EDITORIAL .....	v
-----------------	---

**CHAPTER I — MICROSCOPIC FORMULATION OF  
THE FUNDAMENTAL INTERACTIONS. MAGNETIC  
STATES IN INSULATORS, SEMICONDUCTORS  
AND METALS .....**

1

*G. Amoretti*

**CRYSTAL FIELD AND EXCHANGE INTERACTION  
FOR MAGNETIC IONS IN SOLIDS .....**

3

1. The Free Ion .....	3
1.1 The central field approximation .....	3
1.2 The perturbation potentials .....	6
2. The Ion in a Crystal .....	11
2.1 The crystal field .....	11
2.2 The ion in weak, intermediate and strong crystal field .....	13
2.3 The Kramers theorem and its consequences .....	16
3. The Crystal Field Theory .....	17
3.1 The expansion of the crystal potential .....	17
3.2 The operator equivalents method .....	20
3.3 The splitting of the f states .....	31
4. The Calculation of the Physical Observables .....	39
4.1 Magnetic moments and magnetization — Spectroscopic splitting factor .....	39
4.2 The Van Vleck magnetic susceptibility .....	48
4.3 Hyperfine field and nuclear quadrupole splitting .....	54
4.4 Schottky specific heat and entropy .....	61
5. The Exchange Interaction and the Spin Hamiltonian .....	65
5.1 The hydrogen molecule and the polar states .....	65
5.2 Generalization to the case of complex ions — Direct exchange and superexchange .....	77
5.3 The Heisenberg-Dirac Hamiltonian — The molecular field approximation .....	83

5.4 The spin Hamiltonian for the magnetically dilute systems – The anisotropic and the antisymmetric exchange . . . . .	92
References . . . . .	105

ITINERANT ELECTRON THEORY OF MAGNETIC INTERACTIONS . . . . .	109
---	-----

Introduction – Motivation for a Theory of Itinerant Magnetism . . . . .	109
---	-----

1. Magnetism in a Single Band: Low Correlation Case . . . . .	110
1.1 The Hubbard Hamiltonian . . . . .	110
1.2 The Hartree-Fock solution, and the SWE theory of ferromagnetism . . . . .	111
1.3 Survey of materials exhibiting spin density waves (SDW) . . . . .	118
1.4 Electronic structure in SDW phases . . . . .	119
2. Magnetism in a Single Band: Strong Correlation Case . . . . .	127
2.1 Why going beyond HFA . . . . .	127
2.2 The kinetic exchange (KE) Hamiltonian . . . . .	128
3. Magnetism in Degenerate Bands . . . . .	134
3.1 Additional interactions . . . . .	134
3.2 The low-correlation case . . . . .	135
3.3 The high-correlation case . . . . .	139
4. Coupling of Local Moments by Itinerant Electrons . . . . .	140
4.1 Classification of the relevant physical systems . . . . .	140
4.2 A model of indirect coupling . . . . .	142
References . . . . .	149

CHAPTER II – STATISTICAL MECHANICS OF THE MAGNETIC SYSTEMS . . . . .	154
---	-----

*U. Bahucani and A. Rastelli*

STATISTICAL MECHANICS OF MAGNETIC SYSTEMS . . . . .	156
1. Formalism . . . . .	156
1.1 Time correlation functions . . . . .	156
1.2 Green's functions . . . . .	160
1.3 Relaxation functions . . . . .	164
2. Magnetic Hamiltonian . . . . .	165

3.	Heisenberg Ferromagnets: Spin-Operator Approaches	167
3.1	The "Molecular Field" approximation	167
3.2	Spin waves: Physical consideration	170
3.3	Spin waves: Random-Phase-Approximation	171
4.	Heisenberg Ferromagnets: Boson Approaches	179
4.1	Spin-boson transformation	179
4.2	Boson approach for the Heisenberg Hamiltonian	180
5.	Non-Interacting Magnon Theory	183
5.1	Harmonic approximation	183
5.2	Low-temperature thermodynamic quantities	184
6.	Interacting Magnon Theory	188
6.1	Neutron scattering cross-section	188
6.2	Green function equation of motion	190
6.3	First order approximation: renormalization	191
6.4	Second order approximation: damping	194
7.	Antiferromagnetic and Helimagnetic Ordering	197
