| LIST OF CONTRIBUTORS         | vii |
| PREFACE                      | ix  |
| CONTENTS OF PREVIOUS VOLUMES | xi  |

### Microstructural Characterization of Thin Films

*Richard W. Vook*

|                                             |    |
|---------------------------------------------|----|
| I. Introduction                             | 1  |
| II. Fundamental Concepts of Diffraction     | 4  |
| III. Epitaxial Monocrystalline Films        | 10 |
| IV. Polycrystalline Films                   | 37 |
| V. Amorphous and Micropolycrystalline Films | 53 |
| References                                  | 54 |

### Lattice Diffusion of Substitutional Solutes and Correlation Effects

*J. P. Stark*

|                                                                    |     |
|--------------------------------------------------------------------|-----|
| I. Introduction                                                    | 59  |
| II. Fick's Laws                                                    | 60  |
| III. Nature of Diffusion                                           | 63  |
| IV. Useful Solution and Method                                     | 64  |
| V. Simple Kinetic Derivation of the Flux                           | 66  |
| VI. Random Walk and Diffusion                                      | 72  |
| VII. Vacancy-Solute Diffusion in an Infinitely Dilute fcc Solution | 77  |
| VIII. Concentration Dependence                                     | 87  |
| IX. Other Forces                                                   | 103 |
| References                                                         | 111 |

**Solid Solution Strengthening of Face-Centered Cubic Alloys***K. R. Evans*

|                                                          |     |
|----------------------------------------------------------|-----|
| I. Introduction                                          | 113 |
| II. The Structure of Solid Solution Alloys               | 115 |
| III. General Plastic Properties of Solid Solution Alloys | 126 |
| IV. Observations of Solid Solution Strengthening         | 136 |
| V. Interpretations of Solid Solution Strengthening       | 144 |
| References                                               | 168 |

**Thermodynamics and Lattice Disorder in Binary Ordered Intermetallic Phases***Y. Austin Chang*

|                                                                                                                 |     |
|-----------------------------------------------------------------------------------------------------------------|-----|
| I. Introduction                                                                                                 | 173 |
| II. Thermodynamics of Binary Ordered Phases with Antistructure Defects                                          | 178 |
| III. Binary Intermetallic Phases Exhibiting the CsCl-Type (B2) Structure                                        | 180 |
| IV. Binary Intermetallic Phases Exhibiting the Face-Centered Tetragonal AuCuI-Type (L1 <sub>0</sub> ) Structure | 219 |
| V. Binary Intermetallic Phases Exhibiting the Cubic Cu <sub>3</sub> Au-Type (L1 <sub>2</sub> ) Structure        | 232 |
| VI. Discussion                                                                                                  | 256 |
| References                                                                                                      | 258 |

**Metal Powder Processing***Michael J. Koczak and Howard A. Kuhn*

|                                            |     |
|--------------------------------------------|-----|
| I. Introduction                            | 262 |
| II. Powder Production and Characterization | 263 |
| III. Powder Compaction                     | 275 |
| IV. Sintering                              | 283 |
| V. Deformation Processing                  | 287 |
| VI. Applications                           | 314 |
| References                                 | 317 |
