeneity	51
	Voids	53
	Thermal magnetoresistance and the Righi–Leduc effect	59
	Electrodeless methods	61
	1 Eddy current decay	62
	2 Helicons	63
	3 Soft helicons	66
	The low-frequency susceptibility of a sphere	69
	Experimental applications of rotating field/sphere	70
3	Real Metals	77
	Low-field magnetoresistance	77
	Calculation of the low-field coefficients	81
	Survey of basic ideas	85
	Typical Fermi surfaces	91
	Varieties of orbit	99
	The high-field limit	104
	1 Closed orbits	105
	2 Extended and open orbits	107
	Quantitative aspects of high-field magnetoresistance	113
	1 Closed orbits	113
	2 Extended orbits	117
	3 Longitudinal–transverse coupling	120
	4 Longitudinal magnetoresistance	121
	Small-angle scattering	125
4	Quantum Effects	132
	The free electron in a uniform magnetic field	132
	Orbit quantization	134
	Gauge transformations	136
	The assembly of quantized orbits	141
	The Shubnikov–de Haas effect	147
	Magnetic breakdown	153
	The network model	155
	The incoherent hexagonal network	157
	Local coherence on the hexagonal network	161
	The fully coherent network	163

<i>Contents</i>	vii
The status of the theory	171
Other examples of magnetic breakdown	173
1 The linear network in tin	173
2 Magnetic breakdown in aluminium	174
3 Interferometer oscillations	175
4 Magnetic breakdown and Shoenberg interaction in beryllium	176
5 Inhomogeneous Materials	178
Polycrystals	178
Effective medium theory	182
Potassium	186
Last thoughts on linear magnetoresistance	194
6 Size Effects	196
Size effects without a magnetic field	197
Size effects in the presence of a magnetic field; $\mathbf{B} \parallel \mathbf{J}$	200
Transverse magnetoresistance with \mathbf{B} lying in the plate	202
The Sondheimer and related effects	212
Electron focussing	220
Quantum effects in very small wires and rings	227
<i>References</i>	237
<i>Index of names</i>	246
<i>Index of subjects</i>	250
