

CONTENTS

MACROSCOPIC POTENTIALS, BIFURCATIONS AND NOISE IN DISSIPATIVE SYSTEMS	R. GRAHAM
1. Introduction	1
2. Macroscopic potentials	5
3. Noise in Josephson junctions	14
4. Codimension two bifurcations and noise	21
5. Lorenz attractor and noise	26
DYNAMICS OF TOPOLOGICAL DEFECTS IN FIRST ORDER PHASE TRANSITIONS	J.D. GUNTON
1. Introduction	35
2. Pattern formation	36
3. Extensions of Lifshitz-Slyozov theory	40
4. Dynamics of interfaces for model A	41
5. Interface equations for binary fluids and binary alloys	42
6. Dynamics of topological defects in the clock model	44
7. Theoretical calculations of the scattering intensity for binary fluids and binary alloys	46
8. Real space renormalization group theory	48
AN INTRODUCTION TO PATTERN FORMATION IN NONEQUILIBRIUM SYSTEMS	P.C. HOHENBERG M.C. CROSS
1. Introduction	56
2. Basic features of pattern formation	57
3. Real patterns	75
4. Conclusion	89
THE STATISTICAL MECHANICS OF POLYMER MELTS AND GLASSES	S.F. EDWARDS
1. Introduction	93
2. Polymer problems as field problems	94
3. The polymer melt	97
4. Viscoelasticity	102
5. The onset of the glass phase	107
ON THE REPLICA SYMMETRIC ISING SPIN GLASSES	C. DE DOMINICIS P. MOTTISHAW
1. A toy model	123
2. General bond distribution	128
CONFORMAL INVARIANCE AND FINITE SIZE EFFECTS IN CRITICAL TWO DIMENSIONAL STATISTICAL MODELS	C. ITZYKSON
1. Preliminaries	145

VI

2. Free fields - Gaussian and ising models	158
3. Modular invariant partition functions	167
GENERALIZED NON LINEAR σ -MODEL AND EFFECTIVE LANDAU THEORY FOR DISORDERED INTERACTING ELECTRON SYSTEMS	C. CASTELLANI C. DI CASTRO G. STRINATI
1. Introduction	176
2. The non linear σ -model	177
3. Renormalization parameters and the Landau theory of normal Fermi liquid	181
4. Discussion and conclusion	192
RELATIONSHIP BETWEEN D-DIMENSIONAL MODELS WITH LANGEVIN DYNAMICS, ASSOCIATED QUANTUM SYSTEMS AND (D+1)-DIMENSIONAL CLASSICAL AND STATIC MODELS	T. SCHNEIDER
1. Introduction	199
2. Sketch of the basic formalism	201
3. Relationship between dynamic, quantum and classical critical phenomena	207
4. Relationship between classical diffusion, $1/\omega$ -noise and the motion of a quantum particle in random media	213
PHASE TRANSITIONS AND STATIONARY NONEQUILIBRIUM STATES	J. MARRO
1. Introduction	227
2. Stationary states	228
3. One-dimensional systems	233
4. Some standard examples	242
5. Fast ionic conductors	244
6. Further examples on a lattice	250
QUANTUM MECHANICAL CHAOS CRITERIA FOR A KICKED TOP	F. HAAKE M. KUŚ R. SCHARF
1. Introduction	259
2. The evolution operator and its symmetries	261
3. Classical chaos on the sphere	265
4. Regular versus erratic quasiperiodicity	267
5. Quantum beats versus broad-band excitation	270
6. Level repulsion	272
SHORT RANGE SPIN GLASSES AT LOW TEMPERATURES	A. BOVIER
	277

VII

DIFFUSION IN FULLY DEVELOPED TURBULENCE	S. GROSSMANN	
A RANDOM WALK ON A FRACTAL STRUCTURE		
1. Introduction		287
2. Turbulent diffusion		289
3. Eddy energy		293
4. Hierarchy		298
5. Diffusion and correlation		306
MULTIFRACTAL WAVEFUNCTION AT THE LOCALIZATION THRESHOLD	C. CASTELLANI	
1. Introduction		315
2. Fractals and multifractals		316
3. Multifractals and critical phenomena		322
4. Multifractal structure of the wavefunction near the mobility edge		324
5. Conclusion		331
EFFECTS OF SCREENING IN LIQUID CRYSTAL POLYMERS	A. TEN BOSCH P. MAÍSSA	
1. Introduction		333
2. Free energy of mixing		334
3. Chain model-mean field theory		337
4. Screened potential		343
5. Effective interaction parameters		345
6. End-to-end distance		346
7. Elastic constants		347
LOCALIZATION, QUANTUM INTERFERENCE AND TRANSPORT IN DISORDERED SOLIDS	B. KRAMER M. SCHREIBER	
1. Introduction		351
2. Description of the scaling theory		358
3. Numerical test of the scaling hypothesis		361
4. Results		367
5. Open questions		374
ON THE COMPUTATIONAL COMPLEXITY OF COMPOSITE SYSTEMS	A.W.M. DRESS	
1. Introduction		377
2. The interaction scheme of a composite system		378
3. The tree width of an interaction scheme		381
4. An algorithm for the computation of the ground state of a finite spin glass system and of its degeneracy		383
5. An algorithm for the computation of the free energy of a finite spin glass system		386
6. Discussion		386

VIII

DISSIPATIVE QUANTUM TUNNELING	H. GRABERT
1. Introduction	389
2. Euclidean action of a damped system	393
3. The crossover temperature T_0	394
4. Above T_0 : Thermal hopping	396
5. Near T_0 : The crossover region	399
6. Below T_0 : Tunneling transitions	404
7. Conclusions	408
