LIST OF CONTRIBUTORS	vii
PREFACE	ix
CONTENTS OF VOLUME 12	xi

Molecular Solubility and Diffusion

J. E. Shelby

I. Gas Solubility in Vitreous Materials	2
II. Solubility Models	9
III. Permeation and Diffusion Measurements	12
IV. Effect of Experimental Variables on Gas Mobility in Vitreous Materials	16
V. Effect of Glass Composition on Gas Mobility in Vitreous Materials	21
VI. Phase Separation and Crystallization	26
VII. Diffusion-Controlled Reactions	29
VIII. Theories for Molecular Diffusion	32
References	38

Chemical Durability of Glass

R. H. Doremus

I. Introduction	41
II. Reaction of Water with Glass: Some Experimental Methods and Results	42
III. Mathematical Model	48
IV. Comparison with Experimental Data	55
V. Influence of Composition on the Chemical Durability of Glass	57
VI. Weathering	61
VII. pH and Durability	62
VIII. Conclusions	67
References	67

Phase Separation in Glass*Minoru Tomozawa*

I. Introduction	71
II. Metastable Immiscibility Boundary	72
III. Kinetics of Phase Separation	85
IV. Effect of Phase Separation on Properties	95
V. Summary	109
References	110

Polishing, Lapping, and Diamond Grinding of Optical Glasses*Tetsuro Izumitani*

I. Introduction	115
II. Polishing Process	116
III. Lapping	154
IV. Diamond Grinding	164
References	171

Solder Glasses*Takeshi Takamori*

I. Introduction	173
II. Vitreous Solder Glasses	174
III. Devitrifiable Solder Glasses	209
IV. Solder Glass Composites	229
V. Applications	247
VI. Concluding Remarks	250
References	251

Radiation Effects in Glass*E. J. Friebele and D. L. Griscom*

I. Introduction	257
II. Intrinsic Defect Types	267
III. Effects of Radiation on the Optical Properties of Glass	301
IV. Kinetic Studies	335
References	346

INDEX	353
CONTENTS OF PREVIOUS VOLUMES	357
