

## Contents

LIST OF CONTRIBUTORS	ix
FOREWORD	xi
PREFACE	xv
CONTENTS OF PREVIOUS VOLUMES	xvii

### Introduction to Superconducting Materials

*David Dew-Hughes*

I. Phenomena and Applications of Superconductivity	1
II. Elementary Theories of Superconductivity	10
III. Irreversible Properties of Type II Superconductors	27
References	44

### Magnets, Motors, and Generators

*Per F. Dahl*

I. Introduction	47
II. Magnetic Design Considerations	49
III. Applications	65
References	96

### Metallurgy of Niobium–Titanium Conductors

*A. D. McInturff*

I. Introduction	99
II. The Niobium–Titanium System	100
III. Microstructure and Critical Current Density	102
IV. Theory of Flux Pinning in Niobium–Titanium Alloys	117

V. The Nb–Ti Conductors	120
References	135

## Physical Metallurgy of A15 Compounds

*David Dew-Hughes*

I. Introduction	137
II. Superconducting Critical Temperature $T_c$	142
III. Upper Critical Field $H_{c2}$	158
IV. Critical Current Density $J_c$	162
References	167

## Superconductivity and Electron Microscopy

*C. S. Pande*

I. Introduction	171
II. Transmission Electron Microscopy	173
III. Electron Microscopy of Niobium and Its Alloys	188
IV. Transmission Electron Microscopy of A15 Superconductors	191
V. Observation of Magnetic Flux Lines by Electron Microscopy	203
VI. Superconducting Lenses	207
VII. Conclusion	215
References	216

## Metallurgy of A15 Conductors

*Thomas Luhman*

I. Introduction	221
II. A15 Compound Stability	224
III. Conductor Processing Methods	231
IV. Relationships between Superconducting Properties and Microstructure in Bronze-Processed Conductors	240
V. Superconducting Critical Currents, Temperatures, and Magnetic Fields of Nb <sub>3</sub> Sn Wire Conductors under Tensile Strain	254
References	263

**Superconductors for Power Transmission***J. F. Bussière*

I. Introduction	267
II. Cable Designs and Superconductor Requirements	268
III. Bulk Critical Current of Type II Superconductors	278
IV. Surface Currents in Type II Superconductors	284
V. Theory of AC Losses in Type II Superconductors	296
VI. AC Losses of Pure Niobium	303
VII. AC Losses of Nb <sub>3</sub> Sn and Nb <sub>3</sub> Ge	309
References	322

**Metallurgy of Niobium Surfaces***M. Strongin, C. Varmazis, and A. Joshi*

I. Introduction	327
II. Impurities at Nb Surfaces	330
III. Superconducting Properties	339
References	346

**Irradiation Effects in Superconducting Materials***A. R. Sweedler, C. L. Snead, Jr.,  
and D. E. Cox*

I. Introduction	349
II. Elements	350
III. Body-Centered-Cubic Alloys	359
IV. Non-A15 Compounds	370
V. A15 Compounds	372
References	422

**Future Materials Development***David Dew-Hughes and Thomas Luhman*

I. Introduction	427
II. Development of Known Materials	428
III. The Possibility of New Superconductors with Higher $T_c$ 's	437
IV. Conclusions	442
References	445
