1	Elastic Properties	1		
	<i>(H. M. Ledbetter)</i>			
1.1	Introduction	1		
	1.1.1 Theoretical résumé	1		
1.2	Definitions and Descriptions of Elastic Constants	3		
	1.2.1 Compressibility . . .	3		
	1.2.2 Bulk modulus	4		
	1.2.3 Young's modulus . .	4		
	1.2.4 Shear modulus	5		
	1.2.5 Poisson's ratio	6		
	1.2.6 Hooke's law	6		
1.3	Elastic-Constant Measurement Methods	7		
1.4	Typical Elastic-Constant Values	7		
1.5	Elastic-Constant Inter- relationships	10		
	1.5.1 Connecting identities	10		
	1.5.2 Differential inter- relationships	11		
	1.5.3 Empirical inter- relationships	12		
	1.5.4 Adiabatic-isother- mal differences	13		
1.6	Relationships Between Elastic Constants and Other Physical Properties	15		
	1.6.1 Thermodynamic potentials	15		
	1.6.2 Higher-order energy terms	15		
	1.6.3 Elastic Debye temperature	18		
	1.6.4 Grüneisen parameter	19		
	1.6.5 Lattice dynamics and interatomic force constants	22		
	1.6.6 Specific heat	22		
	1.6.7 Thermal expansivity	23		
	1.6.8 Miscellaneous relationships	23		
1.7	Elastic-Constant Changes with Temperature	24		
	1.7.1 Observed regular behavior	24		
	1.7.2 Theoretical studies	26		
	1.7.3 Linear-chain model	27		
	1.7.4 Semiempirical models	27		
	1.7.5 Varshni model	28		
	1.7.6 Recent studies	29		
1.8	Elastic Constants at Low Temperatures	30		
1.9	Other Elastic-Constant Topics	32		
	1.9.1 Magnetic materials	32		
	1.9.2 Structural phase transitions	32		
	1.9.3 Polymers	32		
	1.9.4 Composites	35		
	1.9.5 Textured aggregates	36		
	1.9.6 Other-phenomena correlations	36		
1.10	Concluding Remarks	36		
1.11	Appendix. Calculation of the Bulk Modulus	38		
1.12	References	38		

2 Specific Heat 47
(L. L. Sparks)

2.1 Introduction 47
 2.1.1 Definition 47
 2.1.2 Historical Background 48
 2.1.3 Scope 49
 2.2 Basic Concepts 49
 2.2.1 Thermodynamic relationships 49
 2.2.2 Lattice specific heat 51
 2.2.3 Electronic specific heat 55
 2.2.4 Specific heat contributions from transitions and defects 56
 2.2.5 Total specific heat 61
 2.3 Specific Heat Data 63
 2.3.1 Data base 63
 2.3.2 Predicting specific heats 64
 2.3.3 Specific heat of selected nonmetallic materials 67
 2.4 Methods of Measurement 69
 2.5 References 71

3 Thermal Expansion .. 75
(A. F. Clark)

3.1 Introduction 75
 3.1.1 Needs for thermal expansion data ... 75
 3.1.2 Principal behavior and terminology. . 77
 3.1.3 General material behavior 78
 3.2 Thermal Expansion Theory 79
 3.2.1 Thermodynamic relationships 81
 3.2.2 Lattice vibrations. . 81
 3.2.3 Electronic and magnetic contributions 82
 3.2.4 Other effects and methods 83

3.3 Methods of Measurement. . 85
 3.3.1 Mechanical methods 86
 3.3.2 Electrical methods . 88
 3.3.3 Optical methods. . 90
 3.3.4 X-ray methods 92
 3.3.5 Analysis of experimental data . 92
 3.4 Thermal Expansion Data. . 94
 3.4.1 Metals and alloys. . 94
 3.4.2 Nonmetallics 100
 3.4.3 Composites 103
 3.4.4 Standard reference materials 104
 3.5 Sources and Uses of Data. . 105
 3.5.1 Predicting thermal expansion 105
 3.5.2 Application of thermal expansion data 109
 3.5.3 Sources of data ... 112
 3.6 Appendix: Standard Reference Material Certificates 114
 3.7 References 128

