PREFACE	ix
CONTENTS OF PREVIOUS VOLUMES	xi

Introduction

Robert H. Doremus

Text	1
References	3

Optical Absorption of Glasses

George H. Sigel, Jr.

I. Introduction	5
II. Ultraviolet Absorption	10
III. Visible Absorption	35
IV. Infrared Absorption	61
V. Summary	82
References	82

Photochromic Glass

Roger J. Araujo

I. Introduction	91
II. Homogeneous Glasses	92
III. Suspension of Crystallites in Glasses	96
IV. Glasses Containing Silver Halides	100
References	121

Anomalous Birefringence in Oxide Glasses

Takeshi Takamori and Minoru Tomozawa

I.	Introduction	123
II.	Definition and Experimental Method	124
III.	Single-Phase Glass and Birefringence by Frozen-in Strain	127
IV.	Glass-in-Glass Phase Separation and Birefringence by Frozen-in Strain	127
V.	Glass-in-Glass Phase Separation and Microstructural Birefringence	130
VI.	Crystallization and Optical Anisotropy	144
VII.	Chain Structure in Phosphate Glass and Birefringence	150
VIII.	Microporous Glass and Microstructural Birefringence	151
IX.	Summary and Conclusion	153
	References	154

Light Scattering of Glass

John Schroeder

I.	Introduction	158
II.	Theoretical Background	160
III.	Apparatus and Procedure	177
IV.	Results—Discussion	179
V.	Summary and Conclusion	216
	References	217

Resonance Effects in Glasses

P. Craig Taylor

I.	Introduction	223
II.	Analysis of Magnetic Resonance and Mössbauer Spectra	226
III.	ESR in Glasses	232
IV.	NMR in Glasses	255
V.	Mössbauer Spectroscopy in Glasses	272
VI.	Concluding Remarks	276
	References	278

Dielectric Characteristics of Glass

Minoru Tomozawa

I.	Introduction	283
II.	Basic Information	286
III.	Experimental Observations	294
IV.	Proposed Mechanisms	306
V.	Discussion	321
VI.	Summary	342
	References	342
	INDEX	347
