CONTENTS OF PREVIOUS VOLUMES	xv

Theories of Wear and Their Significance for Engineering Practice

F. T. Barwell

I. Introduction	2
II. Wear in Vacuum or Inert Gases	19
III. Wear in Air without Deliberate Lubrication	26
IV. Wear of Lubricated Systems	53
V. Elastohydrodynamic Conditions	58
VI. General Remarks	65
References	76

The Wear of Polymers

D. C. Evans and J. K. Lancaster

I. Introduction	86
II. Materials	87
III. Friction	91
IV. Wear Testing	94
V. Abrasion	97
VI. Fatigue	104
VII. Adhesion	108
VIII. Composites	115
IX. Lubrication	124
X. Applications	128
References	134

The Wear of Carbons and Graphites

J. K. Lancaster

I. Introduction	141
II. Materials	142
III. Friction	145
IV. Wear	152
V. Electrical Contacts	159
VI. Bearings and Seals	165
VII. Carbon–Carbon Combinations	167
VIII. Summary	170
References	171

Scuffing

A. Dyson

I. Introduction	176
II. Definitions	176
III. Physical Manifestations of Scuffing	177
IV. The Practical Importance of Scuffing	182
V. Factors Affecting Scuffing	185
VI. Empirical Criteria for Scuffing	188
VII. Screening Tests for Scuffing	198
VIII. The Mechanism of Scuffing	198
References	213

Abrasive Wear

Martin A. Moore

I. Introduction	217
II. Validity of a Simple Model of Abrasive Wear	221
III. Mechanisms of Material Removal	228
IV. Variables Influencing Abrasive Particle Contact	237
V. Concluding Remarks	253
References	253

Fretting

R. B. Waterhouse

I. Introduction	259
II. Effect of Variables	265
III. Fretting in Aqueous Electrolytes	274
IV. Mechanism of Fretting Wear	276
V. Preventive Measures	281

CONTENTS

vii

VI. Conclusion	284
References	285

Erosion Caused by Impact of Solid Particles

G. P. Tilly

I. Introduction	287
II. Types of Erosion Test	288
III. Aerodynamic Effects	292
IV. The Impacting Particles	295
V. The Impact Parameters	299
VI. The Target Material	306
VII. Mechanisms of Erosion	307
List of Symbols	317
References	317

Rolling Contact Fatigue

D. Scott

I. Introduction	321
II. Theoretical Considerations	322
III. Material Requirements for Rolling Elements	324
IV. Effect of Load and Geometry on Rolling Contact Fatigue	326
V. Effect of Material Properties on Rolling Contact Fatigue	327
VI. Effect of the Lubricant on Rolling Contact Fatigue	338
VII. Effect of Environment	341
VIII. Effect of Temperature	344
IX. Mechanism of Failure	345
X. Failure Detection	352
References	354

Wear Resistance of Metals

T. S. Eyre

I. Introduction	363
II. Wear in Industry	367
III. Surface Treatments Used to Reduce Wear	414
References	441

Wear of Metal-Cutting Tools

E. M. Trent

I. Introduction	443
II. Metal-Cutting Operations	444

III. Descriptive Treatment of Tool Wear Phenomena	446
IV. Conditions at the Tool/Work Interface	450
V. Cutting Tool Wear	464
VI. Interfacial Layers	483
VII. Other Tool Materials	486
References	488
INDEX	491