4 Thermal Conductivity and Thermal Diffusivity 133
(J. G. Hust)

4.1 Introduction 133
 4.1.1 Purpose 133
 4.1.2 Scope 134
 4.2 Basic Concepts 134
 4.2.1 Heat transport 136
 4.2.2 Heat conduction and thermal diffusion 137
 4.2.3 Electronic conduction 137
 4.2.4 Lattice conduction. 140
 Measurement Methods 141
 4.3.1 Operational definitions and experimental techniques . 141
 4.3.2 Thermal conductivity apparatus 144

4.3.3	Thermal diffusivity apparatus	145
4.4	Selected Experimental Observations	146
4.4.1	Pure metals and dilute alloys	147
4.4.2	Nondilute alloys	151
4.4.3	Nonmetals	152
4.5	Empirical Correlations	154
4.5.1	Wiedemann-Franz-Lorenz law	155
4.5.2	Matthiessen's rule	156
4.5.3	Low-temperature correlation	156
4.6	Predictive Techniques	157
4.6.1	Pure metals and dilute alloys	157
4.6.2	Structural alloys	158
4.6.3	Nonmetals	158
4.7	Sources of Data	158
4.8	References	160

5 Electrical Properties 163

(F. R. Fickett)

5.1	Introduction	163
5.2	Experimental Techniques and Considerations	165
5.2.1	Direct current measurements	166
5.2.2	Alternating current measurements	166
5.2.3	Eddy current method	166
5.2.4	Low-level measurements	167
5.2.5	Additional considerations	167
5.3	Pure Metal Resistivity	170
5.3.1	Intrinsic resistivity	170
5.3.2	The effect of impurities	172
5.3.3	Defect resistivity	176
5.3.4	Size effects	178
5.4	Alloy Resistivity	179
5.4.1	Well-behaved alloys	179
5.4.2	Alloys with ordering and amorphous alloys	181

5.4.3	Alloys with phase transitions or precipitation	182
5.4.4	Magnetic alloys	182
5.4.5	Zero-temperature-coefficient alloys	183
5.5	External Resistive Mechanisms	185
5.5.1	Magnetoresistance	185
5.5.2	Hall effect	186
5.5.3	Pressure effect	187
5.5.4	Stress and fatigue	188
5.6	AC Resistivity	189
5.6.1	The skin effect — classical and anomalous	189
5.6.2	Eddy currents and magnetic diffusivity	190
5.6.3	Dielectrics	192
5.7	Low-Temperature Electrical Properties of Specific Metals and Alloys	193
5.7.1	Conductors	194
5.7.2	Structural alloys	195
5.7.3	Other materials	196
5.8	References	196

6 Magnetic Properties 203

(F. R. Fickett and R. B. Goldfarb)

6.1	Introduction	203
6.2	Properties of Magnetic Materials	203
6.2.1	Terms and units	203
6.2.2	Types of magnetic behavior	206
6.2.3	Effects of the magnetic transformations	217
6.2.4	Unique properties of magnetic materials	219
6.3	Measurement Techniques	223
6.3.1	Production and measurement of magnetic fields	224
6.3.2	Magnetic measurements	225

	6.3.3	Combined effect measurements	227
6.4		Experimental Results	228
	6.4.1	Well-behaved, highly magnetic metals	228
	6.4.2	Well-behaved, slightly magnetic metals	228
	6.4.3	Metals with magnetic inclusions	229
	6.4.4	Metallic glasses	230
	6.4.5	Permanent magnet materials	232
	6.4.6	Nonmagnetic materials	232
6.5		References	233

7 Mechanical Properties 237
(*D. T. Read*)

7.1		Introduction	237
7.2		Temperature Dependence of Strengthening and Flow.	237
	7.2.1	Basic mechanism of plastic flow in crystalline solids.	238
	7.2.2	Thermal and athermal contributions to strength	240
	7.2.3	Crystal structure effects	241
	7.2.4	Strain hardening.	242
	7.2.5	Solution strengthening	244
	7.2.6	Athermal strengthening by grain boundaries and precipitates	245
	7.2.7	Strain-rate effects	246
7.3		Tensile Properties	247
	7.3.1	Serrated stress-strain curves	248
	7.3.2	Twinning	248
	7.3.3	Martensitic transformations.	249

