Preface	
by G.C. Sih, S.T. Mileiko and A.J. Ishlinsky	xii
Portrait of Yuriy Nickolaevich Rabotnov	xii
Scientific biography of the late academician Yuriy Nickolaevich Rabotnov	
by A.J. Ishlinsky, S.T. Mileiko and G.C. Sih	xiii
1 Past and possible future directions in plasticity	
D.C. Drucker	
1.1 Introduction	1
1.2 The beginning of plastic stress-strain relations	3
1.3 Isotropic hardening as a next step	4
1.4 Computers and the very limited experimental information obtainable	5
1.5 The stability postulate for small displacements	7
1.6 Perfect plasticity and the limit theorems	7
1.7 Stress invariants and further remarks on idealization and reality	9
1.8 Finite elastoplasticity for small incremental displacements	10
1.9 On some future directions and other concluding comments	13
References	15
2 Physical theory of plasticity: a polycrystal model	
T.H. Lin and G.E. Ribeiro	
2.1 Introduction	19
2.2 Requirements of polycrystal model	20
2.3 Polycrystal model	21
2.4 Some numerical results using this model	23
2.5 Conclusions	26
References	28

3 Creep theories in metal forming	
N.N. Malinin	
3.1 Introduction	31
3.2 One-dimensional problems	34
3.3 Reduction from two to one dimension	40
3.4 Two-dimensional problems	50
3.5 Damage in metal forming	53
References	57
4 Failure of inelastic solids	
L.V. Nikitin and Sh.A. Mukhamediev	
4.1 Introduction	61
4.2 Load bearing capacity of an ideal elastic-plastic solid under plane strain	62
4.3 Stationary tensile crack in elastic-plastic material	70
4.4 Dynamics of longitudinal shear crack in elastic-plastic medium	75
4.5 Fracture of viscoelastic solids	79
4.6 Constitutive instability	83
References	88
5 Plastic deformation and crack growth behavior	
G.C. Sih and D.Y. Tzou	
5.1 Introduction	91
5.2 Classical theory of plasticity	92
5.3 Macroplastic deformation and crack growth	96
5.4 Inhomogeneous deformation: change in local strain rates	102
5.5 Limitations of plasticity and possible alternatives	109
References	112
6 Nonexistence of higher order discontinuities across elastic/plastic boundary in elastic-plastic wave propagation	
T.C.T. Ting	
6.1 Introduction	115
6.2 Basic equations for longitudinal waves in a thin rod	117
6.3 Discontinuities of first order	118
6.4 Discontinuities of second order at M , first order on Γ	121
6.5 Discontinuities of second order at M and on Γ	124
6.6 Discontinuities of third and higher order at M , first order on Γ	126
6.7 Discontinuities of third and higher order at M , second order on Γ	130

6.8	Impossibility of third and higher order discontinuities on Γ	132
6.9	Improbability of second and higher order discontinuities on a loading boundary	133
6.10	Concluding remarks	134
	References	135
7	Engineering mechanics of composites	
	A.M. Skudra and Yu.M. Tarnopol'skii	
7.1	Introduction	137
7.2	Visco-elastic properties of constituents	138
7.3	Creep of unidirectionally reinforced plastic	143
7.4	Creep of bidirectional reinforced plastics	152
7.5	Stress-rupture under sustained load	154
	References	163
8	Interaction of macro- and microcracks in a nonhomogeneous solid	
	S.T. Mileiko and V.V. Tvardovsky	
8.1	Introduction	167
8.2	Delamination of inclusion from matrix	169
8.3	Fibre/matrix delamination and stress-strain response	171
8.4	Fracture toughness	172
8.5	Conclusion	177
8.6	Appendix: Matrix/fibre interface fracture under longitudinal shear	178
	References	184
9	Energy balance for elastoplastic fracture: static and cyclic loading	
	A.N. Romanov and M.M. Gadenin	
9.1	Introduction	187
9.2	Energy balance	187
9.3	Heat conduction and generation	188
9.4	Static and cyclic loading	190
9.5	Local mechanical energy	192
9.6	Analytical method	195
9.7	Local thermal energy	195
	References	198

10 Stability of materials and structures

V.D. Klushnikov

10.1 Introduction	201
10.2 Stability of elastic-plastic structures	201
10.3 Stability of visco-elastic structures	204
10.4 Stability of a strip	206
10.5 Macroscopic material stability	209
References	210