	7.3.4	Anomalous yield-strength temperature dependence	249
	7.3.5	Yield points	250
	7.3.6	Cottrell-Stokes Law	251
	7.3.7	Work softening	252
7.4		Toughness, Fatigue, and Creep	252
	7.4.1	Toughness	252
	7.4.2	Fatigue	254
	7.4.3	Creep	255
7.5		Engineering Metals and Alloys	256
	7.5.1	Copper and copper alloys	256
	7.5.2	Aluminum and aluminum alloys.	257
	7.5.3	Austenitic stainless steels	257
	7.5.4	Titanium and titanium alloys	259
	7.5.5	Iron and b.c.c. iron alloys	259
7.6		Polymers and Glasses	260
	7.6.1	Polymers	260
	7.6.2	Glass	262
7.7		Sources of Data	262
7.8		Author's Afterword	263
7.9		References	264

8 Fracture Mechanics 269
(*R. L. Tobler and H. I. McHenry*)

8.1		Introduction	269
8.2		Linear Elastic Fracture Mechanics	269
	8.2.1	The stress intensity factor	270
	8.2.2	Crack tip plasticity	270
	8.2.3	Size effect	270
	8.2.4	Summary	271
8.3		Elastic-Plastic Fracture Mechanics	271
	8.3.1	The crack opening displacement	271

	8.3.2	<i>J</i> -integral	272
	8.3.3	<i>R</i> -curves	272
	8.3.4	Summary	273
8.4		Fracture Toughness Testing	273
	8.4.1	Linear elastic fracture toughness	274
	8.4.2	<i>J</i> -integral fracture toughness	275
	8.4.3	Other test methods	275
	8.4.4	Specimens	276
	8.4.5	Apparatus	277
	8.4.6	Specimen orientation	277
	8.4.7	Loading rate	278
8.5		Thermal and Metallurgical Effects on Toughness	278
	8.5.1	Crystal structure	279
	8.5.2	Composition	280
	8.5.3	Processing	281
8.6		Fatigue Crack Growth	282
	8.6.1	Test methods	282
	8.6.2	Mechanical test variables	283
	8.6.3	Test environment	284
	8.6.4	Specimen orientation	284
	8.6.5	Fatigue life calculations	285
8.7		Temperature Dependence of Fatigue Crack Growth	285
	8.7.1	Stable f.c.c. alloys	285
	8.7.2	Austenitic stainless steels	286
	8.7.3	Ferritic steels	287
	8.7.4	Titanium alloys	287
8.8		Fracture Mechanics Behavior of Nonmetals	287
	8.8.1	Polymers	288
	8.8.2	Ceramics	288
	8.8.3	Composites	288
8.9		Fracture Prevention	288
	8.9.1	Storage tanks and piping systems	289
	8.9.2	Shipboard LNG tanks	289
	8.9.3	Aerospace pressure vessels	290
	8.9.4	Future applications	290

8.10	Sources of Information	290
8.11	References	290

9 Martensitic Phase Transformations 295

(R. P. Reed)

9.1	Introduction	295	
9.2	Characteristics	296	
	9.2.1	Nucleation	297
	9.2.2	Temperature dependence	298
	9.2.3	Time dependence	298
	9.2.4	Stress dependence	299
	9.2.5	Morphology and crystallography	300
9.3	Austenitic Stainless Steels	303	
	9.3.1	Austenite stability	303
	9.3.2	Structure	307
	9.3.3	Effects of temperature	309
	9.3.4	Effects of austenite deformation	309
	9.3.5	Effects on austenite deformation	309
	9.3.6	Influence on performance	312
9.4	Alkali Metals	313	
	9.4.1	Sodium	313
	9.4.2	Lithium	314
9.5	Solidified Gases	319	
	9.5.1	Hydrogen	319
	9.5.2	Oxygen	320
	9.5.3	Argon-nitrogen and argon-oxygen	320
9.6	Superconductors	320	
	9.6.1	Titanium-niobium	320
	9.6.2	Nb ₃ Sn	324
	9.6.3	Other A15-structure superconductors	327
9.7	Iron-Nickel Alloys	327	
	9.7.1	Crystallography and morphology	327
	9.7.2	Transformation temperatures	331
	9.7.3	Effects on mechanical properties	331

	9.7.4	Lattice parameters	333
9.8		Polymers	334
9.9		References	334
	9.9.1	Books, reviews, recent conferences .	334
	9.9.2	Characteristics	335
	9.9.3	Austenitic stainless steels	336
	9.9.4	Alkali metals	337
	9.9.5	Solidified gases . . .	338
	9.9.6	Superconductors. .	338
	9.9.7	Iron-nickel alloys. .	340
	9.9.8	Polymers	341

10 Compatibility of Materials with Cryogenics 343

(J. C. Moulder and J. G. Hust)

10.1	Introduction	343	
10.2	Compatibility of Materials with Liquid Oxygen	344	
	10.2.1	Metal ignition and combustion	344
	10.2.2	Ignition sources . . .	347
	10.2.3	Compatibility test methods	349
	10.2.4	Relative compatibility of metals	353
	10.2.5	Relative compatibility of nonmetals	355
	10.2.6	Design guidelines. .	356
10.3	Compatibility of Materials with Liquid Fluorine	357	
	10.3.1	Research on materials compatibility with liquid fluorine	358
	10.3.2	Compatibility of metals with liquid fluorine	358
	10.3.3	Compatibility of nonmetals with liquid fluorine	361
10.4	Hydrogen Embrittlement of Structural Materials	362	

	10.4.1	Types of embrittlement	364
	10.4.2	Hydrogen-environment embrittlement	365
	10.4.3	Selection of materials for hydrogen service. .	366
10.5		References	366

11 Structural Alloys 371

(H. I. McHenry)

11.1	Introduction	371	
11.2	Austenitic Stainless Steels. .	371	
	11.2.1	Metallurgy	372
	11.2.2	Annealed AISI 300-series grades. .	373
	11.2.3	Annealed nitrogen-strengthened grades	377
	11.2.4	High-strength cold-rolled sheet	380
	11.2.5	Fabrication characteristics	383
11.3	Nickel Steels	388	
	11.3.1	Metallurgy and heat treatment	389
	11.3.2	Properties of the nickel steels	390
	11.3.3	Fabrication characteristics	392
11.4	Aluminum Alloys	396	
	11.4.1	Metallurgy and heat treatment	397
	11.4.2	Properties of aluminum alloys. .	397
	11.4.3	Fabrication characteristics	401
11.5	Other Metals and Alloys. . .	403	
	11.5.1	Copper and copper alloys	404
	11.5.2	Nickel-base superalloys	404
	11.5.3	Titanium alloys	405
11.6	Summary	407	
11.7	References	407	

12 Composites 413 (M. B. Kasen)

12.1	Introduction	413
	12.1.1 Why composites? ..	413
	12.1.2 Composite systems and terminology ..	415
12.2	The Composite Approach ..	417
	12.2.1 Design and fabrication	417
	12.2.2 Composite failure ..	418
12.3	Material Overview	419
	12.3.1 High-pressure reinforced plastic laminates	419
	12.3.2 Low-pressure reinforced plastics ..	420
	12.3.3 Reinforced metals ..	423
	12.3.4 Selectively rein- forced structures ..	424
12.4	Effect of Cryogenic Temperatures	424
	12.4.1 General	424
	12.4.2 Woven-fabric and random-mat composites	425
	12.4.3 Uniaxial fiber- reinforced composites	434
12.5	Composite Joints in Cryogenic Structures	441
	12.5.1 General	441
	12.5.2 Joining techniques —room temperature experience	442
	12.5.3 Cryogenic experience	445
	12.5.4 Summary	450
12.6	Radiation Effects	451
12.7	Testing Laminates at Cryogenic Temperatures ..	452
	12.7.1 General	452
	12.7.2 Static and cyclic tensile testing	454
	12.7.3 Static and cyclic compression testing ..	456
	12.7.4 Interlaminar shear testing	457

	12.7.5 Secondary property tests	458
12.8	Concrete Aggregates	459
12.9	Summary	460
12.10	References	461

13 Superconductors 465 (J. W. Ekin)

13.1	Introduction	465
	13.1.1 Applications	465
	13.1.2 Scope	465
13.2	Critical Temperature	466
	13.2.1 Critical temperature values for practical materials	467
	13.2.2 Limits for critical temperature	467
	13.2.3 Measurement of critical temperature ..	468
13.3	Critical Magnetic Field	469
	13.3.1 Type I and Type II superconductors ..	470
	13.3.2 Upper critical field values for practical materials	471
	13.3.3 Temperature dependence of critical field and upper critical field ..	471
	13.3.4 Limits for upper critical field	472
	13.3.5 Measurement of critical field and upper critical field ..	472
13.4	Critical Current	472
	13.4.1 Critical current in Type I super- conductors	472
	13.4.2 Critical current in Type II super- conductors	473
	13.4.3 Limits for critical current density in Type II materials ..	474
	13.4.4 Critical current density values for practical materials ..	474
